Xcel's time of day tariffs don't help the customers, they just help xcel line their pockets with more money. These rates will severely impact our communities and cause more financial strain on the population who is already experiencing significant financial strain due to increasing costs of groceries and other necessities. Energy is a necessity and a public service, it should be treated as such, what is in the best interest of the public? Costs should remain affordable to the customers as we all need to stay warm in the winter and cool on hot days. This pricing strategy will minimally encourage people to shift various usage to off-peak time, while the majority of energy usage will remain the same. The time scales for all this are so ridiculous, people won't be able to easily shift heavy energy usage to WHEN THEY ARE ASLEEP?!?! Very few people will be able to shift energy usage to off peak times. A better way to encourage better energy consumption would be to more education to the consumer about how to be more sustainable with their energy usage.
