RE: REPLY COMMENTS
PROACTIVE GRID UPGRADE PROPOSAL
DOCKET NO. E002/M-25-142

Dear Ms. Bergman:

Northern States Power Company, doing business as Xcel Energy, submits these Reply Comments to the Minnesota Public Utilities Commission in response to Initial Comments filed on January 28, 2026 by the Environmental Law & Policy Center, Vote Solar, and Clean Energy Futures (collectively, ELPC/VS/CEF), Fresh Energy, the Minnesota Department of Commerce (Department), and the Office of the Attorney General (OAG) in accordance with the Commission's November 13, 2025 Notice of Comment Period.

We have electronically filed this document with the Minnesota Public Utilities Commission, and copies have been served on the parties on the attached service lists. Please contact Taige Tople at taige.d.tople@xcelenergy.com or me at brian.t.monson@xcelenergy.com if you have any questions regarding this filing.

Sincerely,

BRIAN MONSON
MANAGER, REGULATORY AFFAIRS

IN THE MATTER OF A COMMISSION
INQUIRY INTO A FRAMEWORK FOR
PROACTIVE DISTRIBUTION GRID
UPGRADES AND COST ALLOCATION FOR
XCEL ENERGY

DOCKET NO. E002/M-25-142

REPLY COMMENTS

INTRODUCTION

Northern States Power Company, doing business as Xcel Energy, submits these Reply Comments to the Minnesota Public Utilities Commission in response to Initial Comments filed on January 28, 2026 by the Environmental Law & Policy Center, Vote Solar, and Cooperative Energy Futures (collectively, ELPC/VS/CEF), Fresh Energy, the Minnesota Department of Commerce (Department), and the Office of the Attorney General (OAG) in accordance with the Commission's November 13, 2025 Notice of Comment Period. These Reply Comments address parties' feedback on Xcel Energy's initial proposal under the Commission-approved Proactive Distribution Grid Upgrade (PDGU) Framework.

The Initial Comments focused on the Company's first proactive upgrade proposal for the addition of a new distribution feeder in South Minneapolis to address forecasted loading concerns on feeder MDT077, which is served by the Midtown substation. Based on the Company's load forecasting, this feeder is expected to exceed its planned loading limit by 2034. The South Minneapolis area is a densely populated residential and commercial corridor, characterized by constrained rights-of-way, complex permitting requirements, and limited construction windows. These conditions make reactive, last-minute system upgrades particularly challenging and costly. As a result, this area is well suited for proactive planning, which can reduce future reliability risks, minimize customer disruption, and avoid more expensive emergency or short-notice solutions.

Four parties (ELPC/VS/CEF, Fresh Energy, OAG, and the Department) submitted

comments on the proposal. The OAG took no position on whether the proposed upgrade should be approved at this stage. The other parties recommended that the Commission decline to approve the proposed upgrade at this time – raising questions regarding timing, alternatives analysis, cost recovery, and forecasting – and instead encouraged the Company to repropose the project with its 2027 Integrated Distribution Plan (IDP).

The Company's proposal complies with the PDGU Framework, and it squarely meets the criteria for a proactive distribution upgrade project. The PDGU Framework is intended to introduce a paradigm shift in utility planning and regulatory oversight—one that moves beyond reactive, constraint-driven upgrades and toward forward-looking investments that avoid the higher costs and customer impacts that can result from last minute planning and execution. Because this is an entirely new paradigm, the most effective way to learn how it functions, identify where refinements may be needed, and build shared expectations is to begin using it now on a relatively small initial project, rather than deferring its application to later IDP cycles.

This proposal identifies an anticipated need, presents a forward-looking mitigation, and brings it to the Commission for consideration at a time when proactive action can help mitigate higher costs and higher impact interventions later. Moreover, the Company has intentionally selected a relatively small project—approximately \$4 million—as its first PDGU Framework proposal. This provides a measured, low-risk opportunity for the Company, stakeholders, and the Commission to gain experience with the new process, test its mechanics, and make procedural and analytical improvements informed by actual practice rather than theory.

Further, the Framework's modification request process thoughtfully allows for adjustments over time—particularly for projects like this one, where the Company has sufficient runway to continue monitoring and assessing the need and refining its proposal. This approach enhances transparency and gives all parties an opportunity to test the PDGU Framework in real time, with no adverse consequences.

We therefore disagree with the recommendations to defer this proposal to a future IDP cycle. Such deferral would run counter to the PDGU Framework's core intent and would delay the learning and refinement that this brand-new, paradigm-shifting Framework requires. Moving forward now—with this modest project and the thoughtful structure of the PDGU Framework—allows all parties to gain valuable experience with minimal risk.

The Company has invested considerable time and expertise to design a modest proposal that addresses emerging reliability risks, aligns with Commission direction,

and provides stakeholders with early transparency. Many of the issues raised by parties fall outside of the approved Framework. This raises concerns beyond this initial proposal and could unintentionally work against the Framework's goal of encouraging early identification and mitigation of system needs before costs increase and options narrow.

Approving this project now is in the public interest for the following reasons:

- **Framework Fit:** The proposal is a model proactive upgrade that identifies and addresses reliability and capacity needs emerging in the Framework's specified 6- to 10-year planning window in a constrained area and would advance a mitigation well before those constraints become urgent.
- **Procedural Compliance:** Our filing met all the PDGU Framework's requirements and applied the currently effective cost-share methodology.¹
- **Risk Mitigation & Ratepayer Protection:** Forward-looking planning reduces the likelihood of more costly and disruptive interventions in the future. If material conditions change—such as significantly different load forecasts or the emergence of a superior alternative—the PDGU Framework's modification request provisions ensure that any adjustments are made transparently and on the record, thereby protecting customers.
- **Timeliness & System Value:** Approving the proposal now preserves the planning window needed for efficient design and procurement, maintaining flexibility and minimizing costs. Delaying project approval would compress timelines, narrow viable alternatives, and increase execution risk, eroding the value of a proactive upgrade.

For these reasons, the Company respectfully requests the Commission to approve this proposal now under the PDGU Framework.

The remainder of these Reply Comments provide our high-level response to the specific requests, recommendations, and concerns raised by commenters.

COMMENTS

A. Cost Cap

The Commission's Notice sought comments regarding the type and amount of cost cap it should establish for total PDGU costs, consistent with Framework Requirement I.5 which states "the cost cap shall be determined as part of the Commission's first Proactive Distribution Upgrade Proposal decision." In this

¹ Any future Phase 2 changes would be implemented prospectively, consistent with the Framework.

section, we respond to the Department's recommended approach to an overall cost cap and propose an alternative for the Commission to consider.

In response to the Commission's Notice, the Department recommended a \$15 million cost cap on cumulative PDGU proposals. We agree with the Department in urging caution regarding a cost cap at this early stage of the PDGU Framework. Because this is the first proposal under a new and untested process, it is too soon to determine what types or scale of projects the Framework will ultimately need to accommodate. While a cost cap can protect customers, establishing an arbitrary \$15 million cap could unintentionally restrict the range of proactive investments the PDGU Framework is intended to support.

We believe it is premature to establish a fixed cost cap applicable to all future PDGU proposals, and that the Phase 2 discussions—where procedural refinements are expected—provide a helpful venue for evaluating whether and when a broader cost-cap structure may be necessary.

If, however, the Commission determines that a forward-looking cost cap must be established in this proceeding, we propose a mechanism tied to the scale of the Company's overall distribution system investment. A cap based on the total five-year capital budget reflected in the Integrated Distribution Plan—or on the average of multiple five-year budgets—would allow PDGU Framework investment levels to scale proportionally with system needs, available resources, and the size of the Company's broader distribution investment plan. A percentage-based method would also enhance transparency and predictability while maintaining strong Commission oversight and ensuring alignment with overall capital planning.

In summary, the Company recommends that the Commission defer establishing any overall PDGU cost cap until additional experience has been gained through PDGU Framework implementation and Phase 2 discussions. Alternatively, if the Commission concludes that an overall cap must be set now, we recommend a percentage-based approach tied to the Company's five-year IDP capital budgets, with specific parameters developed in Phase 2 through robust stakeholder engagement.

B. Customer Cost-Share Fee Methodology

The PDGU Framework currently in effect includes an established customer cost-share fee methodology, which the Company applied to its proposal. Several commenters, including Fresh Energy and OAG, note that the appropriate structure for the customer cost-share fee may ultimately depend on determinations made in the Commission's ongoing Phase 2 PDGU Framework efforts.

The Company recognizes that Phase 2 of the PDGU Framework is ongoing and that the Commission may adopt revised cost recovery or cost-allocation standards as part of that process. Should the Commission approve different cost recovery mechanisms in Phase 2, the Company will implement them on a prospective basis for all projects to which they apply. At this time, the Company requests the Commission to approve its proposed PDGU project with the currently-approved cost recovery methodology.

C. Non-Wires Alternatives Analysis

ELPC/VS/CEF and Fresh Energy recommend that the Company conduct a more comprehensive evaluation of non-wires alternatives (NWA) for this project, noting that additional review of demand-side resources and other non-wires solutions could clarify whether the proposed feeder upgrade could be deferred or modified.

We agree that, when applicable, an NWA analysis is an important component of evaluating potential PDGU Framework projects. However, due to the timing of the PDGU Framework's approval in relation to when the Company had to propose this project, it was not possible to include it in the 2025 NWA cycle. Because the project's estimated cost exceeds \$2 million, it is already scheduled for evaluation in the Company's 2026 NWA analysis, which will be included in our IDP Baseline Filing due November 1, 2026. For future PDGU Framework proposals, we expect to have a longer lead time that will allow us to incorporate an NWA analysis or provide a discussion of alternative mitigation measures—consistent with Requirement G.6.

Importantly, the absence of simultaneous NWA results does not prevent the Commission from approving this proposal. The PDGU Framework anticipates situations where project development and NWA analysis timelines do not align, and it provides clear procedures to ensure that cost-effective NWAs are not overlooked. If the 2026 NWA analysis identifies an option that is cost-equivalent or superior to the proposed upgrade, the Company would file a modification request under Requirement C.5. This ensures that the Commission retains full authority to direct a different mitigation path if warranted.

This sequencing also presents minimal risk. No irreversible commitments—such as detailed design or equipment procurement—are planned to begin until early 2027, after the 2026 NWA results are available. As a result, the Commission can approve this project now while maintaining the ability to pivot to an NWA solution if the forthcoming analysis demonstrates that doing so would better serve customers.

D. Requests for Specific Details

ELPC/VS/CEF and Fresh Energy requested additional project-specific details regarding construction timing, load-growth triggers, cost phasing, potential off-ramps, and permitting risks associated with the proposed proactive upgrade.

At this time, we can provide high-level information based on current planning assumptions. We note that the PDGU Framework was intentionally designed to support forward-looking, flexible planning, not to require utilities to produce fully engineered, construction-ready plans years in advance. The Company needs Commission approval before it undertakes any detailed engineering, scheduling, permitting analysis, or development of project-specific cost and risk information. These activities require significant resources, and it would not be prudent or reasonable to expend time and money engineering a project the Commission has not yet authorized. The Framework anticipates that project details will be refined after approval and that adjustments will be handled transparently through the modification request process should material conditions change.

While the project is not yet included in the Distribution budget, we are planning to incorporate it during the annual budget creation process in Q2. At this time, we anticipate funding in 2027 and 2028, with construction timing dependent on several variables – including pre-permitting activities and material procurement. Should the Commission approve our proposal, we expect we would begin detailed design in early 2027 toward an expected in-service date in Q4 2028.

E. Load Forecast Retrospective

The Department recommends that the Commission require the Company to provide a retrospective comparison of prior LoadSEER forecasts (Low, Medium, and High scenarios) to actual outcomes. While we support forecasting transparency, we respectfully disagree that this type of backward-looking accuracy audit is the right tool for proactive distribution planning—particularly for a single project proceeding under the PDGU Framework.

The PDGU Framework is explicitly designed to manage forecast uncertainty and limit cost impacts to customers, consistent with Requirement A.5, which states that a goal of the Framework is to “limit cost impacts to ratepayers from forecast inaccuracies.” The Framework incorporates procedural safeguards that keep projects adaptable as conditions evolve and ensure customer dollars are not committed based on outdated assumptions.

Under Requirement C.5, the Company “shall request a modification to the project through a subsequent Proactive Upgrade Proposal with a detailed explanation and justification for the proposed changes, including changes to the forecast that impacts the need for project.” This structure ensures that any material deviation from prior forecasts – whether affecting project timing, scope, cost, or overall need – is addressed proactively and transparently before the project proceeds to detailed engineering or procurement.

As reflected in our IDP filings, load forecasts are inherently uncertain due to evolving customer behavior, economic development, electrification trends, and technology adoption. Framework requirements A.5 and C.5 operationalize this reality by aligning project approvals with updated information and providing a clear, structured pathway to adjust a project when forecasts change. Together, these provisions mitigate the risk of over- or under-building and protect customers from bearing unnecessary costs tied to material forecast inaccuracies.

Additionally, a retrospective forecast accuracy assessment on the distribution system is complex and very different than a retrospective comparison of forecasts at the bulk system because:

- **Scenario bands are not point predictions.** LoadSEER develops *ranges* – Low/Medium/High – precisely because distribution-level demand is driven by uncertain factors, including weather variability, customer electrification adoption, DER interconnections, and economic activity. Scenario bands are intended to bound plausible futures, not to predict a single “correct” outcome against which accuracy can be scored. An after-the-fact accuracy exercise risks penalizing reasonable planning judgment simply because exogenous conditions evolved toward one tail of the distribution.
- **Electrification and DER adoption introduce structural uncertainty.** Our distribution forecast is intentionally built around clusters of customers adopting certain technologies—because in practice, adoption rarely occurs smoothly or uniformly across the system. Instead, electric vehicle charging, heat-pump conversions, commercial and industrial electrification, and distributed storage often emerge in localized pockets. These clusters can rapidly and nonlinearly alter feeder-level trajectories. As a result, even small concentrations of new load or new interconnections can materially shift outcomes relative to a prior median scenario, even when the underlying modeling and assumptions were sound.
- **Proactive planning manages risk; it does not eliminate uncertainty.** The purpose of proactive upgrades is to reduce exposure to reliability shortfalls and costly last-minute builds under uncertainty. Requiring granular historical “scorecards” for each feeder proposal conflates risk management with

precision and could delay timely action in constrained urban areas where delivery timelines and permitting windows are tight.

- **The burden is disproportionate to the benefit.** Producing feeder-specific, multi-year look-backs would be highly resource-intensive. It would require normalizing for weather, customer changes, behind-the-meter resource adoption, and code or standards changes—much of which is not readily available in a form that allows for efficient retrospective reconstruction. Significant manual effort would also be needed to validate and align the reconstructed data with historical operating conditions. Completing this work at the feeder level would require additional staffing yet would offer limited value for forward-looking proactive planning, where future uncertainty—not detailed historical reconstruction—is the primary driver.

Accordingly, we respectfully request that the Commission decline the Department's request for a feeder-specific historical accuracy comparison in this proceeding.

F. PDGU Tariff Sheet

The Department recommends that the Commission approve Xcel Energy's tariff sheets with a modification to list each Commission-approved proactive upgrade and its associated PDGU Framework triggering threshold for cost recovery.

Tariffs are intended to inform retail customers about their utility service parameters and charges. Listing individual proactive upgrade projects would not be generally informative or useful to retail customers because these projects are not intended to be charged to retail customers. Rather, the costs will primarily be paid by developers and, potentially, certain large customers if the proactive upgrade project is driven by a load increase.

For these reasons, we do not support the recommended modification and request that the Commission approve the tariff sheet as filed. Including project-specific PDGU upgrade information in the tariff would not provide meaningful value to customers.² This information is already captured through the PDGU Framework's required reporting and proposal filings. Adding detailed, project-specific content to the tariff would unnecessarily complicate the document without improving customer

² Consider for example, the City Requested Facilities Surcharge Rider, which is directly billed to retail customers. The tariff describes how the surcharge is calculated and applied but does not list each specific project. *See* Northern States Power Company, Minnesota Electric Rate Book – MPUC No. 2, City Requested Facilities Surcharge Rider, 7th Revised Sheet No. 5. The rider applies to electric service within a city that requests non-standard underground distribution facilities, with excess expenditures collected from customers in that city. *Id.*

understanding or transparency.

G. Reliability Benefits

ELPC/VS/CEF request more detail on how the proposed feeder would improve reliability, including quantified impacts such as reductions in customer interruptions.

We can quantify how the upgrade improves our ability to sectionalize the feeder – showing how much load could be restored from an outage and therefore how the project reduces the load exposed to potential interruptions. This is summarized in Table 1, which shows how the project reduces the amount of contingency load at risk in forecast year 2034 on the two affected feeders. This reduction provides a clear reliability benefit, as lowering contingency load at risk also decreases the number of customers who could experience a prolonged outage if a feeder-level interruption were to occur during peak load conditions.

Table 1
Mitigated Contingency Load at Risk on Impacted Feeders

Feeder	Contingency (N-1) Risk Mitigated
ELP062	2.7 MW
ELP071	1.2 MW
Total	3.9 MW

We are unable to provide forecasts of customer-minutes-out or reliability indices such as SAIDI or SAIFI. The Company does not currently forecast these metrics on a per feeder basis, and producing forward-looking reliability forecasts at this level of granularity is neither part of our current planning process nor industry standard.

CONCLUSION

In summary, the Company appreciates the feedback offered as parties and the Company work together to implement the PDGU Framework. As explained in this Reply, the Company's proposal fully complies with and is consistent with the objective of the Framework. The Framework contains thoughtful and important protections for customers if circumstances change and the project no longer makes sense to pursue. Deferring this proposal to a future IDP cycle would run counter to the PDGU Framework's intent by delaying action until risks are more acute and fewer solutions remain viable. The Company respectfully requests the Commission to approve its PDGU proposal, as supplemented by this Reply.
