Substations have a negative impact on the environment. These include electromagnetic radiation, soil and water pollution, noise, fire risk, and visual disturbance to the environment. The radiation that these transformers emit affects both the environment and human health.

The data center(4 of them) will take away good farm land. It will look terrible compared to how it was before. It will use excess power. It will waste good water that we need for drinking. It will create an annoying noise. Clean energy(windmills) kills bats and butterflies. They cause pollution when it is time to dispose of them. I do not trust Google to tell us the truth. I know there is at least one case against them in court for not telling the truth. Energy costs will not be lowered. There will be no long-term benefits for residents and the Pine Island community. The adverse effects far outweigh the supposed benefits. We do not need to throw anymore money at education(STEM). The data center will degrade our way of life. We are paying for our own demise(surveillance and tracking).
