My family and I reside in rural Pine Island. We have lived here for 30 years. The beauty, nature and peacefulness is what brought us here. Little by little, that is vanishing. I am concerned about future powerlines, EMF's that can cause cancer to people and animals. We have endangered eagles that nest within a mile of our house. There are endangered Western painted turtles and the Tuberous Indian Plantain listed as threatened species in MN in 1984 that live and grow along the Zumbro River a block from my house. What happens to them when the water and air is polluted and they feel the vibrations of powerlines? Powerlines, emf and one date center (let alone 4) can cause irreversible damage to humans, animals, plants, the environment and for what? Money? For whom? We the residents do not benefit from any of those things. I just read that the Colorado River has dried up! A water lifeline for 35 million people and 5 million acres of farmland. Lake Mead, the country's largest reservoir near Las Vegas is now only 28% full. It's been 90 degrees plus for more days than usual already this year. I would not like to see a date center raise the temperature more because of all the heat released into the air or ground. center would devalue the land people own. No benefit there. PROVE to us first that no harm will come to anything or anyone from powerlines, data centers and substations before you build them because you can't make them go away after they are here.
