To those interested parties:

My concerns- that the engineers for the windmill are from the Florida and Georgia areas- when you come up here for meetings you jump on a plane and fly back and forth from up here- what does that do for our environment when you go back and forth on a plane?

also they shoot rockets up in the universe - what does that do for our ozone layers? It's labeled as "science" so that 's OK, there's nothing in the Bible about living on mars and the moon. So why are they able to keep doing that?

We've got renewable energy in ethanol which is proven to help emissions in our environment, but because 'Big Oil' has more money, and more lobbyists the government doesn't support the findings. It's all about the 'Almighty dollar'. Going 27 miles versus 5 miles - all the extra raw material it would take to build the project items, it would deplete our earth of minerals and adds to the cost of the projects.

Last but not least, building in Prescott, WI, or any where else please go for it, cause I don't want it in my back yard. This thought is in everyone's mind that was in that meeting that day, " not in my back yard " Build it in a tourist neighborhood - leave our farmlands alone!

Having a 'scientist' on your board doesn't justify your reasons.

Minnesota is one of the highest taxed states in the union.

Technology changed so fast- once a project is complete, it's obsolete.

Although odds aren't great of having an automobile accident, by hitting a pole, these odds increase of having an accident with these poles when you go from 5 miles to 27 miles in length- with cars going in the ditch, due to the weather, Seems like when you see a vehicle in the ditch on a highway, the vehicle enters the ditch where those mile marker posts are, so maybe the same would hold true along the transmission line, and there would be no forgiveness from the power pole, should a vehicle hit the pole

Put up your poles up north, in a slew or unpopulated area, why take up prime agriculture land?? Leave our farm lands alone!!

These projects are subsidized, I'm tired of those companies handing out my tax dollars, trying to entice the property owner to sign their property up, there fore raising my taxes even more. It puzzles me, we have ethanol that will help the environment, but the government won't mandate it's use, instead, lets spend millions more dollars and build wind towers and solar gardens!! They replace the generator propeller with longer propellers for efficiency, why not increase the wire diameter at the substations, then the power will get to where it needs to go. thank-you for your time and your consideration. roger kruger 18187 710 st. hayfield mn. 55940
