Will Seuffert Executive Secretary Minnesota Public Utilities Commission 121 Seventh Place East, Suite 350 St. Paul, MN 55101

> Re: In the Matter Minnesota Energy Resources Corporation's Petition for Approval of a Change in Demand Entitlement for its Consolidated System

Docket No. G011/M-24-____

Dear Mr. Seuffert:

In accordance with Minnesota Rules 7825.2910, subpart 2, please find enclosed Minnesota Energy Resources Corporation's (MERC's or the Company's) request to change demand entitlements for its Consolidated purchased gas adjustment area. Please note that any updated information will be provided with MERC's November 1, 2024 filing. MERC is also filing Excel and PDF versions of the attachments.

Pursuant to Minnesota Rule 7825.2910, subpart 3, a Notice of Availability has been sent to all intervenors in the Company's previous two rate cases.

Please contact me at (414) 221-4208 if you have any questions regarding the information in this filing. Thank you for your attention to this matter.

Sincerely yours,

<u>/s/Joylyn Hoffman Malueg</u> Joylyn Hoffman Malueg Project Specialist 3 Minnesota Energy Resources Corporation

RE: Minnesota Energy Resources Corporation-Consolidated Petition for Approval of Change in Demand Entitlement

Notice of Availability

Please take notice that Minnesota Energy Resources Corporation has filed a petition with the Minnesota Public Utilities Commission for approval of a change in demand entitlement for its Consolidated Purchased Gas Adjustment system.

To obtain copies, or if you have any questions, please contact:

Joylyn C. Hoffman Malueg Minnesota Energy Resources Corporation 2685 145th Street West Rosemount, MN 55068 (414) 221-4208

Please note that this filing is also available through the eDockets system maintained by the Minnesota Department of Commerce and the Minnesota Public Utilities Commission. You can access this document by going to eDockets through the websites of the Department of Commerce or the Public Utilities Commission or going to the eDockets homepage at:

https://www.edockets.state.mn.us/EFiling/home.jsp

Once on the eDockets homepage, this document can be accessed through the Search Documents link and by the date of the filing.

In the Matter of the Petition of Minnesota Energy Resources Corporation for Approval of a Change in Demand Entitlement for its Consolidated System Docket No. G011/M-24-____

SUMMARY OF FILING

Pursuant to Minnesota Rule 7825.2910, subpart 2 (Filing Upon Change in Demand), Minnesota Energy Resources Corporation – Consolidated (MERC or the Company), hereby petitions the Minnesota Public Utilities Commission (Commission) for approval of changes in demand entitlements for MERC customers served off of the Consolidated system. MERC requests the Commission approve the requested changes to be recovered in the Purchased Gas Adjustment (PGA) beginning November 1, 2024.

STATE OF MINNESOTA BEFORE THE MINNESOTA PUBLIC UTILITIES COMMISSION

In the Matter of the Petition of Minnesota Energy Resources Corporation for Approval of a Change in Demand Entitlement for its Consolidated System Docket No. G011/M-24-____

FILING UPON CHANGE IN DEMAND

Pursuant to Minnesota Rule 7825.2910, subpart 2 (Filing Upon Change in Demand),

Minnesota Energy Resources Corporation - Consolidated (MERC or the Company), a subsidiary

of WEC Energy Group, hereby petitions the Minnesota Public Utilities Commission (Commission)

for approval of changes in demand entitlements for MERC-Consolidated customers served off

Centra Pipeline, Viking Gas Transmission, and Great Lakes Gas Transmission (collectively the

"Consolidated" pipelines).¹ MERC requests the Commission approve the requested changes to

be recovered in the Purchased Gas Adjustment (PGA) beginning November 1, 2024.

This filing includes the following attachments:

| Attachment A: | Notice of Availability. |
|---------------|---|
| Attachment B: | One paragraph summary of the filing in accordance with Minn. R. 7829.1300, subp. 1. |
| Attachment C: | Petition for Change in Demand with Attachments. |
| Attachment D: | Certificate of Service and Service List. |

¹ MERC also serves certain of its Minnesota customers off the Northern Natural Gas ("NNG") system. MERC requests approval of a demand entitlement change for the 2024-2025 heating season for its MERC-NNG PGA in a separate docket.

The following information is provided in accordance with Minn. R. 7829.1300:

I. Summary of Filing

Pursuant to Minn. R. 7829.1300, subp. 1, a one-paragraph summary of the filing is attached.

II. <u>Service</u>

Pursuant to Minn. R. 7829.1300, subp. 2, MERC has served a copy of this filing on the

Department of Commerce, Division of Energy Resources and the Office of the Attorney

General — Residential Utilities Division. The summary of filing has been served on all parties

on the attached service list. Additionally, pursuant to Minn. R. 7825.2910, subp. 3, a Notice of

Availability has been sent to all intervenors in the Company's previous two rate cases.

III. General Filing Information

A. Name, Address, and Telephone Number of the Utility

Minnesota Energy Resources Corporation 2685 145th Street West Rosemount, MN 55068 (651) 322-8901

B. Name, Address, Electronic Address, and Telephone Number of Attorney for the Utility

Kristin M. Stastny Taft Stettinius & Hollister LLP 2200 IDS Center 80 South 8th Street Minneapolis, MN 55402 <u>KStastny@Taftlaw.com</u> (612) 977-8656

C. Date of the Filing and Proposed Effective Date

Date of filing: August 1, 2024 Proposed Effective Date: November 1, 2024

D. Statute Controlling Schedule for Processing the Filing

Minnesota Statutes and related rules do not provide an explicit time frame for action by

the Commission. Under Minn. R. 7829.1400, initial comments are due within 30 days of filing,

with reply comments due 10 days thereafter.

STATE OF MINNESOTA BEFORE THE MINNESOTA PUBLIC UTILITIES COMMISSION

Katie J. Sieben Hwikwon Ham Valerie Means Joseph K. Sullivan John A. Tuma Chair Commissioner Commissioner Commissioner

In the Matter of the Petition of Minnesota Energy Resources Corporation for Approval of a Change in Demand Entitlement for its Consolidated System Docket No. G011/M-24-____

PETITION OF MINNESOTA ENERGY RESOURCES CORPORATION-CONSOLIDATED FOR CHANGE IN DEMAND

I. Introduction

Pursuant to Minnesota Rule 7825.2910, subpart 2 (Filing Upon Change in Demand),

Minnesota Energy Resources Corporation - Consolidated (MERC or the Company), a subsidiary

of WEC Energy Group, hereby petitions the Minnesota Public Utilities Commission (Commission)

for approval of changes in demand entitlements for MERC-Consolidated customers served off

Centra Pipeline, Viking Gas Transmission, and Great Lakes Gas Transmission (the

"Consolidated" pipelines). MERC requests that the Commission approve the requested changes

to be recovered in the Purchased Gas Adjustment (PGA) beginning on November 1, 2024.

Included with this filing are the following Attachments:

Attachment 1: Design-Day Demand Summary

Attachment 2: Sales Forecast

Attachment 3: Current and Proposed Entitlement Levels

Attachment 4: Rate Impact of the Proposed Demand Change

Attachment 5: Financial Option Summary

Attachment 6: Winter Plan

Attachment 7: Entitlement History

Attachment 8: Change in Entitlement Levels and Related Demand Costs

Attachment 9: Actual Throughput and Design-Day Forecast Estimated Throughput

Attachment 10: Customer Counts

<u>Attachment 11</u>: Hedging Summary

Attachment 12: Forecast Methodology

Through this filing, MERC also addresses compliance with Order Points 9 and 10 from the

Commission's February 17, 2023 Order in Docket Nos. G999/CI-21-135 and G011/CI-21-611.²

II. Discussion

A. MERC's Consolidated Design-Day Requirements

Minnesota Rule 7825.2910, subpart 2(b) requires that a filing upon change in demand include the utility's Design-Day demand by customer class and the change in Design-Day demand, if any, necessitating the demand revision. The Consolidated Design-Day requirement has increased by 588 dekatherms (dth) since November 1, 2023. This represents a 1.03% increase in Design-Day requirement over the 2023-2024 heating season.

² Order Point 9 requires discussion of how changes to pipeline capacity affects the Company's supply diversity, and if pipeline capacity comes at a cost premium but increases supply diversity, provide a meaningful cost/benefit discussion of the tradeoff, including a comparison with the least-cost capacity option. Order Point 10 requires MERC to include in its relevant, annual forward-looking gas planning or hedging filings: A) its expected supply mix across different load and weather conditions throughout each month of the upcoming winter season, B) the forecasted minimum, average, and maximum day load requirements, and C) the expected mix of baseload, storage, and spot supply on those days.

| Table 1: M | ERC Proposed Conso For the 2023-2024 He | olidated Reserve Marg eating Season | ins |
|--------------|---|---|--------|
| | Reserve Margin 2024-2025 Heating Season | Reserve Margin 2023-2024 Heating Season | Change |
| Consolidated | 11.59% | 8.52% | 3.07% |

For the Demand Entitlement filing effective November 1, 2024, the total Design-Day requirement for MERC – Consolidated is 57,736 dth (Attachment 1). The difference between the total Design-Day requirement and total Design-Day capacity results in an 11.59% reserve margin (Attachment 3). As required by Order Point 9 of the Commission's Order in Docket No. G011/M-15-722, Attachment 3 reflects separate summer and winter demand entitlements for MERC-Consolidated.

B. Gas Supply

Minnesota Rule 7825.2910, subpart 2, requires a description of Design-Day gas supply from all sources under the new level, allocation, or form of demand. This information is provided in Attachment 3.

C. Forecast Methodology for MERC Demand Entitlement November 1, 2024 See Attachment 12.

III. Additional Filing Requirements

A. Daily Design-Day Estimate to Actual Comparison

In the 2007-2008 demand entitlement dockets,³ MERC agreed to include a daily estimate utilizing the Design-Day model, which is calculated in Attachment 9. The daily estimate is compared to actual consumption. The actual volumes are total throughput which

³ Docket Nos. G007/M-07-1402; G007/M-07-1403; G007/M-07-1404; and G007/M-07-1405.

includes interruptible and transportation volumes that are located behind MERC citygates. The Design-Day model only calculates firm volumes. MERC does not forecast on a daily/monthly basis utilizing the Design-Day model. The Design-Day model is utilized to calculate the theoretical peak day.

B. Average Customer Counts

In the 2007-2008 demand entitlement dockets, MERC agreed to include average customer counts which are provided in Attachment 10.

C. Balancing

Order Point 4 of the Commission's January 21, 2015, Order in MERC's 2010-2011 demand entitlement dockets, Docket Nos. G007/M-10-1166; G007/M-10-1167; G011/M-10-1168; and G011/M-10-1169, required that in future demand entitlement filings, MERC provide a clarification of its statements regarding system balancing and detailed evidence assuring the Commission that the appropriate customer group is paying for any balancing charges or penalties. Additionally, in Docket No. G999/AA-12-756, by Order dated November 14, 2013, the Commission ordered that "prospectively, all regulated natural gas utilities shall recover balancing service costs, and shall credit the utility's penalty revenues and the pipeline's revenue credits, to the commodity portion of the PGA effective with the earliest true-up filing (for revenues) or the earliest monthly PGA (for costs) that can reasonably be implemented."

MERC subsequently revised its monthly PGA filings, beginning November 2013, to recover all balancing costs via the commodity portion of the PGA. MERC's 2014 AAA and trueup filings, as well as the 2014 Demand Entitlement filing, also reflected this change. The current MERC–Consolidated demand entitlement filing includes detailed evidence of the allocation of balancing costs to the commodity portion of the PGA on Attachment 4, page 2 of 2.

D. MERC's Proposed Consolidated System Demand-Related Changes

There are two types of demand entitlement changes. The first type is Design-Day deliverability, which quantifies the amount of firm transportation and storage capacity available to MERC's Consolidated customers during winter peak periods. The second type does not affect Design-Day deliverability levels, but alters the capacity portfolio and the PGA costs recovered from customers.

1. Design-Day Deliverability Changes

As shown in Attachment 3, MERC's Design-Day Deliverability increased by 2,410 dth/day as compared to 2023-2024. This is due to acquiring 2,202 dth of transportation capacity from Great Lakes Gas Transmission ("GLGT"), and updating volumes for the Centra Pipeline contract. The GLGT capacity was acquired to reliably meet the demand behind the GLGT gates. For 2024-25, the volume of the Centra Pipeline contract has been updated to 10,108 Dth/day to reflect the updated peak day estimate for the customers served by Centra Pipeline.

The Commission's February 17, 2023 Order in Docket Nos. G-999/CI-21-135 and G-011/CI-21-611 Requiring Actions to Mitigate Impacts from Future Natural Gas Price Spikes, Setting Filing Requirements, and Initiating a Proceeding to Establish Gas Resource Planning Requirements, requires in Order Point 9 that MERC discuss how changes to pipeline capacity affects the Company's supply diversity, and if pipeline capacity comes at a cost premium but increases supply diversity, provide a meaningful cost/benefit discussion of the tradeoff, including a comparison with the least-cost capacity option. The acquired incremental capacity discussed above did not impact MERC's supply diversity, as the Company increased its capacity with supply to be sourced at the Emerson GLGT supply basin for the volume change on GLGT, and at the Spruce supply basin for the volume change on Centra Pipeline. Further, no other pipeline alternatives are available for the demand being served from GLGT and Centra Pipeline, and Liquefied Natural Gas ("LNG") is not a viable operational or cost effective option for those parts of MERC's system. Therefore, acquiring the additional capacity via an Open Season that GLGT

held in December of 2023 provided MERC the opportunity to maintain deliverability for its customers at GLGT's current tariff rates, which are expected to be much less costly than future pipeline expansions. GLGT's Open Season limited the receipt point of the capacity to only the Emerson location, therefore no other options were available. This capacity was awarded at GLGT's current tariff rate, therefore no pipeline demand cost premiums resulted from the capacity purchase. The small capacity increase on the Centra Pipeline was to reflect the updated peak day estimate for the customers served by Centra Pipeline and is a general request of the pipeline for the following year. There are no liquid, viable, alternative supply basins for the small amount of increased capacity, therefore all 10,108 dth/day are met with gas at the Spruce supply basin.

2. Other Demand Entitlement Changes

MERC continues to maintain its storage contracts with ANR Pipeline Storage, as detailed in previous demand entitlement filings and reflected in Attachments 4 (page 2 of 2), 7, and 8. MERC extended both of the ANR Pipeline contracts through March 31, 2028. Small changes to storage volumes and rates will occur to the ANR Storage contract each year as a result of annual fuel rate changes, as reflected in Attachments 4 (page 2 of 2), 7, and 8.

Additionally, MERC notes that Viking Gas Transmission filed a rate case in Docket No. RP23-917 with the Federal Energy Regulatory Commission ("FERC") on July 28, 2023. On August 31, 2023, FERC issued an Order suspending the implementation of Interim Rates by Viking Gas Transmission ("Viking") until February 1, 2024; Viking implemented Interim Rates on February 1, 2024. During February 2024, a settlement agreement was achieved, and on March 1, 2024, FERC issued an order granting Viking to implement Settlement Rates effective as of February 1, 2024 and stating that interim rates are subject to refund. Based on this timing, Viking was able to forego implementation of Interim Rates and implemented Settlement Rates

effective February 1, 2024. Therefore no refunds were necessary nor conducted by Viking given that Interim Rates were never implemented. The Settlement Rates are reflected in the Company's demand rates in this filing..

E. Financial Option Units and Premiums

MERC has started its purchases of future contracts and call options for the 2024-2025 winter period. Financial hedge volumes and costs are shown in Attachments 5 and 11 (page 1 and 3). The physical forward start and call option premium costs additionally flow through the spreadsheet in Attachment 4, pages 1 and 2, and in Attachment 8.

In accordance with the Commission's April 9, 2021, Order in Docket No. G011/M-20-833 approving MERC's variance extension request to recover the costs of financial instruments through the PGA, MERC provides the following information:

- a list of all financial instruments purchased for the upcoming heating season (see Attachment 11);
- ii. the cost premium associated with each contract (see Attachment 5);
- iii. the size (in dth) of each contract (see Attachments 5 and 11);
- iv. the contract date (see Attachment 5);
- v. the contract price (see Attachment 11);
- vi. an attachment that details the projected total system sales estimates for the upcoming heating season, including all supporting data and assumptions used when calculating the sales forecast, and the total number of volumes hedged using financial instruments for the upcoming heating season (see Attachment 2 and Attachment 6, page 1 of 2); and
- vii. a detailed discussion of the anticipated benefits to ratepayers related to MERC's financial instrument contracts, discussed below.

The Consolidated 2024-2025 Winter Portfolio Hedging Plans - Minnesota Energy Resources Corporation for Great Lakes Gas Transmission, Viking Gas Transmission, and Centra Pipeline gas supply purchases are shown on Attachment 6. MERC's hedging strategy covers up to 60% of normal winter volumes; up to 30% through physical storage; and 30% through financial instruments (10% futures and 20% options). The weighted average price of purchased futures contracts of natural gas for the 2024-2025 winter is \$3.6461/dth. Please see Attachment 11, page 1 of 3. As shown in Attachment 11, page 2 of 3, MERC projects the ANR storage WACOG to be \$2.1787/dth. While MERC still continues with its strategy to purchase call options around a \$0.10/dth premium, the overall gas market volatility has pushed the strike price of the purchased call options up to an average of \$7.1686/dth. Both the futures and option strike prices are up slightly from winter 2023-24. If the NYMEX contract(s) settle above that price, the options are exercised and the MERC customer gas cost is capped at the average strike price. Please see Attachment 11, page 3 of 3. The remaining winter volumes are purchased at index or market prices. All numbers reflected are natural gas costs only and do not include any transportation, storage, hedge premium, or margin costs.

The Commission's February 17, 2023 Order in Docket Nos. G-999/CI-21-135 and G-011/CI-21-611 Requiring Actions to Mitigate Impacts from Future Natural Gas Price Spikes, Setting Filing Requirements, and Initiating a Proceeding to Establish Gas Resource Planning Requirements, requires in Order Point 10 that MERC includes in its relevant, annual forwardlooking gas planning or hedging filings: A) its expected supply mix across different load and weather conditions throughout each month of the upcoming winter season, B) the forecasted minimum, average, and maximum day load requirements, and C) the expected mix of baseload, storage, and spot supply on those days. Attachment 6, page 3, provides this information for the November 2024 through March 2025 period. All load estimates are based on the previous three years observed data, except for the December through February months, in which the Design

Day (i.e. Peak Day) was used to represent the maximum load. While three years of historical data provide a reasonable estimate, conditions can deviate and provide load requirements different from those in the past.

F. PGA Cost Recovery

MERC proposes to begin recovering the costs associated with the change in demandrelated costs in its monthly PGA effective November 1, 2024. Rate impacts associated with this change can be found in Attachment 4.

G. Impacts of Telemetry

Throughout the course of the year, a number of customers request to switch from interruptible to firm service. MERC evaluates these requests to determine the impact to its system and upstream entitlement levels. MERC's process requires an evaluation of the system capability before a customer is allowed to switch to firm. As a result, the firm volumes associated with a customer switch fall within the Design-Day parameters and do not impact demand entitlement levels.

IV. Conclusion

MERC respectfully requests that the Commission approve the requested changes to be recovered in the Purchased Gas Adjustment (PGA) beginning November 1, 2024.

DATED: August 1, 2024

Attachment 12: Forecast Methodology for MERC Demand Entitlement Effective November 1, 2024

- 1. <u>Peak-day</u>
 - a. <u>Purpose</u>

Gather data and perform analysis used in the "Petition for Change in Demand" for

MERC, otherwise known as the "MERC Demand Entitlement Filings."

b. Background

MERC customers are served by four pipelines¹

- 1. VGT Viking Gas Transmission system
- 2. NNG Northern Natural Gas pipeline
- 3. GLGT Great Lakes Gas Transmission pipeline
- 4. Centra Centra pipeline

Weather data is obtained from eight weather stations: International Falls, Bemidji,

Cloquet, Fargo, Minneapolis, Rochester, Worthington, and Ortonville.

For analytical purposes, data is subdivided, analyzed, and regressed by the following

nine demand areas:

| | Pipeline | PGA | Weather Station(s) |
|---|----------|-------------------|---------------------|
| 1 | Centra | MERC Consolidated | International Falls |
| 2 | GLGT | MERC Consolidated | Bemidji |
| 3 | GLGT | MERC Consolidated | Cloquet |
| 4 | VGT | MERC Consolidated | Fargo |
| 5 | NNG | MERC NNG | Cloquet |
| 6 | NNG | MERC NNG | Minneapolis |
| 7 | NNG | MERC NNG | Ortonville |
| 8 | NNG | MERC NNG | Rochester |
| 9 | NNG | MERC NNG | Worthington |

¹ MERC acquired Interstate Power & Light Company's Minnesota natural gas operations and customers in 2015. The Commission's Order Approving Sale Subject to Conditions in Docket No. G-001,011/PA-14-107 required MERC to maintain the transitioned customers on a separate PGA (MERC–NNG–Albert Lea). Pursuant to the Commission's Order in Docket No. G011/GR-15-736, the NNG and NNG–Albert Lea PGAs were consolidated effective July 1, 2017. MERC now submits only two demand entitlement petitions (NNG and Consolidated) for each heating season.

2. Analytical Approach

- a. <u>Summary</u>
- 1. Obtain daily weather data for each weather station.
- 2. Obtain daily total throughput volumes by pipeline and by weather station.
- 3. Obtain daily large volume transportation, interruptible, and joint interruptible volumes by pipeline and by weather station (Data A).
- Obtain daily small volume interruptible volumes by pipeline and by weather station (Data B).
- 5. Calculate daily "firm" volumes by subtracting both Data A and Data B from total throughput volumes.
- 6. Perform quality control on volumetric data (e.g., identify missing or bad reads, and, to the extent possible, fix missing or bad reads).
- Perform firm peak day regressions. In response to comments from the Minnesota Department of Commerce, Division of Energy Resources (Department):
 - a. Incorporate a methodology to mitigate the impact of autocorrelation.
 - b. Provide a reasonable explanation whenever a regression model is selected that does not have an intercept.
- 8. Add back Daily Firm Capacity (DFC) customer selections.
 - 3. Process

The Peak Day Process consisted of:

- I. Data Preparation
- II. Regression Generation of Net Daily Metered Volumes
- III. Volume Risk Adjustments
- IV. Adjusting the Regression Results to a Firm Peak Day Estimate
- V. Firm Peak Day Estimate Gate Station Allocation

- i. The Data Preparation consisted of:
- Identify the coldest Adjusted Heating Degree Day (AHDD) since January 1996 for each weather station. Note, this is a change in practice from prior analysis that used a rolling 20-year period. The change was included because many weather stations experienced historically cold weather in the January/February 1996 time period and without inclusion of that additional data from January/February 1996, AHDD were materially lower and not reflective of MERC's capacity needs.
- Determine the most recent three years of December through February daily total metered throughput by pipeline and by weather station.
- Determine the most recent three years of December through February daily large volume transportation, interruptible, and joint interruptible volumes by pipeline and by weather station (Data A).
- Determine the most recent three years of December through February daily small volume interruptible volumes by pipeline and by weather station (Data B).
- Review daily total metered throughput, Data A, and Data B, and identify missing or bad reads, and to the extent possible, fix missing or bad reads. To the extent that the data could not be fixed, it was not included in the regressions.
- Subtract both Data A and Data B daily meter readings for all three December through February years from the total throughput for each pipeline and each weather station. Use the resulting net daily metered volumes for regressions. Examples of transportation, interruptible, and joint interruptible meter readings subtracted are paper mills, direct-connects, taconites, and off-system end users. See "Adjusting the Regression Results to a Firm Peak Day Estimate" below.

3

Each daily weather station data file was searched to find the coldest Adjusted Heating Degree Day (AHDD65) since January 1996. Many weather stations experienced historically cold weather in the January/February 1996 time period; without inclusion of that additional data from January/February 1996, AHDD65 were materially lower and not reflective of MERC's capacity needs. The coldest AHDD65 data since 1996 is included in the table below, along with the AHDD65 conditions on the day prior ("AHDD65-1").

| | | <u>Avg.</u> | <u>Avg.</u> | | | |
|---------------------|-----------|-------------|-------------|-------|---------------|-----------------|
| Station | Date | Temp | Wind | HDD65 | <u>AHDD65</u> | <u>AHDD65-1</u> |
| Bemidji | 1/29/2019 | -32 | 14 | 97 | 110 | 84 |
| Cloquet | 1/29/2019 | -24 | 16 | 89 | 103 | 74 |
| Fargo | 1/18/1996 | -16 | 34 | 81 | 109 | 85 |
| International Falls | 2/2/1996 | -34 | 8 | 99 | 107 | 107 |
| Minneapolis | 1/29/2019 | -20 | 17 | 85 | 100 | 71 |
| Rochester | 1/29/2019 | -20 | 21 | 85 | 104 | 76 |
| Worthington | 1/29/2019 | -20 | 21 | 85 | 103 | 81 |
| Ortonville | 1/29/2019 | -23 | 14 | 88 | 101 | 77 |
| | | | | | | |

This data by weather station was then compared to the AHDD65 data used in the

previous demand entitlement filing:

| | | <u>Avg.</u> | <u>Avg.</u> | | | |
|---------------------|-------------|-------------|-------------|--------------|---------------|-----------------|
| Station | <u>Date</u> | <u>Temp</u> | Wind | <u>HDD65</u> | <u>AHDD65</u> | <u>AHDD65-1</u> |
| Bemidji | 2/1/1996 | -34 | 8 | 99 | 107 | 94 |
| Cloquet | 2/2/1996 | -31 | 7 | 96 | 103 | 100 |
| Fargo | 1/18/1996 | -16 | 34 | 81 | 109 | 85 |
| International Falls | 2/2/1996 | -34 | 8 | 99 | 107 | 107 |
| Minneapolis | 2/2/1996 | -25 | 8 | 90 | 97 | 92 |
| Rochester | 2/2/1996 | -27 | 10 | 92 | 101 | 94 |
| Worthington | 1/18/1996 | -8 | 32 | 73 | 96 | 74 |
| Ortonville | 1/14/2009 | -21 | 11 | 86 | 96 | 86 |

While the January, 2019 cold weather outbreak was significant, it was not considered to be as severe as the weather conditions experienced in 1996. With the exception of Worthington, the 1996 weather conditions overall were colder when considering both the current day and the prior day weather conditions. Following is the data by weather station that was ultimately used in MERC's current analysis:

| | | <u>Avg.</u> | <u>Avg.</u> | | | |
|---------------------|-----------|-------------|-------------|-------|---------------|-----------------|
| Station | Date | Temp | Wind | HDD65 | <u>AHDD65</u> | <u>AHDD65-1</u> |
| Bemidji | 2/1/1996 | -34 | 8 | 99 | 107 | 94 |
| Cloquet | 2/2/1996 | -31 | 7 | 96 | 103 | 100 |
| Fargo | 1/18/1996 | -16 | 34 | 81 | 109 | 85 |
| International Falls | 2/2/1996 | -34 | 8 | 99 | 107 | 107 |
| Minneapolis | 2/2/1996 | -25 | 8 | 90 | 97 | 92 |
| Rochester | 2/2/1996 | -27 | 10 | 92 | 101 | 94 |
| Worthington | 1/29/2019 | -20 | 21 | 85 | 103 | 81 |
| Ortonville | 1/14/2009 | -21 | 11 | 86 | 95 | 86 |

ii. The Regression Generation of Net Daily Metered Volumes consisted of:

- For each of the pipelines and weather stations:
 - Gather the net daily metered volumes and weather station data including AHDD65.²
 - 2. Add indicator variables for day-type and month. Day-type variables are used to isolate load that changes by day of the week, such as commercial or industrial customers who may change their consumption on weekends when they run fewer shifts. Month indicator variables are used to isolate load that changes based on winter months, such as businesses that are open extra hours in December and resume normal operating hours in January.
 - 3. Perform ordinary least squares linear regressions for the 3-year time frame using the AHDD65 weather variable and the significant indicator variables.
 - In response to comments from the Department, the regression methodology incorporates a process to mitigate the impact of autocorrelation. See section below on autocorrelation.

 $^{^2}$ Temperature and weather data were obtained from DTN (formerly Schneider Electric) via DataMaxx then converted to HDD65 and AHDD65 in an Excel spreadsheet by MERC – Gas Supply. Temperature and wind data is the 24-hour average based on the 9am to 9am gas day.

- 5. In response to comments from the Department, provide an explanation whenever we choose to use a regression model that does not have an intercept.
- Summarize the Baseload and Use/AHDD65 and Use/Prior Day AHDD65 from each regression.
- Calculate a point estimate from each regression based on the baseload value plus the Use/AHDD65 coefficient times the coldest AHDD65 since January 1996 and the Use/Prior Day AHDD65 coefficient times the AHDD65 on the day prior to the coldest AHDD65 since January 1996.

iii. Volume Risk Adjustments

Volume risk adjustments were incorporated into the forecast to provide a confidence level that the daily metered load under design conditions would not exceed the daily metered regression estimate. An appropriate volume risk adjustment was determined for each regression group by multiplying the standard error of each regression analysis (sigma) by a factor needed to attain a desired confidence level. The desired confidence level chosen was 97.5%.

iv. Adjusting the Regression Results to a Firm Peak Day Estimate consisted of:

1. Add back DFC customer selections

While transportation, interruptible, and joint interruptible customer volumes were removed (as described above), in order to determine firm peak day load, daily firm capacity volumes needed to be added back. Reporting from the billing system provided historical monthly DFC data for the joint service customers from the prior winter that showed the volume that each customer has selected to receive as firm service from MERC each month. Based on direction from the Company's Gas Supply department, the Joint Firm/ Interruptible customers who were relying on MERC to provide peak day firm supply were identified and their daily firm capacity volumes were summed by month for each pipeline. The total volumes were then added back to the regression results.

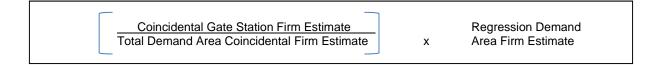

v. Firm Peak Day Estimate Gate Station Allocation:

After the data is subdivided, analyzed, and regressed to the nine demand areas, the data is further subdivided to each Gate Station within each of the nine demand areas. To provide a firm peak day estimate for each Gate Station, the following steps are taken:

- 1. The previous winter's actual historical throughout, by Gate Station, is gathered.
- Estimated transportation, interruptible, and joint interruptible customer volumes are allocated to each Gate Station. The allocation is determined by which Gate Station has the closest geographical location to the customer.
- 3. For each Gate Station, using the last winter's data, the estimated coincidental transportation and interruptible Gate Station non-firm throughput total for the same date of the Gate Station's total throughput peak is then subtracted from the total throughput peak value in order to calculate an estimated coincidental peak firm value for each Gate Station.

Gate Total Throughput Peak – Same Date Location-based estimated Non-Firm Total Throughput = Coincidental Gate Station Firm Estimate

4. Each of the calculated coincidental peak firm values at each Gate Station are then divided by the new demand area total of the coincidental firm peak day estimates, and then multiplied by the initial demand area firm peak day total.

By having the coincidental peak day estimates as a ratio of the intial demand area

estimates, the Gate Station peak day estimates continue to maintain the intial

demand area estimates that resulted from the regression analyses in steps i.

through iv. above.

4. Autocorrelation Review

The Commission's February 4, 2015, Order in MERC's 2012-2013 demand entitlement

dockets³ required MERC to check its regression models for autocorrelation and correct the model if autocorrelation is present and to provide a reasonable explanation of its use of no-intercept models if it chooses to use one again in the future.

In a regression analysis, using time series data, autocorrelation of the errors is a problem. Autocorrelation of the errors, which themselves are unobserved, can generally be detected because it produces autocorrelation in the observable residuals. (Errors are also known as "error terms" in econometrics.) Autocorrelation violates the ordinary least squares (OLS) assumption that the error terms are uncorrelated. While it does not bias the OLS coefficient estimates, the standard errors tend to be underestimated (and the t-scores overestimated) when the autocorrelations of the errors at low lags are positive. The traditional

³ Docket Nos. G011/M-12-1192, G011/M-12-1193, G011/M-12-1194, and G011/M-12-1195

test for the presence of first-order autocorrelation is the Durbin–Watson statistic or, if the explanatory variables include a lagged dependent variable, Durbin's h statistic. To correct for this use, MERC used the Yule-Walker estimation method within the SAS software package to employ an AR(1) regression which then showed that the Durbin–Watson statistics are all either close to 2 or above.

5. Design-Day Model

Order Point 5 of the Commission's January 21, 2015, Order in MERC's 2010-2011 demand entitlement dockets⁴ required that in future demand entitlement filings, MERC provide (1) the determinants used in its Design-Day models that account for each and every impact on usage associated with economic conditions, and (2) a detailed explanation of each and every cause of unexpected changes in usage that might impact the Design-Day calculation, and what, if any, modifications the Company made to its Design-Day numbers. MERC does not forecast its Design Day using economic variables. Additionally, there were no unexpected changes in the Design-Day forecast.

6. Verification of Regression Analysis Results

Order Point 10 of the Commission's April 28, 2016, Order in Docket No. G011/M-15-722 required that MERC verify its regression analysis results in future demand entitlement filings to ensure the results are consistent with the underlying theory the analysis attempts to explain. MERC has carefully reviewed the results of its regression analysis and verified that the results are consistent with the underlying theory the analysis attempts to explain. Please see the May 31, 2016, compliance filing in Docket Nos. G011/M-15-722, G011/M-15-723, and G011/M-15-724 for further discussion of this issue.

ATTACHMENT D

Docket No. G011/M-24-____

In the Matter of the Petition of Minnesota Energy Resources Corporation for Approval of a Change in Demand Entitlement for its Consolidated System

CERTIFICATE OF SERVICE

I, Colleen T. Sipiorski, hereby certify that on the 1st day of August, 2024, on behalf of Minnesota Energy Resources Corporation (MERC) I electronically filed a true and correct copy of MERC's Petition for Approval of a Change in Demand Entitlement on <u>www.edockets.state.mn.us</u>. Said documents were also served via U.S. mail and electronic service as designated on the attached service list.

Dated this 1st day of August, 2024.

<u>/s/ Colleen T. Sipiorski</u> Colleen T. Sipiorski
