Commissioner MN PUC ,
MN Public Utilities Commission

I've been following the conversations around energy storage in our county, and I have to say, I'm genuinely optimistic about what the Blue Lake Battery Energy Storage System could mean for us. It's not just about finding alternatives to traditional energy sources; it's about stabilizing our energy costs, which is a real concern for many of us who are already feeling the pinch with rising living expenses.

You know, when I look at how energy storage can help our community, it feels like a chance for us to take control of our energy future. It's about ensuring that our families can afford to keep the lights on without worrying about sudden spikes in utility bills. Plus, investing in energy storage opens doors for new jobs and economic growth right here in Scott County, which is something we could all benefit from.

It's refreshing to think that we can harness our resources in a way that not only supports our everyday lives but also respects the environment we cherish. I believe that community-driven projects like this can pave the way for a more stable and prosperous future for all of us. Supporting the Blue Lake BESS feels like a step toward a brighter, more resilient community, and I hope our local leaders see the potential in it as well.
