I Darrel Corazalla would like to make it known I was not informed via a mailed notice of the public open house held in Maple Grove, MN at the Maple Grove Community Center on April 22, 2025 from 5:00 to 7:00 PM. There is a dashed purple line around the outer perimeter of the potential routing paths that is described as the "Notice Area" in the legend of MAP 4 contained in the Northwest Maple Grove 115 kV Transmission Project, March 2026 Docket No. E002/TL-24-427 document. I live at 15800 Arbor Ridge Pkwy which is along the path referred to as North Option A connected to the North Option Base. Should I have received a notice in the mail last year prior to the April 22nd, 2025 meeting as I had received a notice in the mail March 24th informing me of the meeting to be held April 14th, 2026?

I would like to suggest creating a "North Option B" which would begin at the east end of 105th Ave. Instead of extending west onto 105th Ave as it does in "North Option A", it would continue south along what used to be "Ranchview" to the "South Option Base" then continue west to the New West Maple Grove Substation. Looking at the Hennepin County Property Map, it appears no property lines have been redrawn over what used to be "Ranchview", therefore no interference with any existing structures.

Or even run the lines directly down Maple Grove Parkway to 610 and have them follow 610 to the switching station on the west side of 94. Most large power lines run down major highways not down residential streets.

All of us neighbors living on 105th and most of Arbor ridge Parkway neighbors already have those 115KV power lines running through the back of their properties and I would be concerned about the amount of Hysteresis losses of all the high power lines and the health concerns related if an additional line was run in front of our properties.

I also have a concern on my property value now and in the future when the land which we own gets developed and multi-family unites will be built. There has been hundreds of multi-family units built within a 1/4 mile of our homes and it will continue in the near future as well. I feel Neighbors that

actually live currently on the route of the proposed wire installations should have the most consideration.
