Hey Scott, this is Bruno Zager from the Fond du Lac Band of Lake Superior Chippewa. I was just sent the public notice for the environmental review on the joint application for Minnesota Power for a site route permit for the 85 MW Boswell Solar project. Little bit tight to the Mississippi River there. That was the only comment I have. Everything else looked pretty good. But when you look at that site map on that southeast corner where that lake enters into the Mississippi River there on that corner, it seems a little tight to the river. The rest of it looks pretty good, just that waterway may be a problem because of the amount of flow coming off of those panels. I manage one MW site. I'm in farmhouse specialist and energy project manager for the Fonlock band. My cell is 218-409-3543. If you wanna get ahold of me at all, that's the best line. I'm out in the field on projects half the time. But just taking a look at this, I was on the PSC meeting the other day listening in with tastes and Matera presentation and I was sent this just recently so I'm just commenting on it. The rest of it looks pretty good. Thanks a lot. You have a good day. Bye now.
