Re: PUC Docket Number(s): 1A-6557/WS-06-91

I am writing in regard to the pile of trash-windmill blades-stored on private property owned by TMT that backs up to a row of homes (i.e. - a residential area.) This junkyard has existed for 3 to 4 yrs. with no action for removal or disposal. TMT leases the property to the company(ies) and is paid to do so. Therefore TMT is not interested in moving the blades out of Grand Meadow. The company owning the blades changes its name each year so TMT continues to issue a new lease. Since Xcel Energy has the permit to build the windmills, should they not be responsible to some extent for the disposal of these blades? I cannot swear these blades have caused pollution or contamination but are definitely an eye sore and a junk yard in our backyard. I do not know what authority the commission has to order the removal of these blades - only asking for any help you can give us. We will appreciate you taking time to look into the matter and helping to solve this problem. Thank you!
