Hi, my name is Jeanie Foster. I live at 1385 230th st w, Farmington MN. I will be surrounded on three sides by the solar panels and will see them across the street too. 1400 acres is to much to be around homes. I won't be able to see any land, just a sea of solar panels. This will negatively affect my enjoyment of living in my home. They are ugly, make noise, glare, and are industrial. Who knows about the health problems in the future. This solar farm will take over **All** the fields and open land around my home. Please look at the map and my address. I really will be surrounded by 4 sides if I look across the street. I already have the large electric lines, oil line right on and above my property. I rely on the sale of my home for retirement. Who is going to buy a home surrounded by a industrial solar farm ? Would you? Why should I have to lose money on the sale of my home ? I also hear that batteries might be stored on 6 acres. The fire station would never be able to handle a fire like this. A small solar panels farm might be ok, but not all of the land around our homes. Please propect us from this. Thank you, Jeanie Foster
