**RE: In the Matter of the Otter Tail Power Company's 2025 Integrated
Distribution Plan
Docket No. E017/M-25-141
Reply Comments – Transportation Electrification Plan**

Dear Ms. Bergman:

Otter Tail Power Company (Otter Tail Power) hereby submits to the Minnesota Public Utilities Commission (Commission) its Reply Comments in the above-referenced matter.

Otter Tail Power has electronically filed this document with the Commission and is serving a copy on all persons on the official service list for these dockets pursuant to Minnesota Rule 7690.0800. A Certificate of Service is also enclosed.

Please contact me at 218-739-8639 or jgrenier@otpc.com if you have any questions regarding this filing.

Sincerely,

/s/ JASON GRENIER

**STATE OF MINNESOTA
BEFORE THE
MINNESOTA PUBLIC UTILITIES COMMISSION**

**In the Matter of Otter Tail Power
Company's 2025 Integrated
Distribution Plan – Transportation
Electrification Plan**

**Docket No. E017/M-25-141
REPLY COMMENTS**

I. INTRODUCTION & BACKGROUND

Otter Tail Power Company (Otter Tail Power or the Company) respectfully submits the following Reply Comments, responding to the Comments filed on April 7, 2026 by the Minnesota Department of Commerce, Division of Energy Resource's (Department), and by Fresh Energy, Union of Concerned Scientists, and the Environmental Law and Policy Center (collectively the Clean Energy Groups, or CEGs).

Otter Tail Power values review of our Transportation Electrification Plan (TEP) and resulting comments from these organizations. Formal input from these organizations frequently generates constructive informal discussions between utilities, regulators, and advocacy groups. The Company has organized our Reply Comments by responding to each party's comments separately. Section II, responds to the Department's comments and Section III is in response to CEG's comments.

II. RESPONSE TO THE DEPARTMENT'S COMMENTS

A. The Department requests that OTP, in reply comments, update tables 1 and 2 of its TEP to indicate the number of and expenditures related to level 2 charger rebates provided by the Company in the last five years and the planned rebates for the next five years.

Otter Tail Power has included Table 1 and Table 2 from our original filing, modified to include expenditures related to level 2 charger rebates for the periods requested. Table 1 summarizes total rebate costs of \$19,200 for forty-five Level 2 chargers enrolled in off-peak rates. Table 2 shows a total projected customer rebate costs of \$50,000, for an average of twenty Level 2 chargers added annually over five years (100 chargers total), all participating on off-peak rates. As shown in Table 3, we expect an average of ten Level 2 chargers enrolled annually in our already existing off-peak rates and ten Level 2 chargers to enroll annually in the new EVantage off-peak EV charging rate.

Table 1

Budget Category (Distribution, IT, Transmission, etc.)	Capital	Expenditure
MN EV DCFC Pilot service extension upgrades, test site installation	\$290,063.86*	
MN EV DCFC Pilot, Test Site	\$2,160,858.81	\$209,111.61
Marketing and Communications: Ride & Drive Events, Flyers, Education Outreach, training, level 2 charging donations.		\$100,268.16
ECO Off-Peak Level 2 Charging Rebates		\$19,200
Sub Total:	\$2,450,922.67	\$328,579.77
Total Capital and Expense:	\$2,779,502.44	

*Last site work order has not closed at this time

Table 2

Budget Category (Distribution, IT, Transmission, etc.)	Capital	Expenditure
MN EV DCFC Charging Infrastructure Upgrade*	\$2,000,000 - \$5,000,000	
Marketing and Communications:		\$50,000 - 250,000
NEVI Support	<\$50,000	
O&M Charging infrastructure		\$50,000 - \$250,000
ECO Rebates – electric vehicles, electric school buses		\$50,000 - \$450,000
ECO Off-Peak Level 2 Charging Rebates		\$50,000

*Estimate of potential upgrade cost for improving charging sites if divestment is considered a non-viable option.

Table 3

Level 2 EV Rebates for Off-Peak Rates	Actual 2021-2025 Participation	Estimated 2026-2030 Participation
EVantage	-	50
Other Off-Peak Rates	45	50

B. The Department requests that OTP discuss, in reply comments, how its Transportation Electrification portfolio addresses the requirement of Minn. Stat. § 216B.1615 subd. 3(5).

All of Otter Tail Power’s TEP initiatives aim to reduce the reliance on fossil fuels, thereby reducing greenhouse gas emissions in accordance with Minn. Stat. § 216B.1615 subd. 3(5).

All Otter Tail Power rate offerings, including our public Direct Current Fast Charger (DCFC) EV charging rates and our private level 2 off-peak EV charging rates, promote off-peak or low-cost charging. Low-cost charging hours occur within the Midcontinental Independent System Operator (MISO), when renewable resources are producing energy at high levels. Because of the strong energy output by renewable resources, the MISO localized marginal prices are driven lower, allowing affordable EV charging, displacing emission producing electric generation. The Company also retires renewable energy credits (RECs) annually, for all energy consumed at our public DCFC chargers, further supporting the development of emission free energy.

In addition to the Company’s emission reducing rate offerings, we offer EV rebates, through our 2024-2026 Energy Conservation and Optimization (ECO) portfolio¹, to customers who purchase an EV. The Company’s EV rebates and supporting program benefits have been reviewed and approved by the Department. The Company calculates that each EV displacing a traditional internal combustion engine vehicle, also displaces 5.64 short tons of CO2 annually. Based on February 2026 Minnesota EV registration data², Otter Tail Power has 326 electric vehicles in our Minnesota service territory. We calculate that over 1,838 short tons of CO2 are displaced annually from our customers’ EV usage.

¹ Docket No. E017/CIP-23-094

² <https://mn.gov/puc/activities/economic-analysis/electric-vehicles/>

C. The Department requests that OTP, in reply comments, explain the range of anticipated future transportation electrification spending depicted in its Table 2.

The spending estimates in Table 2 reflect several scenarios based on early estimates and projections of the fate of our DCFC network. At the low end of the range, the Company could incur minimal maintenance costs, if the Company is ordered to conclude the pilot program and divest the related infrastructure or pay for removal if equipment is end of life.

A medium range scenario includes the possibility of keeping the existing DCFC infrastructure, maintaining it, and staying with the same or similar cost network provider. The scenario relies heavily on existing equipment not having major failures, and the existing service providers remaining in the EV maintenance and networking marketplace. This scenario is ideal for cost management, but in 2025 we experienced two of our vendors withdrawing from providing these services, thereby creating temporary gaps in our DCFC network.

At the high end of the range, the Company could pursue reinvestment by proposing upgrades to aging equipment. Under this scenario, options under evaluation include new equipment, enhanced networking, and revised maintenance models that would replace current rates with a cost structure more closely tied to energy sales. Tying maintenance and networking costs to energy sales allows expenses to scale more efficiently, strengthens long-term cost control, and may reduce the need for ongoing subsidies beyond the initial capital investment. At this time, the Company is monitoring conditions and is not proposing any changes beyond operating our current DCFC network.

The wide range for potential ECO Rebate and Marketing expenditures largely depends on rebate levels and the sensitivity of participation rates. Small shifts in customer uptake can generate significant budget volatility. Current draft estimates suggest ECO rebates could range from \$2,000–\$5,000 per electric vehicle and approximately \$25,000 per electric school bus. This area is also especially challenging to forecast because federal and state tax incentive programs are drivers of customer participation and can be offered or terminated depending on election outcomes.

D. The Department requests that OTP, in reply comments, provide a five-year cost-benefit projection of its DCFC fleet, detailing rural-specific fixed and variable maintenance costs alongside targeted utilization strategies to improve revenue ratios. This analysis must include a clear roadmap toward financial self-sufficiency to protect non-EV-driving ratepayers from long-term O&M subsidies.

On February 1, 2019, in the matter of a Commission Inquiry into Electric Vehicle Charging and Infrastructure³, the Minnesota Public Utilities Commission (Commission)

³ Docket No. E-999/CI-17-879

issued an Order providing evaluation guidance for utilities proposing EV-related programs and investments. As stated in the Commission’s October 27, 2020, Order⁴ approving Otter Tail’s DCFC network. The Commission summarized their February 1, 2019 Order by stating:

“The Commission encouraged utilities to include in their individual proposals a cost-benefit analysis to examine long-term ratepayer and societal benefits, as well as potential costs, but the Commission did not adopt a particular cost-benefit methodology. Further, the Commission determined that cost recovery proposals should be decided on a case-by-case basis considering various factors, such as the purpose, nature, magnitude, and potential benefits of the investment.”

The Company recognizes the importance of providing a cost-benefit analysis and is committed to reporting all costs and benefits in compliance with the Commission’s guidance when more information on performance of our DCFC network is available. The Company has only recently completed the installation of its final DCFC site in Bemidji, MN. The Company will be better positioned to conduct a comprehensive cost-benefit analysis once we can gather two years of usage data across all locations. The Company plans to include this analysis and associated data in the Company’s next TEP, as well as the Company’s annual June 1 pilot filing updates⁵.

Otter Tail Power also believes that DCFC investments should not be assessed in isolation, but rather as part of a comprehensive electrification strategy that encompasses the full portfolio of TEP initiatives. The State’s overarching policy objective is to reduce greenhouse gas emissions from transportation through increased adoption of electric vehicles ⁶ ⁷, with a goal for 20 percent of light-duty vehicles registering in Minnesota to be EVs by 2030⁸. Achieving this objective depends on the coordinated advancement of three interdependent elements: (1) widely available public charging infrastructure, (2) access to residential/commercial/fleet charging, and (3) measures to address upfront vehicle cost barriers. These elements operate as an integrated system; placing disproportionate emphasis on cost-effectiveness in any single area risks undermining the effectiveness of the overall framework. Similarly, evaluating individual programs without recognizing how complementary initiatives enable and reinforce their benefits may result in an incomplete assessment of their value.

This integrated perspective does not diminish the Company’s awareness of long-term operations and maintenance costs associated with DCFC infrastructure. Rather, the Company emphasizes that the DCFC infrastructure represents a limited pilot intended to support data gathering, inform rate development, and accelerate electric vehicle

⁴ Docket No. E-017/M-20-181

⁵ Docket No. E-017/M-20-181

⁶ <https://www.lrl.mn.gov/docs/2019/other/190972.pdf>, pages 14-17.

⁷ <https://sustainability.mn.gov/pages/fleet>

⁸ <https://www.dot.state.mn.us/measures/electric-vehicles.html>

adoption. As vehicle adoption increases, DCFC utilization is expected to rise, improving the long-term economics of these assets. The Company anticipates that the point at which DCFC investments approach breakeven on a standalone basis will align with increased participation by third-party investors.

To date, outside of federal or state incentive programs, Tesla remains the only third party to have made significant DCFC investments without public funding, driven by the direct linkage between charging availability and vehicle sales. This underscores the current market limitations and the role pilot investments can play in advancing broader EV infrastructure readiness.

E. The Department requests that OTP, in reply comments, provide the expected customer count, expected load shift, expected avoided system costs associated with the proposed EV Load Management Rate.

As shown in Table 4, the Company is forecasting the addition of 10 customers to the new EV Load Management Rate (EVantage) annually. By 2030, the Company is anticipating 50 participants on this new rate, resulting in a shift of 355.9 kW and \$49,843 of cumulative benefits stemming from avoided system costs in 2030. Looking further ahead, customer participation is expected to continue to grow beyond this point as electric vehicle registrations in the Company’s service territory grow year over year.

Table 4

	2026	2027	2028	2029	2030
Avoided Electric Capacity	\$ 7,868	\$ 15,736	\$ 24,077	\$ 32,744	\$ 41,749
Avoided T&D	\$ 1,438	\$ 2,963	\$ 4,578	\$ 6,287	\$ 8,094
Participants	10	20	30	40	50
kW Reduction	71.2	142.4	213.5	284.7	355.9

* Table 4 includes forecasted participant numbers, kW reduction and avoided costs for only the new EV Load Management Rate (EVantage).

F. Clarification regarding Department comments in J.4.3 Forecasting and Medium/Heavy-Duty Adoption

The Department states in their comments, “The Department cautions that applying a statewide growth metric to the Company’s predominantly rural service territory likely overstates near-term adoption. Specifically, the Company’s “Medium” growth scenario relies on a 37 percent year-over-year growth rate derived from statewide

Minnesota Department of Transportation (MnDOT) registration data.”

To clarify, Otter Tail Power’s electric vehicle registration data and growth metric of 37 percent, used to create Figure A from the Company’s initial filing, was based on registration data specific to Otter Tail Power, as provided⁹ by the Minnesota Public Utility Commission from Minnesota Department of Transportation data. The data below, in Table 5, highlights the electric vehicles served by Otter Tail Power and the Year-Over-Year growth.

Table 5

Registration Year	Electric Vehicles Served by Otter Tail Power	YOY Growth
2024	270	
2023	194	39.2%
2022	145	33.8%
2021	104	39.4%
	Average	37.5%

III. RESPONSE TO THE CEG’s COMMENTS

G. Provide Further clarification and detail about anticipated ECO spending and programming in its reply comments, including information regarding its plans for multifamily and low-income EV charging programs as well as its re-evaluation of existing rebates.

The questions posed in G and J are closely aligned. Accordingly, the Company addresses the ECO low-income program in its reply comments to G and the ECO load management program in its reply comments to J.

Total spending on Low-Income programs for the Company’s 2027-2029 ECO plan, is projected to be approximately \$650,000 annually. However, the share of funding that will be dedicated toward EV charging programs has not been established at this time. Final budgetary figures are currently being finalized as program evaluations are completed. The Company continues our focus of meeting savings goals with a highly cost-effective and inclusive program portfolio. This is discussed more in response to comment K below.

As part of our multifamily-focused initiatives, the Company is piloting a Level 2 charging solution at our own facilities. The new solution demonstrates the potential for lower upfront installation costs, and reduced ongoing expenses through a simplified, volumetric-based networking fee that can share revenues with the charger owner. The

⁹ <https://mn.gov/puc/activities/economic-analysis/electric-vehicles/>

solution provides a transparent and straightforward mechanism for passing energy costs through to end users, helping drive property owner buy-in, particularly in scenarios where a single shared meter serves multiple residential parking locations.

H. Provide more information on timeline for commercial Level 2 rate.

The timeline for developing a rate will depend on approval of a Commercial Level 2 program in the Company's Energy Conservation and Optimization (ECO) triennial filing. The Company is closely monitoring the outcome of Xcel Energy Docket No. E-G002/CIP-23-92 and reviewing the Department's comments issued on April 7, 2026, as well as other stakeholder comments. The Department has identified two key concerns with Xcel's proposal, both related to the measure's baseline being defined as gasoline.

If it's determined that a gasoline baseline is inappropriate and requires a deviation to a standard Level 2 charger, Xcel Energy's proposal will no longer qualify under the Energy Conservation and Optimization Program – Efficient Fuel Switching (EFS), resulting in a substantial reduction in claimed savings and potentially eliminating the program.

Outside of EFS, the only remaining pathway to claim savings would be through a load management approach. However, the currently estimated load profile for Commercial Level 2 charging is not compatible with the Company's existing load management practices while meeting a reasonable customer experience. As a result, ECO options would be unavailable to support incentives or actively promote Commercial Level 2 charging.

I. Provide detail regarding the timeline, budget, and scope of DCFC make-ready potential program. (Electrical Service Agreement extension)

As noted in the response to question H, the timeline of a DCFC make-ready type incentive option will depend on the Company's 2027-2029 ECO triennial filing. ECO remains an effective mechanism for funding and cost recovery of program expenses. ECO is reviewed annually, allowing for adjustments based on program learnings and customer participation. The initial scope will likely include an incentive to offset customer-side-of-the-meter costs, similar in structure to Xcel's public charging EV pilot, but without Company ownership of equipment or construction responsibilities beyond standard electric service practices.

J. Provide more detail regarding the nature of upcoming ECO programming for multifamily EV and low-income charging.

The Company is presently completing the development of our 2027-2029 ECO triennial portfolio, with a filing scheduled for June 1, 2026. At this time, off-peak Level 2 electric vehicle charging will be proposed, as a measure within the Company's load management programming. Low-income and multifamily electric vehicle charging options are not separate measures included in load management. If a study demonstrates a higher coincidence factor or increased usage that supports greater claimed kW savings for Level 2 chargers for these customer types, the Company could offer higher rebates under the load management portfolio. This approach would also avoid competition for funding, as noted in responses G and K. However, at this time this customer type simply qualifies for the same rebate of \$500/hardwired Level 2 charger and the electrical panel rebates if served on a qualifying off peak rate. These rebates combine for up to \$2,500 in incentives to install an off-peak electric vehicle charger. This covers a significant portion of the costs of a typical installation without any enhancements or additions to the existing programs.

K. The CEG recommend that OTP offer enhanced rebates for EVs and ESBs for underserved communities in its next ECO Triennial.

The Company added electric vehicle incentives to the 2026 ECO Efficient Fuel Switching Low-Income Programming through a modification filing in Docket No. E017-CIP-23-94, submitted on October 3, 2025, and approved on January 2, 2026. A higher than standard electric vehicle incentive will be proposed in the Low-Income Programming in our upcoming ECO triennial filing for the 2027–2029 program years.

Low-income program funds are limited and highly competitive. As a result, the Company plans to continue offering an electric school bus incentive for all Otter Tail Power communities, but we are not planning to introduce an additional incentive specifically targeted to underserved communities at this time. As stated previously the Company is committed to exceeding our low-income spending requirements and we will be proposing a \$650,000 annual budget in this area. The Company is concerned that a significant portion of these limited dollars going to, higher than standard, EV bus incentives, will reduce dollars going to other much needed low-income programming.

IV. CONCLUSION

Otter Tail Power appreciates the review and constructive feedback provided by the Department and the Clean Energy Groups and submits these Reply Comments to clarify our Transportation Electrification Plan, address specific data and policy questions, and further explain the practical considerations influencing program design and cost projections. As demonstrated herein, the Company's transportation electrification portfolio is aligned with Minnesota's statutory greenhouse gas reduction objectives and is structured to promote off-peak charging, manage system costs, and support increased electric vehicle adoption across our predominantly rural service territory.

The Company has responded directly to requests for additional data and explanations of future spending scenarios, while reiterating the importance of evaluating DCFC investments and related initiatives as part of an integrated, portfolio-based electrification strategy rather than in isolation. Otter Tail Power remains committed to prudent cost management, learning from pilot programs, and adapting our offerings as market conditions, technology, and regulatory guidance evolve. The Company looks forward to continued engagement with the Commission, the Department, CEG, and other stakeholders as it advances transportation electrification in a manner that is cost-effective, scalable, and responsive to Minnesota's long-term energy and environmental goals.

Dated: May 12, 2026

Respectfully submitted,
