August 2025

EXECUTIVE SUMMARY

Minnesota Power and American Transmission Company, LLC by and through its corporate manager ATC Management Inc. (“ATC”) (collectively, the “Applicants”) are proposing to construct the Iron Range – St. Louis County – Arrowhead 345 kilovolt (“kV”) Transmission Project (also the “Project” or “ISA Project”) located in Itasca and St. Louis Counties, Minnesota. The Applicants contracted with Merjent, Inc. (Merjent) to conduct a Phase Ia literature review to identify previously conducted surveys, recorded historic structures, and recorded archaeological sites within 1 mile (Study Area) of the Project. In July and August 2025, Merjent conducted a literature review of cultural resources reports, archaeological sites, historic cemeteries, and historic architectural resources within the Study Area, provided by the Minnesota State Historic Preservation Office and Office of the State Archaeologist, as well as nineteenth-century General Land Office maps, historical atlases, and historical aerial photography.

The Phase Ia literature review identified 3 previous surveys, 36 historic architectural structures, 4 recorded archaeological sites, and 4 reported historic cemeteries within the Study Area. Of these surveys and cultural resources, 3 previous surveys, 10 historic architectural structures, 2 recorded archaeological sites, and 2 reported historic cemeteries intersect the Project (see Figure 4 in Appendix A).

1.0 PROJECT DESCRIPTION

Minnesota Power and American Transmission Company, LLC by and through its corporate manager ATC Management Inc. ("ATC") (collectively, the "Applicants are proposing to construct the Iron Range - to St. Louis County – Arrowhead 345 kV Transmission Project (Project) located in Itasca and St. Louis Counties, Minnesota (see Table 1.0-1 below and Figure 1 in Appendix A). The proposed Project consists of the construction of a new, approximately 62-mile-long, single-circuit 345-kV transmission line on double-circuit capable structures from Minnesota Power's Iron Range Substation in Itasca County, Minnesota to Minnesota Power's St. Louis County Substation. The Project also involves construction of a new, approximately 1-mile, double-circuit 345-kV transmission line from Minnesota Power's St. Louis County Substation to the ATC Arrowhead Substation in St. Louis County, Minnesota.

TABLE 1.0-1

Sections Containing the Project

County	Township	Range	Sections
St. Louis	51N	17W	18–20, 29, 32
St. Louis	51N	18W	7–13
St. Louis	51N	19W	7–12
St. Louis	51N	20W	2–4, 11, 12
St. Louis	52N	20W	6–8, 16, 17, 20–22, 27, 28, 33, 34
St. Louis	53N	20W	19, 30, 31
St. Louis	53N	21W	4, 9, 10, 13–15, 22–25, 36
St. Louis	54N	21W	31–33
Itasca	54N	22W	18–21, 26–28, 35, 36
Itasca	54N	23W	2, 3, 11–13, 24
Itasca	55N	23W	16, 19, 20, 27–30, 33–35

The Project consists of two primary segments:

1. Segment 1 – Approximately 32 miles of new single circuit 345 kV line on double circuit capable structures, to be built adjacent to existing high voltage transmission lines owned by Minnesota Power from the existing Iron Range Substation to north of the St. Louis River.

2. Segment 2 – Replace an approximately 33.5 miles of 230 kV line from north of the St. Louis River to the existing Arrowhead Substation along existing high-voltage transmission lines right-of-way using double-circuit 345 kV structures.

There will also be expansions at the Iron Range Substation, St. Louis County Substation, and Arrowhead Substation.

The Applicants contracted with Merjent, Inc. (Merjent) to conduct a Phase Ia literature review to identify previously conducted surveys, recorded historic structures, and recorded archaeological sites within 1 mile (Study Area) of the Project. In July and August 2025, Merjent conducted a literature review of cultural resources reports, archaeological sites, historic cemeteries, and historic architectural resources within the Study Area, provided by the Minnesota State Historic Preservation Office and Office of the State Archaeologist, as well as nineteenth-century General Land Office maps, historical atlases, and historical aerial photography.

2.0 ENVIRONMENTAL BACKGROUND

The Project area is within the Tamarack Lowlands and North Shore Highlands Subsection of the Northern Superior Uplands section of the Laurentian Mixed Forest Province as defined by the Minnesota Department of Natural Resources (MNDNR) Ecological Classification System. The Tamarack Lowlands subsection covers the Glacial Lake Upham Plain and Aurora Till Plain geologic features. The North Shore Highlands subsection is located adjacent to Lake Superior and parallels the Highland Moraine associated with the lake, 20 to 25 miles inland. Lake Superior is the main feature in this region and moderates the climate throughout the year. Pre-settlement vegetation of this area was pine, fir, and aspen-birch forest; tamarack; and white cedar along with conifer bogs and swamps. The present land cover is still dominated by forest; therefore, forest management and recreation, along with tourism, are the primary uses (MNDNR 2025).

2.1 TOPOGRAPHY

The landscape ranges from rugged lake-dotted terrain with thin glacial deposits over bedrock to hummocky or undulating plains with deep glacial drift to large, flat, poorly drained peatlands (MNDNR 2025). Further, the Project area is in the Northern Superior Uplands Section which predominantly coincides with the Canadian Shield and is characterized by glacially scoured bedrock terrain with thin and discontinuous deposits of coarse loamy till around numerous lakes. The section has high relief, reflecting the rugged topography of the underlying bedrock. Elevations in the Project area vary from 384 to 457 meters above sea level.

2.2 GEOLOGY

The geology of the Project consists of thin glacial drift over the entire subsection and large areas of exposed bedrock near the surface. The underlying bedrock consists of Upper Precambrian basalt, rhyolite, gabbro, diabase, anorthosite, granite, sandstone, and shale (Morey and Walton 1976). Bedrock within the immediate Project corridor is part of the Animikie Group. The Animikie Group is a geologic group composed of sedimentary and metasedimentary rock and was deposited between 2,500 and 1,800 million years ago during the Paleoproterozoic Era. This group of formations is geographically divided into the Gunflint, the Mesabi, the Vermillion, and the Cuyuna Ranges. The Mesabi Range is located largely in St. Louis County.

2.3 SOILS

The Project begins in eastern Itasca County and crosses much of southern St. Louis County. Soils within these areas are diverse and exhibit primarily Alfisols, Spodisols, Inceptisols, and Entisols (Natural Resources Conservation Service 2025). Alfisols are soils that have often developed under forests and typically have moderate to high fertility for both agriculture and forestry. These soils exhibit well developed horizons. Spodisols are characterized by an accumulation of aluminum, iron, and organic matter. These soils are developed in coniferous forests and contain stratified deposits. Inceptisols are young soils with minimal horizon development. Entisols are soils of recent origin that developed in unconsolidated parent material with usually no genetic horizons except an A horizon (University of Minnesota Extension 2025).

Alfisols and Spodisols are moderately well drained and stratified, suggesting there is potential to encounter archaeological deposits in these areas. However, Holliday (2004) states that soil series mapped by the NRCS potentially provide clues but should be recognized as having considerable limitations in archaeological applications.

2.4 VEGETATION

The Project area is located in the Laurentian Mixed Forest physiographic province (MNDNR 2025). Near the Project area, the province is characterized by broad areas of conifer forest, mixed hardwood and conifer forests, and conifer bogs and swamps.

3.0 CULTURAL AND HISTORICAL OVERVIEW

Merjent, Inc. (Merjent) archaeologists conducted an archival review of the Project's area and the surrounding area within a 1-mile radius, referred to as the Study Area (see Figure 1 in Appendix A). The Project is within the Minnesota State Historic Preservation Office's (SHPO) Archaeological Sub-Regions 5c (Central Lakes Coniferous Central) and 5e (Central Lakes Coniferous East) (Gibbon et al. 2002).

3.1 PRECONTACT PERIOD (10,900 BCE TO1650 CE)

The first inhabitants of Minnesota are known as Paleoindians (10,900 to 7,500 years Before the Common Era [BCE]). These people were highly nomadic hunter-gatherers, moving in small bands in search of food and other subsistence resources; however, in the Late Glacial and Early Holocene forests of Minnesota, Paleoindians likely relied more on gathering and the hunting of a variety of smaller animals. Paleoindian sites are small and relatively ephemeral and are commonly identified with the recovery of distinctive spear tips that occur across much of North America (Gibbon et al. 2002).

The Paleoindian peoples were followed by Archaic Tradition hunter-gatherers. At the end of the Ice Age around 10,000 years BCE, the climate became warmer and drier, which led to major changes in plant and animal communities. Spruce forests followed the retreating glacial ice northward and were replaced by a new landscape comprised of extensive lakes and rivers. Many large game species became extinct. Archaic Tradition hunters-gatherers (7,500 to 500 BCE) adapted to this new environment, shifting their focus to smaller game such as deer and elk, the abundant fish and shellfish in the numerous lakes and rivers, and wild plants such as nuts and berries (Gibbon et al. 2002).

The Archaic peoples appear to have been less nomadic and lived in smaller household groups when compared with their predecessors. Archaic sites are identified by large notched and stemmed projectile points. Immense sedimentation during the early part of the Archaic, corresponding with the Early and Middle Holocene periods, resulted in many Archaic Tradition sites being deeply buried under river valley deposits; therefore, these sites are not usually evident in surficial contexts (Gibbon et al. 2002).

The Woodland Tradition followed the Archaic Tradition. In Minnesota, the Woodland culture is separated into two periods: the earlier Initial Woodland period (circa 500 BCE to 500 years into the Common Era [CE]) and the later Terminal Woodland period (500 to 1650 CE) (Gibbon et al. 2002).

The frequent surficial expression of Woodland site locations, coupled with burial mounds that frequently mark their place, has resulted in more frequent documentation and excavation of Woodland sites. Due to this higher frequency of identification, many Woodland sites have also been grouped into specific regional archaeological cultures (Gibbon et al. 2002; Gibbon 2012).

The Initial Woodland period is primarily marked by the emergence of precontact ceramic traditions and burial mounds. Regional archaeological cultures of the Initial Woodland period include Howard Lake, Malmo, Elk Lake, and Laurel (Gibbon et al. 2002; Gibbon 2012).

The Terminal Woodland period has been defined throughout eastern and central Minnesota, the Red River Valley, and portions of the Dakotas (Gibbon 2012). During this time period, populations began to increase, which in turn led to an increase in size and number of precontact sites. Burial mounds became more prevalent, and the cultural material artifacts began shifting to smaller, unnotched triangular projectile points and thinner ceramic vessels that were more globular in shape. Agriculture and wild rice harvests also increased (Gibbon et al. 2002; Gibbon 2012).

In the northern portion of the state, ceramic types and burial practices indicate specific regional archaeological cultures, including Kathio, Blackduck, and Psinomani. In the southern portion of the state, primarily comprised of deciduous forests and prairie, some cultures adopted the cultivation of maize and the construction of effigy burial mounds (Gibbon et al. 2002; Gibbon 2012).

Around approximately 1,000 CE, Mississippian populations from Cahokia, near present-day St. Louis, Missouri, began to extend their influence northward into the Upper Mississippi River Valley, and evidence suggests that there were attempts at colonization. Archaeologists tend to regard some southern Minnesota Terminal Woodland cultures as the northern expression of a "Mississippian" lifeway distinguished by distinctive ceramic styles, larger and more diverse artifact assemblages, and evidence of maize production. In southern Minnesota, three Mississippian complexes have been identified: Silvernale, Oneota, and Plains Village (Gibbon et al. 2002). It was the Mississippian peoples in the south and the Terminal Woodland peoples in the north who had contact with the first Europeans to explore Minnesota in the mid-seventeenth century (Gibbon et al. 2002; Gibbon 2012).

3.2 CONTACT PERIOD (1650 TO 1837 CE)

Euro-American fur traders and settlers encountered the Dakota (also known as Sioux) and Ojibwe (also known as Chippewa) Native American peoples when they moved into traditional lands in what is now Minnesota. Several other Native American tribes, including the Assiniboine, moved west in the early 1600s, soon after the explorers and traders entered the region (Holmquist 1981). The Dakota lived in village-centered societies in the southern portion of Minnesota while the Ojibwe were organized into independent migratory bands in the northern portion of Minnesota (Gibbon 2012:205).

The first written European accounts about the Ojibwe appear in Jesuit diaries published in collected form as *The Jesuit Relations and Allied Documents 1610-1791* (Thwaites 1898). The documents are so detailed in their descriptions of Native Americans and their cultures, they are considered ethnographic accounts. Following the Jesuits, French explorers and trappers traveled portions of Minnesota in the seventeenth century and established a fur trading economy with local native populations, including the Dakota and Ojibwe. Early trading posts were established along the lower Mississippi River, and the first French fort was established in 1700 near present day Mankato. The fur trade resulted in the Ojibwe becoming reliant on traded goods rather than the clothing, utensils, and weapons they had traditionally constructed.

In the early eighteenth century, the French began to move their fur trade north into Canada. Over the next 100 years, the Ojibwe and French established strong relationships, and the French embraced Ojibwe culture, learned the language, and married into Ojibwe families. Territorial

disputes, competition, and shifts in political alliances eventually led to the French and Indian War (1754 to 1763). The Ojibwe sided with the French against the British in the final Colonial War fought between 1689 and 1763, which culminated with the French and Indian War. At the end of the French and Indian War, the 1763 Treaty of Paris resulted in the French ceding all land east of the Mississippi River in the New World to the British (Fond du Lac Band of Lake Superior Chippewa 2018). The French had already ceded the land west of the Mississippi River to Spain with the 1762 Treaty of Fontainebleau, but the transfer was not publicly announced until 1764. The region was retroceded to France under the terms of the 1800 Third Treaty of San Ildefonso and the 1801 Treaty of Aranjuez then was transferred to the United States in 1803 by the Louisiana Purchase (World History Project 2018). Although the United States purchased the land, the Dakota, Ojibwe, and several other Native American groups maintained sovereignty, resulting in numerous subsequent treaties with the United States.

After the Treaty of Paris in 1763, the British quickly set up fur trading posts throughout Minnesota. The British fur trading economy was centered at Grand Portage, where traders would bring their furs and leave with other valuable trade goods. Jonathon Carver explored the upper Mississippi River in the 1760s. After the Revolutionary War of 1776, competition between the United States and British companies intensified throughout Minnesota. In 1803, the Louisiana Purchase established United States lands extending from the Atlantic to the Rocky Mountains. The War of 1812 saw a demise in the British fur traders due to the United States denying business licenses to British traders (Dobbs 1989).

Early British and United States citizens conducted the first fully documented land survey of Minnesota in the mid-eighteenth and early-nineteenth centuries. By 1806, Zebulon Pike had explored portions of the Mississippi River. Missionaries began to arrive in the early nineteenth century, primarily along the Minnesota River. The American Fur Company was founded by John Jacob Astor in 1811, after which numerous fur trading posts were quickly established throughout the state. At the confluence of the Minnesota and Mississippi Rivers, Fort Snelling was constructed in 1819 to protect the new United States' investments in the area. Large-scale fur trade resulted in a major decline in the native beaver populations, and by 1842, the fur trade in Minnesota came to an end when the American Fur Company came to its demise (Dobbs 1989). After the passing of the fur trading industry, land was opened to Euro-American settlers.

4.0 METHODS

The literature search included an analysis of protected datasets on file at the SHPO and the Minnesota Office of the State Archaeologist (OSA) for the Study Area. Sections included in the Study Area are shown in Table 4.0-1 below. The OSA maintains a secure online dataset of known and suspected archaeological sites (OSA Portal), which is regularly updated and referenced. Mr. Kevin Mieras reviewed the OSA Portal files and archived copies of site forms for all known archaeological sites, and he reviewed the Minnesota State Historic Inventory Portal (MnSHIP) for all recorded historic architectural structures within the Study Area. Additionally, on July 22, 2025, Mr. Mieras reviewed previous survey reports for Itasca and St. Louis Counties on file at the SHPO office in St. Paul, Minnesota.

TABLE 4.0-1

Sections Included in the Study Area

County	Township	Range	Sections
St. Louis	49N	15W	5, 6
St. Louis	49N	16W	1, 2
St. Louis	50N	15W	19, 29–32

TABLE 4.0-1

Sections Included in the Study Area

St. Louis	50N	16W	6-9, 14-30, 33–36
St. Louis	50N	17W	1–16, 23, 24
St. Louis	51N	17W	6–8, 16–21, 26–35
St. Louis	51N	18W	1–18, 23–25
St. Louis	51N	19W	1–18
St. Louis	51N	20W	1–5, 7, 9–15
St. Louis	52N	20W	5–9, 15–23, 26–29, 32–35
St. Louis	52N	21W	1, 12, 13
St. Louis	53N	20W	7, 17–20, 29–32
St. Louis	53N	21W	3–17, 21–27, 35, 36
St. Louis	54N	21W	27–34
Itasca	53N	22W	1–3, 12
Itasca	54N	22W	6, 7, 16–36
Itasca	54N	23W	1–4, 10–14, 23–25
Itasca	55N	23W	16–22, 26–36

Merjent also reviewed nineteenth-century General Land Office (GLO) maps and notes on file with the Bureau of Land Management (BLM) (BLM 2025), historical atlases, and aerial photographs from 1939 to present provided on the OSA Portal and Google Earth (2025).

Geographic information system shapefiles of archaeological survey locations and archaeological site boundaries are not available from SHPO or OSA, so Merjent digitized previous site locations based on digital files provided by SHPO and available on the OSA Portal. In addition, Mr. Mieras reviewed background materials on file at Merjent and publicly available data sources available online for information about Itasca and St. Louis Counties and the ecological setting of the Study Area.

5.0 LITERATURE REVIEW RESULTS

In July and August 2025, Merjent conducted a Phase Ia literature review for the Study Area. Merjent reviewed archaeological site forms from the OSA Portal, archaeological survey reports provided by SHPO, and historic architectural structures provided on MnSHIP. Additionally, nineteenth-century GLO maps, historic plat maps, and historic aerial photography were reviewed. The results of the Phase Ia literature review are provided below.

5.1 PREVIOUS SURVEYS

The review of files on file at SHPO indicates that three previous archaeological surveys have been conducted within the Study Area (see Table 5.1-1 and Figure 2 in Appendix A). These surveys were conducted in support of electrical transmission line improvements. All three surveys intersect small portions of the Project, but the majority of the Project has not been previously surveyed.

TABLE 5.1-1

Previously Conducted Archaeological Surveys in the Study Area

Report Number	Title	Authors	Year	Figure 2 Page(s)

5.2 PREVIOUSLY RECORDED ARCHITECTURAL STRUCTURES

The results of the MnSHIP review indicated there are 36 recorded historic architectural structures in the Study Area (see Table 5.2-1 and Figure 2 in Appendix A). One recorded historic architectural structure has been listed on the National Register of Historic Places (NRHP); the Frank Gran Farmstead (IC-UOG-00017) is located approximately 0.75 mile southwest of the Project. Ten of the recorded structures intersect the Project (see Figure 4 in Appendix A). The structures that intersect the Project include five railroads, three highways, and two bridges. Two of these structures (XX-RRD-CNR001 and XX-RRD-DMR008) are eligible for listing to the NRHP. The remaining structures are unevaluated or have been determined not eligible.

TABLE 5.2-1

Previously Recorded Architectural Structures within the Study Area

Structure Number	Structure Name	Historic Function/Use	Address	NRHP Eligibility	Figure 2 Page(s)
IC-GLD-00004	Log Structures	Domestic Single Dwelling	off Mn. Hwy. 65	Unevaluated	2.3

* Intersects Project

5.3 PREVIOUSLY RECORDED ARCHAEOLOGICAL SITES

According to the OSA Portal, there are four recorded archaeological sites within the Study Area (see Table 5.3-1 below and Figure 2 in Appendix A). All four sites remain unevaluated for listing to the NRHP. The OSA considers sites 21SLaq, 21SLar, and 21SLat as alpha sites, which are reported archaeological resources that have not been confirmed by a professional archaeologist. Sites 21SL1274 and 21SLat intersect the Project (see Figure 4 in Appendix A). According to the MnModel (Phase 4) Survey Implementation Model (Minnesota Department of Transportation 2020), the Project area is primarily within an area of Unknown Potential/Poorly Surveyed with small areas of Low Site Potential/Well Surveyed.

TABLE 5.3-1

Previously Recorded Archaeological Sites in the Study Area

Site Number	Site Name	Context/Type	Township	Range	Section(s)	NRHP Eligibility	Figure 2 Page(s)
21SL1274*	None	Historic Domestic	[redacted]	[redacted]	[redacted]	Unevaluated	2.17
21SLaq	None	Trading Post	[redacted]	[redacted]	[redacted]	Unevaluated	2.14

* Intersects Project

5.4 HISTORICAL CEMETERIES

The Historical Cemeteries Layer provided on the OSA Portal depicts the locations of potential historic cemeteries identified within various historic documentation. Review of the OSA Portal identified four potential historic cemeteries within the Study Area (see Table 5.4-1 and Figures 2 and 4 in Appendix A). The potential locations of the Forest Hill Cemetery and the Indian Cemetery, as depicted in the OSA Portal, intersect the Project (see Figure 4 in Appendix A). Review of topographic maps and aerial photography depict the precise location of the Forest Hill Cemetery as outside of the Project area (see Figure 4.17 in Appendix A). The precise location of the Indian Cemetery was not identified, but the OSA Portal shows a portion of the Indian Cemetery as a Tribal Reservation Boundary, perhaps indicating a more precise location of the Indian Cemetery (see Figure 4.26 in Appendix A). The potential locations of the Cedar Valley Cemetery and the Solway Cemetery are located outside of the Project area and will not be impacted.

TABLE 5.4-1

Potential Historic Cemeteries in the Study Area

Cemetery Name	Township	Range	Section(s)	Figure 2 Page(s)
Cedar Valley Cemetery	[redacted]	[redacted]	[redacted]	2.5, 2.6
Solway Cemetery	[redacted]	[redacted]	[redacted]	2.15, 2.16
Forest Hill Cemetery*	[redacted]	[redacted]	[redacted]	2.8
Indian Cemetery*	[redacted]	[redacted]	[redacted]	2.12

5.5 HISTORICAL MAP REVIEW

Merjent reviewed nineteenth-century GLO maps and notes on file with the BLM (2025), aerial photographs taken between 1939 and present, and historical plat maps from 1916 (W.W. Hixon & Co.1916a, 1916b). The GLO maps from 1857 to 1874 for the Study Area show the majority of the Study Area as a mosaic of wetlands and upland areas (see Figure 3 in Appendix A). Named natural features include the Cloquet River, the Floodwood River, and the St. Louis River. One historic feature was identified within the Study Area. This feature consists of a roughly east-west trending unnamed trail or road in Sections 35 and 36 of Township 50 North, Range 16 West (see Figure 3.17 in Appendix A). This feature does not intersect the Project. No other historic features, including the Indian Cemetery described in Section 5.4, were identified within the GLO maps.

The historical aerial photographs from 1939 to present show the Study Area much as it is today. Some of the present road systems were already present in 1939, and many faint linear features, presumably logging roads, are evident within upland wooded area throughout the Study Area. Occasional farmsteads and agricultural fields were also identified as early as 1939.

Review of historical atlases from 1916 show the general area as parceled out to primarily private landowners, with occasional structures within the Study Area. The most common landowner of note is the Duluth & Iron Range Railway Company who owned numerous parcels throughout the Study Area (W.W. Hixson & Co. 1916a, 1916b).

6.0 SUMMARY AND RECOMMENDATIONS

The Phase Ia literature review identified 3 previous surveys, 36 historic architectural structures, 4 recorded archaeological sites, and 4 reported historic cemeteries within the Study Area. Of these surveys and cultural resources, 3 previous surveys, 10 historic architectural structures, 2 recorded archaeological sites, and 2 reported historic cemeteries intersect the Project (see Figure 4 in Appendix A).

Mandy Bohnenblust
Merjent, Inc.

RE: Natural Heritage Review of the proposed ISA Transmission Line Project,
Itasca and St. Louis Counties

Dear Mandy Bohnenblust,

For all correspondence regarding the Natural Heritage Review of this project please include the project ID **MCE-2025-00541** in the email subject line.

As requested, the Minnesota Natural Heritage Information System has been reviewed to determine if the proposed project has the potential to impact any rare species or other significant natural features. Based on the project details provided with the request, the following rare features may be impacted by the proposed project:

Ecologically Significant Areas

- The Minnesota Biological Survey (MBS) has identified 13 Sites of Biodiversity Significance within the vicinity of the proposed project. One is *Outstanding*, four are *High*, and eight are *Moderate*. Sites of Biodiversity Significance (MBS Sites) have varying levels of native biodiversity and are ranked based on the relative significance of this biodiversity at a statewide level. Factors taken into account during the ranking process include the number of rare species documented within the site, the quality of the native plant communities in the site, the size of the site, and the context of the site within the landscape. There are also 36 Native Plant Communities (NPCs) in or near the proposed project area. **The DNR recommends avoidance of MBS Sites ranked *High* or *Outstanding* and NPCs ranked S1-S3.** A Conservation Planning Report, which includes a list of MBS Sites and NPCs in the proposed project area, has been created and uploaded to the project page (2025-09-03-ISATransmissionLine-CRP).

  MBS Sites of Biodiversity Significance and DNR Native Plant Communities can be viewed using the Explore page in Minnesota Conservation Explorer (MCE) or their GIS shapefiles can be downloaded from the MN Geospatial Commons. Reference the MBS Site Biodiversity Significance and Native Plant Community websites for information on interpreting the data. To receive a list of MBS Sites of Biodiversity Significance and DNR Native Plant Communities in the vicinity of your project, create a Conservation Planning Report using the Explore page in MCE.

- If the Wetland Conservation Act (WCA) is applicable to this project, please note that native plant communities with a Conservation Status Rank of S1 through S3 or wetlands within *High* or *Outstanding* MBS Sites of Biodiversity Significance may qualify as Rare Natural Communities (RNC) under WCA. Minnesota Rules, part 8420.0515, subpart 3 states that a wetland replacement plan for activities that modify a RNC must be denied if the local government unit determines the proposed activities will permanently adversely affect the RNC. If the proposed project includes a wetland replacement plan under WCA, please contact your DNR Regional Ecologist for further evaluation. Please visit WCA Program Guidance and Information for additional information, including the RNC Technical Guidance.

State-listed Species

- Several state-listed plant species have been documented within the vicinity of the proposed project; these are listed in the table below. As detailed above, the project overlaps with many areas of ecological significance which are more likely to contain habitat for state-protected species. Minnesota's Endangered Species Statute (*Minnesota Statutes*, section 84.0895) and associated Rules (*Minnesota Rules*, part 6212.1800 to 6212.2300 and 6134) prohibit the take of threatened or endangered species without a permit. **To demonstrate avoidance, a qualified surveyor will need to determine if suitable habitat exists within the activity impact area and, if so, conduct a survey prior to any project activities.** Except for montane yellow-eyed grass, these species are unlikely to occur in the currently maintained utility right-of-way but may have suitable habitat if the project impacts areas outside of that.

  The goal of the habitat assessment is to identify potential locations where endangered (END) and threatened (THR) species may occur to help formulate an avoidance plan or to determine the need for a permit to take. Species of special concern (SPC) are also rare and an important component of Minnesota's natural heritage; we strongly encourage project alternatives that avoid or minimize impacts to these species as well.

Common Name	Scientific Name	MN Status	Habitat
Narrow Triangle Moonwort	*Botrychium angustisegmentum*	THR	Mesic Hardwood Forest
Goblin Fern	*Botrychium mormo*	THR	Mesic Hardwood Forest
Cuckoo Flower	*Cardamine pratensis*	THR	Forested Rich Peatland, Non-forested Rich Peatland
Lapland Buttercup	*Ranunculus lapponicus*	SPC	Forested Rich Peatland
Barren Strawberry	*Waldsteinia fragarioides*	SPC	Mesic Hardwood Forest, Fire Dependent Forest
Montane Yellow-eyed Grass	*Xyris montana*	SPC	Non-forested Rich Peatland, Non-forested Acid Peatland

  Surveys must be conducted by a qualified surveyor and follow the standards contained in the Rare Species Survey Process and Rare Plant Guidance. Visit the Natural Heritage Review page for a list of certified surveyors and more information on this process. Survey proposals should be submitted to Reports.NHIS@state.mn.us prior to initiating survey work. Project planning should take into account

that any botanical survey needs to be conducted during the appropriate time of the year, which may be limited. Please consult Review.NHIS@state.mn.us if you have any questions regarding this process.

- The American goshawk (*Accipiter atricapillus*), a state-listed bird species of special concern, has been documented in the vicinity of the proposed project. This species is found in large, older upland forests systems. They are impacted by fragmentation, loss of forest diversity, and decrease in mature trees. If there is any tree removal associated with the proposed project, we recommend trees be inspected for nests prior to being cut down between April 1 and August 15.

- Trumpeter swans (*Cygnus buccinator*), a state-listed species of special concern, have been documented nesting in the vicinity of the proposed project. During the breeding season, trumpeter swans select small ponds and lakes with extensive beds of cattails, bulrush, sedges, and/or horsetail. Ideal habitat includes about 100 m of open water for take-off, stable levels of unpolluted water, emergent vegetation, low levels of human disturbance, and the presence of muskrat (*Ondatra zibethicus*) houses and American beaver (*Castor canadensis*) lodges for use as nesting platforms. If any of the wetlands on site provide suitable habitat, swans may choose to nest in these wetlands. The DNR recommends avoiding construction activities during the nesting season, April 15 through June 15, near suitable nesting habitat.

- Pugnose shiner (*Miniellus anogenus*), state-listed as threatened, has been found in the Floodwood River near the proposed project. The pugnose shiner prefers clear, low velocity lakes and streams with an abundance of submerged vegetation such as eelgrass, Canadian elodea, pondweed, and muskgrass. This species is vulnerable to the removal of littoral vegetation from lakes, the invasion of Eurasian water milfoil (*Myriophyllum spicatum*), increases in eutrophication from nutrient enrichment, and increases in water turbidity. Minnesota's Endangered Species Statute (Minnesota Statutes, section 84.0895) and associated Rules (Minnesota Rules, part 6212.1800 to 6212.2300 and 6134) prohibit the take of threatened or endangered species without a permit. To protect spawning pugnose shiner, **work within the water, including crossing by vehicles, must be avoided from May 1 through July 31.** Consult with the NH Review Team (Review.NHIS@state.mn.us) if this is not feasible, as further action may be needed.

- Creek heelsplitter (*Lasmigona compressa*) and black sandshell (*Ligumia recta*), both state-listed mussel species of special concern, have been documented in the Swan, Cloquet, and St. Louis Rivers in the vicinity of the proposed project. Mussels are particularly vulnerable to deterioration in water quality, especially increased siltation. As such, effective erosion prevention and sediment control practices must be implemented and maintained near the river throughout the duration of the project and incorporated into any stormwater management plan.

- The Natural Heritage Information System (NHIS) tracks bat roost trees and hibernacula plus some acoustic data, but this information is not exhaustive. Even if there are no bat records listed nearby, all of Minnesota's bats, including the federally endangered northern long-eared bat (*Myotis septentrionalis*), can be found throughout Minnesota. During the active season (approximately April-November) bats roost underneath bark, in cavities, or in crevices of both live and dead trees. Tree removal can negatively impact bats by destroying roosting habitat, especially during the pup rearing season when females are

forming maternity roosting colonies and the pups cannot yet fly. To minimize these impacts, **the DNR recommends that tree removal be avoided from June 1 through August 15.**

- Please visit the DNR Rare Species Guide for more information on the habitat use of these species and recommended measures to avoid or minimize impacts.

Federally Protected Species

- To ensure compliance with federal law, conduct a federal regulatory review using the U.S. Fish and Wildlife Service's (USFWS) online Information for Planning and Consultation (IPaC) tool.

Environmental Review and Permitting

- Please include a copy of this letter and the MCE-generated Final Project Report in any state or local license or permit application. Please note that measures to avoid or minimize disturbance to the above rare features may be included as restrictions or conditions in any required permits or licenses.

The Natural Heritage Information System (NHIS), a collection of databases that contains information about Minnesota's rare natural features, is maintained by the Division of Ecological and Water Resources, Department of Natural Resources. The NHIS is continually updated as new information becomes available and is the most complete source of data on Minnesota's native plant communities, rare species, and other rare features. However, the NHIS is not an exhaustive inventory and does not contain the locations of all rare features in the state. Therefore, ecologically significant features for which we have no records may exist within the project area. If additional information becomes available regarding rare features in the vicinity of the project, further review may be necessary.

For environmental review purposes, the results of this Natural Heritage Review are valid for one year; the results are only valid for the project location and project description provided with the request. **If project details change or the project has not occurred within one year, please resubmit the project for review within one year of initiating project activities.** Resubmit by selecting *Clone Project as Draft* on the project page in MCE.

The Natural Heritage Review does not constitute project approval by the Department of Natural Resources. Instead, it identifies issues regarding known occurrences of rare features and potential impacts to these rare features. Visit Natural Heritage Review for additional information regarding this process, survey guidance, and other related information. For information on the environmental review process or other natural resource concerns, please contact your DNR Regional Environmental Assessment Ecologist.

Thank you for consulting on this matter and for your interest in preserving Minnesota's rare natural resources.

Sincerely,

James Drake

Natural Heritage Review Specialist
james.f.drake@state.mn.us

Subject: List of threatened and endangered species that may occur in your proposed project location or may be affected by your proposed project

To Whom It May Concern:

This response has been generated by the Information, Planning, and Conservation (IPaC) system to provide information on natural resources that could be affected by your project. The U.S. Fish and Wildlife Service (Service) provides this response under the authority of the Endangered Species Act of 1973 (16 U.S.C. 1531-1543), the Bald and Golden Eagle Protection Act (16 U.S.C. 668-668d), the Migratory Bird Treaty Act (16 U.S.C. 703-712), and the Fish and Wildlife Coordination Act (16 U.S.C. 661 *et seq.*).

Threatened and Endangered Species
The enclosed species list identifies threatened, endangered, proposed and candidate species, as well as proposed and final designated critical habitat, that may occur within the boundary of your proposed project and may be affected by your proposed project. The species list fulfills the requirement for obtaining a Technical Assistance Letter from the U.S. Fish and Wildlife Service under section 7(c) of the Endangered Species Act (Act) of 1973, as amended (16 U.S.C. 1531 *et seq.*).

New information based on updated surveys, changes in the abundance and distribution of species, changed habitat conditions, or other factors could change this list. Note that under 50 CFR 402.12(e) of the regulations implementing section 7 of the Act, the accuracy of this species list should be verified after 90 days. The Service recommends that verification be completed by visiting the IPaC website at regular intervals during project planning and implementation for updates to species lists and information. An updated list may be requested through the IPaC system by completing the same process used to receive the enclosed list.

Consultation Technical Assistance
Please refer to refer to our Section 7 website for guidance and technical assistance, including step-by-step instructions for making effects determinations for each species that might be present and for specific guidance on the following types of projects: projects in developed areas, HUD, CDBG, EDA, USDA Rural Development projects, pipelines, buried utilities, telecommunications, and requests for a Conditional Letter of Map Revision (CLOMR) from FEMA.

We recommend running the project (if it qualifies) through our **Minnesota-Wisconsin Federal Endangered Species Determination Key (Minnesota-Wisconsin ("D-key"))**. A demonstration video showing how-to access and use the determination key is available. Please note that the Minnesota-Wisconsin D-key is the third option of 3 available d-keys. D-keys are tools to help Federal agencies and other project proponents determine if their proposed action has the potential to adversely affect federally listed species and designated critical habitat. The Minnesota-Wisconsin D-key includes a structured set of questions that assists a project proponent in determining whether a proposed project qualifies for a certain predetermined consultation outcome for all federally listed species found in Minnesota and Wisconsin (except for the northern long-eared bat- see below), which includes determinations of “no effect” or “may affect, not likely to adversely affect." In each case, the Service has compiled and analyzed the best available information on the species’ biology and the impacts of certain activities to support these determinations.

If your completed d-key output letter shows a "No Effect" (NE) determination for all listed species, print your IPaC output letter for your files to document your compliance with the Endangered Species Act.

For Federal projects with a “Not Likely to Adversely Affect” (NLAA) determination, our concurrence becomes valid if you do not hear otherwise from us after a 30-day review period, as indicated in your letter.

If your d-key output letter indicates additional coordination with the Minnesota-Wisconsin Ecological Services Field Office is necessary (i.e., you get a “May Affect” determination), you will be provided additional guidance on contacting the Service to continue ESA coordination outside of the key; ESA compliance cannot be concluded using the key for “May Affect” determinations unless otherwise indicated in your output letter.

Note: Once you obtain your official species list, you are not required to continue in IPaC with d-keys, although in most cases these tools should expedite your review. If you choose to make an effects determination on your own, you may do so. If the project is a Federal Action, you may want to review our section 7 step-by-step instructions before making your determinations.

Using the IPaC Official Species List to Make No Effect and May Affect Determinations for Listed Species

1. If IPaC returns a result of “There are no listed species found within the vicinity of the project,” then project proponents can conclude the proposed activities will have **no effect** on any federally listed species under Service jurisdiction. Concurrence from the Service is not required for **no effect** determinations. No further consultation or coordination is required. Attach this letter to the dated IPaC species list report for your records.
2. If IPaC returns one or more federally listed, proposed, or candidate species as potentially present in the action area of the proposed project – other than bats (see below) – then project proponents must determine if proposed activities will have **no effect** on or **may affect** those species. For assistance in determining if suitable habitat for listed, candidate, or proposed species occurs within your project area or if species may be affected by project activities, you can obtain Life History Information for Listed and Candidate Species on our office website. If no impacts will occur to a species on the IPaC species list (e.g., there is no habitat present in the project area), the appropriate determination is **no effect**. No further consultation or coordination is required. Attach this letter to the dated IPaC species list report for your records.

3. Should you determine that project activities **may affect** any federally listed, please contact our office for further coordination. Letters with requests for consultation or correspondence about your project should include the Consultation Tracking Number in the header. Electronic submission is preferred.

Northern Long-Eared Bats
Northern long-eared bats occur throughout Minnesota and Wisconsin and the information below may help in determining if your project may affect these species.

Suitable summer habitat for northern long-eared bats consists of a wide variety of forested/wooded habitats where they roost, forage, and travel and may also include some adjacent and interspersed non-forested habitats such as emergent wetlands and adjacent edges of agricultural fields, old fields and pastures. This includes forests and woodlots containing potential roosts (i.e., live trees and/or snags ≥3 inches dbh for northern long-eared bat that have exfoliating bark, cracks, crevices, and/or hollows), as well as linear features such as fencerows, riparian forests, and other wooded corridors. These wooded areas may be dense or loose aggregates of trees with variable amounts of canopy closure. Individual trees may be considered suitable habitat when they exhibit the characteristics of a potential roost tree and are located within 1,000 feet (305 meters) of forested/wooded habitat. Northern long-eared bats have also been observed roosting in human-made structures, such as buildings, barns, bridges, and bat houses; therefore, these structures should also be considered potential summer habitat and evaluated for use by bats. If your project will impact caves or mines or will involve clearing forest or woodland habitat containing suitable roosting habitat, northern long-eared bats could be affected. For bat activity dates, please review Appendix L in the Range-wide Indiana Bat and Northern Long-Eared Bat Survey Guidelines.

Examples of unsuitable habitat include:

- Individual trees that are greater than 1,000 feet from forested or wooded areas,
- Trees found in highly developed urban areas (e.g., street trees, downtown areas),
- A pure stand of less than 3-inch dbh trees that are not mixed with larger trees, and
- A monoculture stand of shrubby vegetation with no potential roost trees.

If IPaC returns a result that northern long-eared bats are potentially present in the action area of the proposed project, project proponents can conclude the proposed activities **may affect** this species **IF** one or more of the following activities are proposed:

- Clearing or disturbing suitable roosting habitat, as defined above, at any time of year,
- Any activity in or near the entrance to a cave or mine,
- Mining, deep excavation, or underground work within 0.25 miles of a cave or mine,
- Construction of one or more wind turbines, or
- Demolition or reconstruction of human-made structures that are known to be used by bats based on observations of roosting bats, bats emerging at dusk, or guano deposits or stains.

If none of the above activities are proposed, project proponents can conclude the proposed activities will have **no effect** on the northern long-eared bat. Concurrence from the Service is not required for **No Effect** determinations. No further consultation or coordination is required. Attach this letter to the dated IPaC

species list report for your records.

If any of the above activities are proposed, and the northern long-eared bat appears on the user's species list, the federal project user will be directed to either the northern long-eared bat and tricolored bat range-wide D-key or the Federal Highways Administration, Federal Railways Administration, and Federal Transit Administration Indiana bat/Northern long-eared bat D-key, depending on the type of project and federal agency involvement. Similar to the Minnesota-Wisconsin D-key, these d-keys helps to determine if prohibited take might occur and, if not, will generate an automated verification letter. Additional information about available tools can be found on the Service's northern long-eared bat website.

Whooping Crane
Whooping crane is designated as a non-essential experimental population in Wisconsin and consultation under Section 7(a)(2) of the Endangered Species Act is only required if project activities will occur within a National Wildlife Refuge or National Park. If project activities are proposed on lands outside of a National Wildlife Refuge or National Park, then you are not required to consult. For additional information on this designation and consultation requirements, please review "Establishment of a Nonessential Experimental Population of Whooping Cranes in the Eastern United States."

Other Trust Resources and Activities
Bald and Golden Eagles - Although the bald eagle has been removed from the endangered species list, this species and the golden eagle are protected by the Bald and Golden Eagle Act and the Migratory Bird Treaty Act. It is the responsibility of the project proponent to survey the area for any migratory bird nests. If there is an eagle nest on-site while work is on-going, eagles may be disturbed. We recommend avoiding and minimizing disturbance to eagles whenever practicable. If you cannot avoid eagle disturbance, you may seek a permit. A nest take permit is always required for removal, relocation, or obstruction of an eagle nest. For communication and wind energy projects, please refer to additional guidelines below.

Migratory Birds - The Migratory Bird Treaty Act (MBTA) prohibits the taking, killing, possession, transportation, and importation of migratory birds, their eggs, parts, and nests, except when specifically authorized by the Service. The Service has the responsibility under the MBTA to proactively prevent the mortality of migratory birds whenever possible and we encourage implementation of recommendations that minimize potential impacts to migratory birds. Such measures include clearing forested habitat outside the nesting season (generally March 1 to August 31) or conducting nest surveys prior to clearing to avoid injury to eggs or nestlings.

Communication Towers - Construction of new communications towers (including radio, television, cellular, and microwave) creates a potentially significant impact on migratory birds, especially some 350 species of night-migrating birds. However, the Service has developed voluntary guidelines for minimizing impacts.

Transmission Lines - Migratory birds, especially large species with long wingspans, heavy bodies, and poor maneuverability can also collide with power lines. In addition, mortality can occur when birds, particularly hawks, eagles, kites, falcons, and owls, attempt to perch on uninsulated or unguarded power poles. To minimize these risks, please refer to guidelines developed by the Avian Power Line Interaction Committee and the Service. Implementation of these measures is especially important along sections of lines adjacent to wetlands or other areas that support large numbers of raptors and migratory birds.

Wind Energy - To minimize impacts to migratory birds and bats, wind energy projects should follow the Service's Wind Energy Guidelines. In addition, please refer to the Service's Eagle Conservation Plan Guidance, which provides guidance for conserving bald and golden eagles in the course of siting, constructing, and operating wind energy facilities.

State Department of Natural Resources Coordination
While it is not required for your Federal section 7 consultation, please note that additional state endangered or threatened species may also have the potential to be impacted. **Please contact the Minnesota or Wisconsin Department of Natural Resources for information on state listed species that may be present in your proposed project area.**

- Wetlands

OFFICIAL SPECIES LIST

This list is provided pursuant to Section 7 of the Endangered Species Act, and fulfills the requirement for Federal agencies to "request of the Secretary of the Interior information whether any species which is listed or proposed to be listed may be present in the area of a proposed action".

This species list is provided by:

Minnesota-Wisconsin Ecological Services Field Office
3815 American Blvd East
Bloomington, MN 55425-1659
(952) 858-0793

PROJECT SUMMARY

Project Code: 2025-0109649
Project Name: ISA Project
Project Type: Transmission Line - New Constr - Above Ground
Project Description: Transmission Line
Project Location:

The approximate location of the project can be viewed in Google Maps: https://www.google.com/maps/@46.99828875,-92.91115075453897,14z

Counties: Itasca and St. Louis counties, Minnesota

ENDANGERED SPECIES ACT SPECIES

There is a total of 6 threatened, endangered, or candidate species on this species list.

Species on this list should be considered in an effects analysis for your project and could include species that exist in another geographic area. For example, certain fish may appear on the species list because a project could affect downstream species.

IPaC does not display listed species or critical habitats under the sole jurisdiction of NOAA Fisheries[1], as USFWS does not have the authority to speak on behalf of NOAA and the Department of Commerce.

See the "Critical habitats" section below for those critical habitats that lie wholly or partially within your project area under this office's jurisdiction. Please contact the designated FWS office if you have questions.

---

1. NOAA Fisheries, also known as the National Marine Fisheries Service (NMFS), is an office of the National Oceanic and Atmospheric Administration within the Department of Commerce.

MAMMALS

NAME	STATUS
Canada Lynx *Lynx canadensis* Population: Wherever Found in Contiguous U.S. There is **final** critical habitat for this species. Your location does not overlap the critical habitat. Species profile: https://ecos.fws.gov/ecp/species/3652	Threatened
Gray Wolf *Canis lupus* Population: MN There is **final** critical habitat for this species. Your location does not overlap the critical habitat. Species profile: https://ecos.fws.gov/ecp/species/4488	Threatened
Northern Long-eared Bat *Myotis septentrionalis* No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/9045	Endangered
Tricolored Bat *Perimyotis subflavus* No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/10515	Proposed Endangered

INSECTS

NAME	STATUS
Monarch Butterfly *Danaus plexippus* There is **proposed** critical habitat for this species. Your location does not overlap the critical habitat. Species profile: https://ecos.fws.gov/ecp/species/9743	Proposed Threatened
Suckley's Cuckoo Bumble Bee *Bombus suckleyi* Population: No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/10885	Proposed Endangered

CRITICAL HABITATS

THERE ARE NO CRITICAL HABITATS WITHIN YOUR PROJECT AREA UNDER THIS OFFICE'S JURISDICTION.

YOU ARE STILL REQUIRED TO DETERMINE IF YOUR PROJECT(S) MAY HAVE EFFECTS ON ALL ABOVE LISTED SPECIES.

USFWS NATIONAL WILDLIFE REFUGE LANDS AND FISH HATCHERIES

Any activity proposed on lands managed by the National Wildlife Refuge system must undergo a 'Compatibility Determination' conducted by the Refuge. Please contact the individual Refuges to discuss any questions or concerns.

THERE ARE NO REFUGE LANDS OR FISH HATCHERIES WITHIN YOUR PROJECT AREA.

BALD & GOLDEN EAGLES

Bald and Golden Eagles are protected under the Bald and Golden Eagle Protection Act [2] and the Migratory Bird Treaty Act (MBTA) [1]. Any person or organization who plans or conducts activities that may result in impacts to Bald or Golden Eagles, or their habitats, should follow appropriate regulations and consider implementing appropriate avoidance and minimization measures, as described in the various links on this page.

---

1. The Bald and Golden Eagle Protection Act of 1940.
2. The Migratory Birds Treaty Act of 1918.
3. 50 C.F.R. Sec. 10.12 and 16 U.S.C. Sec. 668(a)

There are Bald Eagles and/or Golden Eagles in your project area.

Measures for Proactively Minimizing Eagle Impacts
For information on how to best avoid and minimize disturbance to nesting bald eagles, please review the National Bald Eagle Management Guidelines. You may employ the timing and activity-specific distance recommendations in this document when designing your project/ activity to avoid and minimize eagle impacts. For bald eagle information specific to Alaska, please refer to Bald Eagle Nesting and Sensitivity to Human Activity.

The FWS does not currently have guidelines for avoiding and minimizing disturbance to nesting Golden Eagles. For site-specific recommendations regarding nesting Golden Eagles, please consult with the appropriate Regional Migratory Bird Office or Ecological Services Field Office.

If disturbance or take of eagles cannot be avoided, an incidental take permit may be available to authorize any take that results from, but is not the purpose of, an otherwise lawful activity. For assistance making this determination for Bald Eagles, visit the Do I Need A Permit Tool. For assistance making this determination for golden eagles, please consult with the appropriate Regional Migratory Bird Office or Ecological Services Field Office.

Ensure Your Eagle List is Accurate and Complete
If your project area is in a poorly surveyed area in IPaC, your list may not be complete and you may need to rely on other resources to determine what species may be present (e.g. your local FWS field office, state surveys, your own surveys). Please review the Supplemental Information on Migratory Birds and Eagles, to help you properly interpret the report for your specified location, including determining if there is sufficient data to ensure your list is accurate.

For guidance on when to schedule activities or implement avoidance and minimization measures to reduce impacts to bald or golden eagles on your list, see the "Probability of Presence Summary" below to see when these bald or golden eagles are most likely to be present and breeding in your project area.

NAME	BREEDING SEASON
Bald Eagle *Haliaeetus leucocephalus* This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities. https://ecos.fws.gov/ecp/species/1626	Breeds Dec 1 to Aug 31
Golden Eagle *Aquila chrysaetos* This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities. https://ecos.fws.gov/ecp/species/1680	Breeds Jan 1 to Aug 31

PROBABILITY OF PRESENCE SUMMARY

The graphs below provide our best understanding of when birds of concern are most likely to be present in your project area. This information can be used to tailor and schedule your project activities to avoid or minimize impacts to birds. Please make sure you read "Supplemental Information on Migratory Birds and Eagles", specifically the FAQ section titled "Proper Interpretation and Use of Your Migratory Bird Report" before using or attempting to interpret this report.

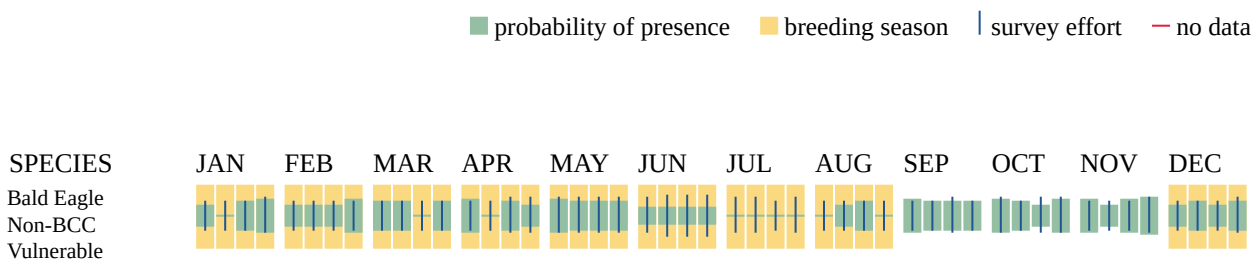
Probability of Presence (■)

Green bars; the bird's relative probability of presence in the 10km grid cell(s) your project overlaps during that week of the year.

Breeding Season (■)
Yellow bars; liberal estimate of the timeframe inside which the bird breeds across its entire range.

Survey Effort (|)
Vertical black lines; the number of surveys performed for that species in the 10km grid cell(s) your project area overlaps.

No Data (–)
A week is marked as having no data if there were no survey events for that week.



Golden Eagle
Non-BCC
Vulnerable

- Supplemental Information for Migratory Birds and Eagles in IPaC https://www.fws.gov/media/supplemental-information-migratory-birds-and-bald-and-golden-eagles-may-occur-project-action

MIGRATORY BIRDS

The Migratory Bird Treaty Act (MBTA) [1] prohibits the take (including killing, capturing, selling, trading, and transport) of protected migratory bird species without prior authorization by the Department of Interior U.S. Fish and Wildlife Service (Service).

1. The Migratory Birds Treaty Act of 1918.
2. The Bald and Golden Eagle Protection Act of 1940.
3. 50 C.F.R. Sec. 10.12 and 16 U.S.C. Sec. 668(a)

For guidance on when to schedule activities or implement avoidance and minimization measures to reduce impacts to migratory birds on your list, see the "Probability of Presence Summary" below to see when these birds are most likely to be present and breeding in your project area.

NAME	BREEDING SEASON
Bald Eagle *Haliaeetus leucocephalus* This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities. https://ecos.fws.gov/ecp/species/1626	Breeds Dec 1 to Aug 31
Black-billed Cuckoo *Coccyzus erythropthalmus* This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/9399	Breeds May 15 to Oct 10

NAME	BREEDING SEASON
Bobolink *Dolichonyx oryzivorus* This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/9454	Breeds May 20 to Jul 31
Canada Warbler *Cardellina canadensis* This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/9643	Breeds May 20 to Aug 10
Chimney Swift *Chaetura pelagica* This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/9406	Breeds Mar 15 to Aug 25
Connecticut Warbler *Oporornis agilis* This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/9442	Breeds Jun 15 to Aug 10
Eastern Whip-poor-will *Antrostomus vociferus* This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/10678	Breeds May 1 to Aug 20
Evening Grosbeak *Coccothraustes vespertinus* This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/9465	Breeds May 15 to Aug 10
Golden Eagle *Aquila chrysaetos* This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities. https://ecos.fws.gov/ecp/species/1680	Breeds Jan 1 to Aug 31
Golden-winged Warbler *Vermivora chrysoptera* This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/8745	Breeds May 1 to Jul 20
Le Conte's Sparrow *Ammospiza leconteii* This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/9469	Breeds Jun 1 to Aug 15
Lesser Yellowlegs *Tringa flavipes* This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/9679	Breeds elsewhere

NAME	BREEDING SEASON
Olive-sided Flycatcher *Contopus cooperi* This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/3914	Breeds May 20 to Aug 31
Ruddy Turnstone *Arenaria interpres morinella* This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA https://ecos.fws.gov/ecp/species/10633	Breeds elsewhere
Veery *Catharus fuscescens fuscescens* This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA https://ecos.fws.gov/ecp/species/11987	Breeds May 15 to Jul 15
Wood Thrush *Hylocichla mustelina* This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/9431	Breeds May 10 to Aug 31

WETLANDS

Impacts to NWI wetlands and other aquatic habitats may be subject to regulation under Section 404 of the Clean Water Act, or other State/Federal statutes.

For more information please contact the Regulatory Program of the local U.S. Army Corps of Engineers District.

Please note that the NWI data being shown may be out of date. We are currently working to update our NWI data set. We recommend you verify these results with a site visit to determine the actual extent of wetlands on site.

[a] Equipment counts based on experience with construction of a similar project.

[b] Generally assumes work will occur 7 am - 7 pm, Monday through Saturday, for a total of 72 work hours per week over 16 weeks

[c] Load Factors from Appendix A of EPA 420_P 04 005, Median Life, Annual Activity, and Load Factor Values for Nonroad Engine Emissions Modeling , USEPA, April 2004.

[d] EPA 420 P 04 009, Exhaust and Crankcase Emission Factors for Nonroad Engine Modeling Compression Ignition, USEPA, April 2004 Tier 2 Engines.

[e] GHG emission factors from Title 40 Subchapter C Part 98 Subpart C Table C-1 and C-2 to Subpart C.

Assumption:

393.5 hp-hr/MMBtu
453.6 g/lb

Iron Range - St. Louis County - Arrowhead 345 kV Transmission Line Project

Construction Emission Calculations

Greenhouse Gas Emissions from On Road Construction Traffic

On-Road Vehicles					
	Vehicles per day	**Miles per vehicle**	**Number of Days**	**Fuel Used (gallons)**	**CO_2 Emissions [a] (tons)**
Commuter Vehicles - Gasoline [b,c]	20	60	120	6,000	58.78
Delivery Trucks - Diesel [d]	1	60	120	1,108	12.43
Concrete Mixer Trucks - Diesel [e]	2	60	120	4,235	47.54
TOTAL					**118.75**

[a] Assumes 1 gallon of gasoline = 8,887 grams CO_2 and 1 gallon of diesel = 10,180 g CO_2, per US EPA's "Greenhouse Gas Emissions from a Typical Passenger Vehicle," available online at: https://nepis.epa.gov/Exe/ZyPDF.cgi?Dockey=P100U8YT.pdf

[b] Assumes commuters travel 30 miles each way (60 miles round trip) per day, with a fuel economy of 24 miles per gallon, per US EPA and US Department of Energy Fuel Economy data for combined city and highway driving in 2023, available online at: https://www.fueleconomy.gov/feg/download.shtml.

[c] Assumes commuters will travel for 5 months, 6 days a week.

[d] Assumes delivery trucks travel 30 miles each way (60 miles round trip) per day, with a fuel economy of 6.5 miles per gallon, industry average.

[e] Assumes concrete mixer trucks travel 30 miles each way (60 miles round trip) per day, with a fuel economy of 3.4 miles per gallon, industry average.
http://ascpro0.ascweb.org/archives/cd/2012/paper/CPRT221002012.pdf#:~:text=The%20National%20Ready%20Mix%20Concrete%20Association%20%28NRMCA%29%20in,average%203.4%20miles%20per%20gallon%20of%20diesel%20fuel.

1 short ton =	907,185	grams
1 gal gasoline =	8,887	g CO2
1 gal diesel =	10,182	g CO2

Commuter Vehicle MPG=	24
Delivery Trucks (Diesel) MPG=	6.5
Concrete Mixer Truck MPG=	3.4
