To Craig Janezich:

Re: Parcel BC-CU-1630 Property ID. 76310516.

We are sure you have a copy of the current map dated 11-18-24, showing the power line going from the NE Corner of our property, then across the N. line to our West property line.. If this goes thru, it will eliminate a great many of our trees. Also eliminating all chances of any building sites along the North portion of our property, since that is the highest area of the whole property, also the best view. We discussed with Trey Bowman of GRE, having the line go South at an angle from the NE corner to the SW corner. This is all low land and would not impact the property value nearly as much. However the latest map shows them using the original plan. We would appreciate all you can do to see that our plan would be the best for everybody.

After you and I talked, and before I was able to get to this note, we received a call again from Trey Bowman of GRE. He said they had a meeting and discussed our property and indicated they maybe would be able to angle the line as we wanted. I told him about writing you about the issue, He wanted us to wait, but we decided the more help we can get the better our chances are to have it done the way we would like.

Thank you for your time and help.

Sincerely, Jay & Terry Orton 218-839-4091 1015 Beech Street, Brainerd.
