Information Request No.

1

Docket No.: ET-6675/TL-24-232

Response To: Minnesota Public Utilities Commission

Requestor: Jacques Harvieux, Commission Staff

Date Received: November 6, 2025

Question:

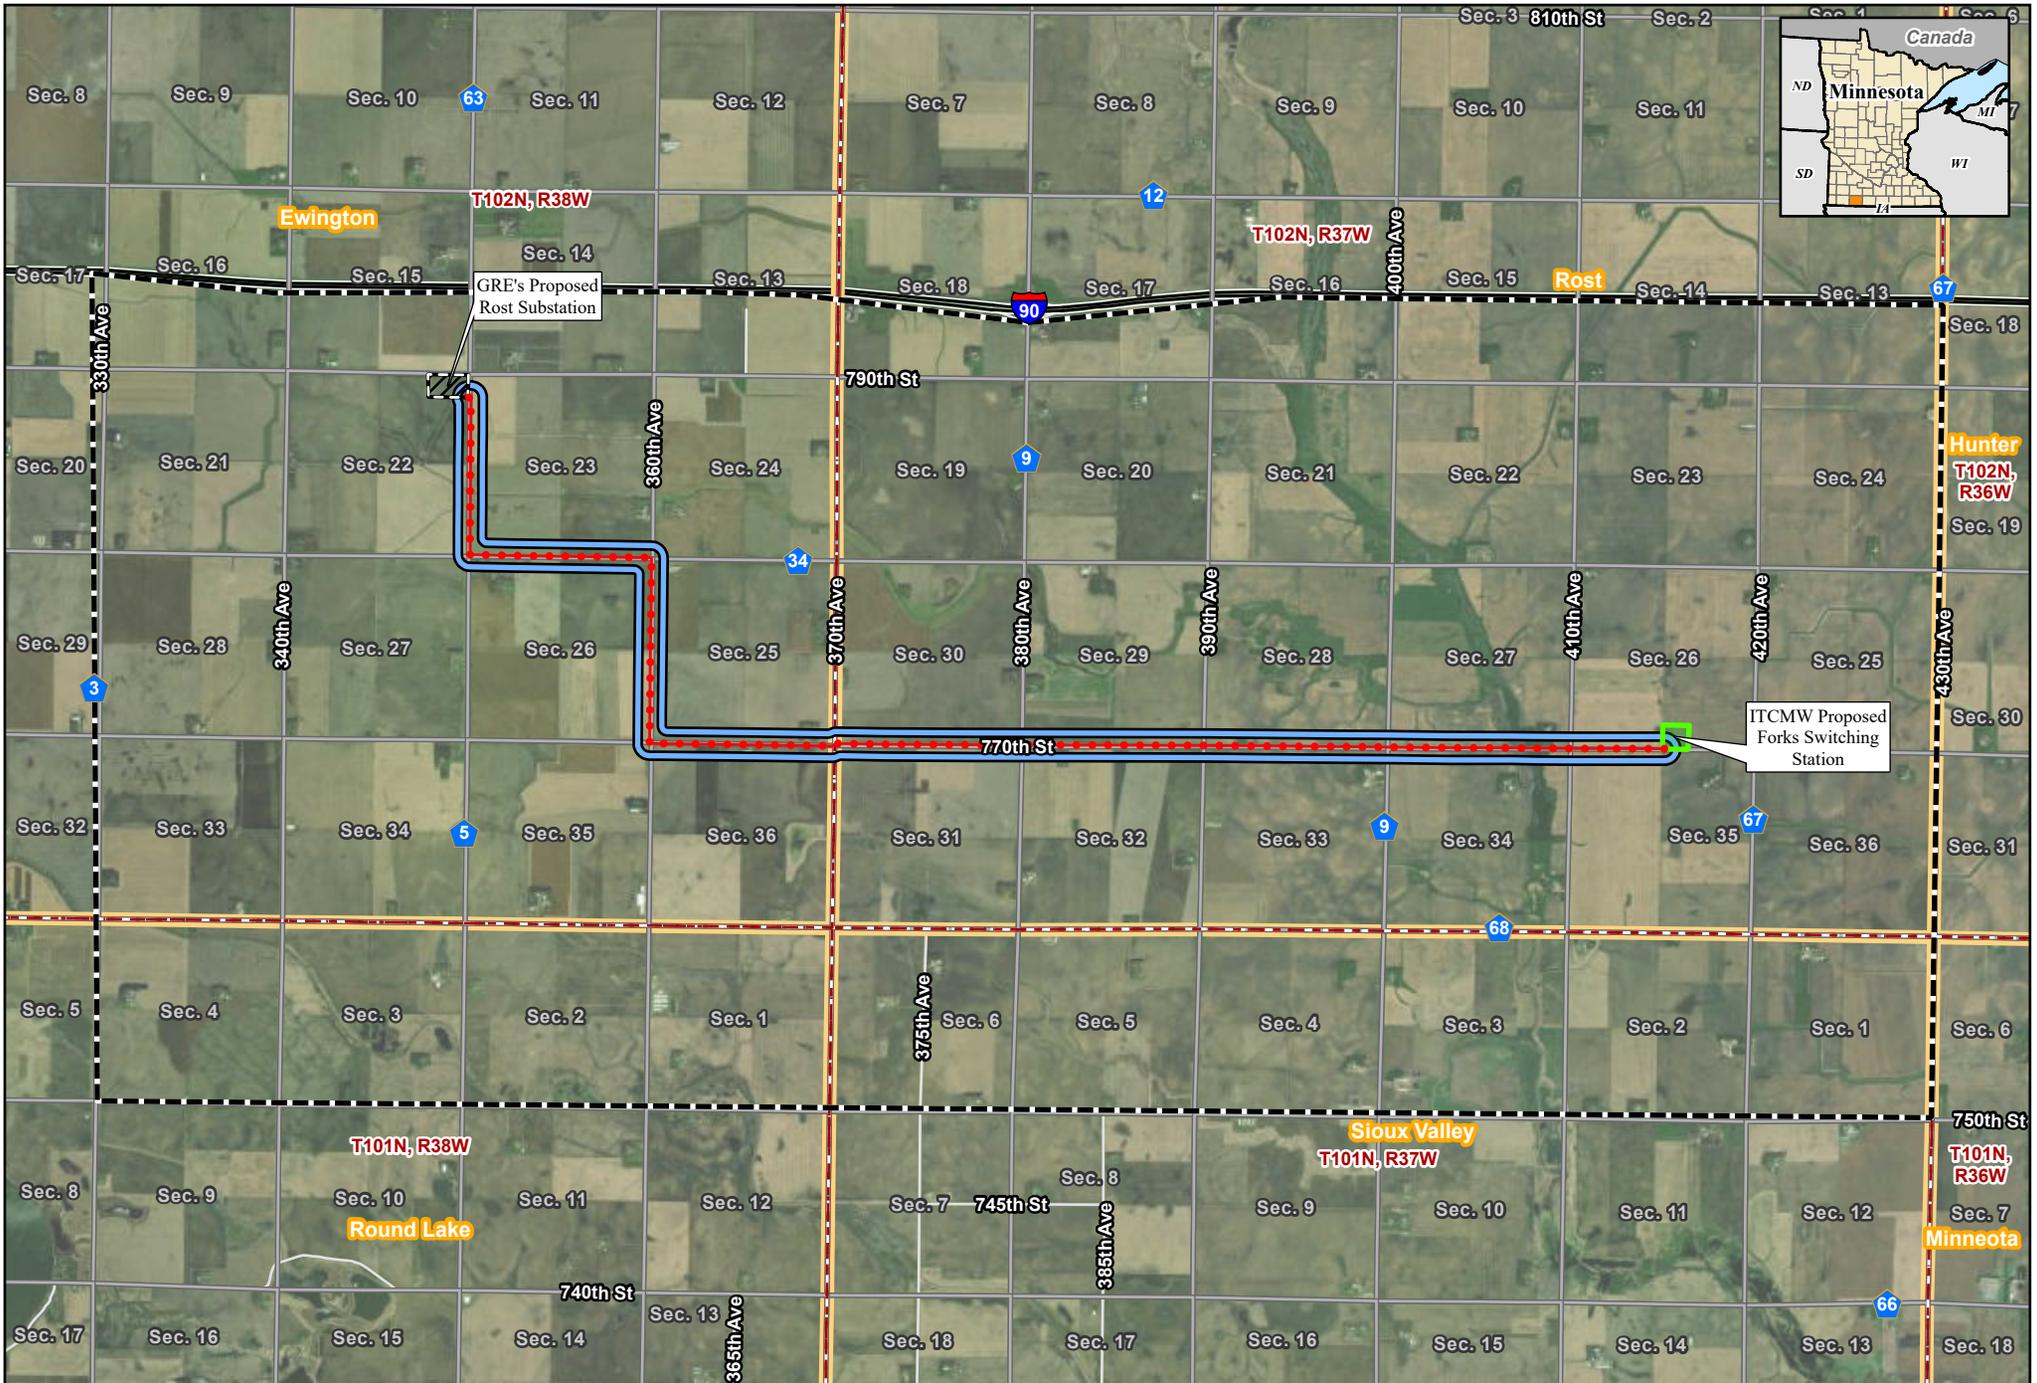

- 1.1 Please provide more information on the proposed 1,500-foot route width, specifically why the width is needed for the entirety of the proposed route?
- 1.2 What are the specific constraints along the proposed route, in detail, that are cause for justification of the 1,500-foot route width?
- 1.3 Where are the specific constraints along the proposed route, in detail, that are cause for justification of the 1,500-foot width?
- 1.4 Can the use of a 1,500-foot route width be limited to those specific areas along the proposed route? If not, why?
- 1.5 Please provide an updated map highlighting those areas where the 1,500-foot route width is needed along the proposed route.

Response:

ITC Midwest LLC (ITC Midwest) proposed a 1,500 foot wide route width in its Route Permit Application (Application) for the Forks – Rost 161 kV Transmission Project (Project) because at the time of the filing of the Application, ITC Midwest was still working on the design and final alignment for the Project. ITC Midwest needed the wider route width to provide flexibility to address residences and other constraints located along roadways that parallel the proposed route.

Since the filing of the Application, ITC Midwest has continued to work to finalize the design for the Project. Given this further design development, ITC Midwest can now narrow its route width request to 1,000 feet (500 feet on each side of the proposed centerline) for the Project. Attached to this response are maps showing this 1,000 foot route width for the Project.
