INITIAL COMMENTS

Dear Ms. Bergman:

CenterPoint Energy Resources Corp d/b/a CenterPoint Energy Minnesota Gas ("CenterPoint Energy" or the "Company") respectfully submits the following Initial Comments in response to the Minnesota Public Utilities Commission's ("Commission") Notice of Comment Period ("Notice") issued Augst 25, 2025. In its Notice, the Commission requests comment on the appropriate data source and values for the regulatory cost of greenhouse gas emissions for Xcel Energy, CenterPoint Energy, and Minnesota Energy Resources Corporation's upcoming gas integrated resource plans.

If you have questions, please contact me at Trey.Harsch@centerpointenergy.com or 612-321-5191.

Sincerely,

/s/ Trey Harsch

Docket No. G999/CI-07-1199

INITIAL COMMENTS

I. INTRODUCTION

CenterPoint Energy Resources Corp d/b/a CenterPoint Energy Minnesota Gas (“CenterPoint Energy” or the “Company”) respectfully submits the following comments in response to the Minnesota Public Utilities Commission’s (“Commission”) Notice of Comment Period (“Notice”) issued August 25, 2025.

The Commission is required by Minn. Stat. § 216H.06 to establish a regulatory cost of carbon for use in all electricity generation resource acquisition proceedings, including electric integrated resource plans (IRPs). Per statute, the regulatory cost of carbon represents the “likely range of costs of future carbon dioxide regulation on electricity generation.”¹ Through this statutory language, the legislature acknowledges the potential for future carbon regulation affecting electric utilities. Accordingly, the regulatory cost of carbon represents an estimate of the financial impact such regulation would impose on utilities, and by extension, on ratepayers. Functionally, the regulatory cost of carbon is applied within a capacity expansion model to carbon-emitting electricity generating facilities whenever they are called upon to operate – analogous to how fuel costs are modeled.

¹ Minn. Stat. § 216H.06

The most recent range of regulatory cost of carbon values were adopted by the Commission through its December 19, 2023, Order in Docket Nos. E-999/CI/07-1199, E-999/DI-22-236, and E-999/CI-14-643. Through this Order, the Commission, among other things:

- Updated the regulatory cost of carbon range to \$5-\$75 per short ton;
- Established 2028 as the new effective date for these costs;
- Clarified that environmental externality² costs should be considered in each year of a scenario to the extent that such costs exceed the regulatory costs for the same year.

Through Docket No. G-008, G-002, G-011/CI-23-117, The Commission underwent a process to establish guidelines for gas utility IRPs. This process was initiated by the Commission in the wake of Winter Storm Uri with the understanding that long-term planning could help gas utilities adapt to increasingly more frequent extreme weather events and industry innovations.³ The Commission's March 27, 2024 Order provided initial guidance on gas utility IRPs, specifying, among other things:

- Utilities should address risk and uncertainty of demand, availability, and price for all resource options included in resource plans, and costs to comply with any regulation of greenhouse gas emissions.⁴
- Natural gas resource plans shall include the cost of each scenario and sensitivity presenting both the utility's revenue requirement and environmental costs and other externalities to the utility's revenue requirement.⁵

Through a later order in the same Docket, the Commission expanded on its initial guidance, specifying that CenterPoint Energy, Minnesota Energy Resources Corporation, and Xcel Energy must use the most recent environmental externality values adopted by the Commission in Docket No. E-999/CI-14-643 to evaluate the environmental externality costs of resource options in gas IRPs,⁶ and initiating this proceeding to consider and determine the appropriate data sources and values for the regulatory cost of greenhouse gas emissions for natural gas resource plans.⁷

² Externality costs – which are intended to estimate the uninternalized societal costs of fossil fuel use – were historically determined by the Commission, but are now based on the EPA's *Report on the Social Cost of Greenhouse Gases: Estimates incorporating Recent Scientific Advances* consistent with Minn. Stat. § 216B.2422, subd. 3.

³ February 17, 2023 *Order Requiring Actions to Mitigate Impacts from Future Natural Gas Price Spikes, Setting Filing Requirements, and Initiating a Proceeding to Establish Gas Resource Planning Requirements*, Docket Nos. G-999/CI-21-135, G-008/M-21-138, G-004/M-21-235, G-002/CI-21-610, and G-011/CI-21-611.

⁴ March 27, 2024 *Order Establishing Framework for Natural Gas Utility Integrated Resource Planning*, Docket Nos. G-008, G-002, G-011/CI-23-117 and G-999/CI-21-565, Order Paragraph 15

⁵ *Id.*, Order Paragraph 49.

⁶ October 28, 2024 *Order Clarifying and Expanding Framework for Natural Gas Integrated Resource Planning*, Docket Nos. G-008, G-002, G-011/CI-23-117 and G-999/CI-21-565, Order Paragraph 15.

⁷ *Id.*, Order Paragraph 16.

II. COMMENTS

a. **Minn. Stat. § 216H.06 and last approved in Docket No. E999/CI-07-1199 in the Commission's December 19, 2023 Order appropriate for use in Xcel Energy, CenterPoint Energy, and Minnesota Energy Resource Corporation's upcoming IRPs?**

CenterPoint Energy recommends that the Commission consider alternative values for the regulatory cost from what was approved in the Commission's December 19, 2023 Order. Specifically, CenterPoint Energy recommends establishing a lower regulatory cost of carbon value of \$0 and an effective date of 2030. These recommendations are discussed individually in the sections below.

With its initial comments, CenterPoint Energy does not take a position on the upper bound of the regulatory cost range. The Company understands the regulatory cost of carbon serves as a tool intended to ensure that electric utilities contemplate future regulatory costs in their long-term plans and take steps to address the risks associated with such regulation. However, the regulatory cost of carbon itself is not intended to serve as a form of regulation. Ultimately, CenterPoint Energy is concerned that leveraging the regulatory cost carbon as a decarbonization tool instead of as an input intended to improve the accuracy of utility models will result in the establishment of regulatory cost values that far exceed actual anticipated near-term regulatory costs and will unintentionally impact the deployment of various innovative technologies currently being piloted through our Natural Gas Innovation Act (NGIA) Innovation Plan.

The carbon regulation contemplated by the regulatory cost of carbon involves a direct cost to utilities for every short ton of CO₂ emitted, similar to how a carbon tax might function. Several of the innovative technologies CenterPoint Energy is pursuing through the NGIA, including renewable natural gas (RNG) and gas heat pumps, do not eliminate end-use emissions and thus could subject CenterPoint Energy to these hypothetical regulatory costs if they were more widely deployed. Although RNG may be carbon neutral or carbon negative when taking lifecycle emissions into consideration, there is no guarantee that lifecycle emissions would be considered in future carbon regulation. CenterPoint Energy notes that the Commission is grappling with this exact issue through its Carbon Free Standard (CFS) implementation process for Minnesota's electric utilities.⁸

Although thermal energy networks (TENs) are an exciting new technology being piloted through the Company's NGIA Innovation Plan, CenterPoint Energy may currently be limited in its ability to plan for their deployment through IRPs in response to high regulatory cost scenarios. Today, Minnesota's regulated natural gas utilities are limited in their ability to propose and deploy TENs outside of NGIA Innovation Plans. Even if there was sufficient legislative certainty for the Company to confidently offer TENs as a service as a part of long-term plans, the Company would be hesitant to do so until we've been able to successfully pilot the technology and report our findings. A high regulatory cost of carbon right now may simply promote halting gas system expansion, because the ability to deploy other scalable solutions in response to high regulatory costs are limited during the current pilot phase of NGIA.

⁸ Docket No. E-999/CI-24-352 and 23-151 CFS implementation docket

Ultimately, CenterPoint Energy's concern is that by establishing an upper regulatory cost of carbon value that is based on ambitious climate change policy instead of the costs most likely to be faced by utilities within the next five to ten years, the Commission may unintentionally limit the Company's ability to plan for and deploy the various innovative resources currently being piloted under the NGIA. Such a result would contradict the legislature's interest in a broad range of innovative technologies. CenterPoint Energy's position is that the Commission should only consider upper regulatory values that represent the most likely actual maximum range of regulatory costs gas utilities may experience in the next several years. The Company intends to take time between initial and reply comment periods to engage other parties about these concerns to identify a path forward that that would resolve the Company's reservations regarding this value.

CenterPoint Energy recognizes that the Commission did not request comment on the range of modeling scenarios described in Order Paragraphs 2 and 3 of its December 19, 2023 Order and thus has not provided any comments or recommendations regarding this issue in its initial comments.

b. If the current values established in the instant docket are not appropriate, what data source and update timeframe should be used for the regulatory cost of GHG emissions values for natural gas IRPs?

As noted previously, CenterPoint Energy recommends a lower regulatory cost value of \$0 and an implementation year of 2030. These independent recommendations are elaborated upon below.

i. Minimum Regulatory Cost of \$0

Regardless of what actions the Commission takes with the maximum regulatory cost and the effective date, CenterPoint Energy recommends that the Commission set the lower regulatory cost value at \$0.

A \$0 lower regulatory cost value represents a future in which no carbon regulations are put in place, or at least none that result in a direct cost to utilities and their customers through policies such as a carbon tax. This scenario would occur for a number of reasons. For example, it may be that no additional carbon legislation is enacted at the state or federal level, either because of changes in state and federal policy or because existing legislation is successful in reducing greenhouse gas emissions. It may also be that near term climate action at the state and federal level consists of incentives (carrots), instead of penalties (sticks). This is consistent with what we've seen thus far at the state level with legislation like the NGIA.

Recent changes at the federal level also make a \$0 lower bound more likely than in years past. When the Commission previously set its regulatory cost values, it did so while under the Biden administration, which had various climate action goals, including an objective to achieve carbon-free power sector by 2035 which was referenced by commentors the last time the Commission took up this issue for electric utilities. Since then, the Trump administration has taken office and it has not expressed the same interest in climate policy, having taken down the previous administration's call for a carbon-free power sector by 2035. The current stance on climate policy at the federal level likely limits the potential for future carbon regulation and the Company

recommends the Commission takes this into consideration when establishing the lower bound of regulatory costs.

CenterPoint Energy would also note that the Commission previously established its regulatory cost values without considering their impact on natural gas utilities. Unlike the electric sector, which may respond to new carbon legislation by leveraging one of several well-established carbon-free technologies, gas distribution utilities are in the early stages exploring the emission-reducing technologies available to them. This reality is supported by the NGIA legislation, which only recently allowed gas utilities to begin exploring emission-reducing technologies, and did not include regulation akin to the state's carbon-free standard for electric utilities. This further influences the likelihood of seeing near-term carbon legislation such those contemplated by the regulatory cost of carbon.

Through its December 19, 2023, Order, the Commission noted that utilities may always voluntarily develop and test scenarios in which there is a \$0 regulatory cost. While this is true, it avoids the fact that the lower bound influences the mid-point of the regulatory cost range, which is used by electric utilities as the regulatory cost value for their reference case scenarios. However, the use of electric utility regulatory cost modeling scenarios in gas IRPs has yet to be confirmed by the Commission through an Order, furthering the uncertainty surrounding the impact of regulatory costs on gas utility IRP models.

By placing the onus on utilities to test the possibility of a \$0 regulatory cost future instead of recognizing this possibility through the lower bound of the regulatory cost range, Commission would be inflating the mid-point regulatory cost value used in utilities' reference case scenario. The Commission would also be claiming that there is no future in which legislation such as a carbon tax does not exist. CenterPoint Energy would argue that a \$0 lower regulatory cost bound does not avoid recognition of the financial risk of carbon-emissions as both the reference case and high regulatory cost scenarios would model non-zero values for the regulatory cost of carbon.

ii. Effective Date of 2030

CenterPoint Energy recommends setting an effective date of 2030 for the regulatory cost of carbon, independently of other regulatory cost considerations.

A 2030 effective date considers both the federal election cycle – with the next federal election slated for 2028 – and the International Monetary Fund's (IMF) 2022 research paper,⁹ which served as the basis for the \$75 upper regulatory cost of carbon value adopted by the Commission in 2023. The 2022 IMF research paper noted that a carbon floor price of \$75 per metric ton of CO₂ by 2030 for high income nations would be sufficient to keep global warming below 2.0 degrees Celsius. By moving the effective date for the regulatory cost of carbon from 2028 to 2030, the Commission could address the political position of the current federal

⁹ Jean Chateau, Florence Jaumotte, and Gregor Schwerhoff, *Economic and Environmental Benefits from International Cooperation on Climate Policies*, International Monetary Fund Department Paper (March 17, 2022), available at <https://www.imf.org/en/Publications/Departmental-Papers-Policy-Papers/Issues/2022/03/16/Economic-and-Environmental-Benefits-from-International-Cooperation-on-Climate-Policies-511562>.

administration while not extending the effective date beyond what was recommended in the IMF research paper which served as the basis for the current \$75 maximum regulatory cost value.

III. List of Recommendations

In summary, CenterPoint recommends the following:

1. A lower regulatory cost of carbon value of \$0.
2. Setting the effective date for regulatory costs at 2030.

IV. CONCLUSION

The Company thanks the Commission for consideration of these Initial Comments. CenterPoint Energy will provide a complete list of final recommendations with its reply comments.

CERTIFICATE OF SERVICE

I, Christina Benning, certify that on Friday, October 31, 2025, I served the attached Initial Comment Filing of CenterPoint Energy in Docket Nos. G008,G002,G011/CI-23-117, G999/CI-21-565, and G999/CI-07-1199 to all persons at the addresses indicated on the attached service list by having the document delivered via electronic filing.
