Oral Public Meeting Comments Received on the Scope of the Environmental Assessment for the Benton Solar Project

Docket Nos. GS-23-423, ESS-24-283, and TL-23-425

Public Meetings

- 1. January 14, 2025 Sauk Rapids, Minnesota, 6:00 p.m.
 - Seven speakers.
- 2. January 15, 2025 Virtual, On-Line Meeting, 6:00 p.m.
 - One speaker, one attendee asking questions in the chat.

24	WHEREUPON, the following proceeding	gs
25	were duly had and entered of record, to wit:	

1 PROCEEDINGS 2 MR. CEZAR PANAIT: Good evening, 3 everyone. My name is Cezar Panait. engineer with the Minnesota Public Utilities 4 Commission in St. Paul, Minnesota, and we want to 5 welcome you to tonight's Public Utilities 6 Commission's public information and environmental 7 8 assessment scoping meeting. 9 And that is on Benton Solar project application for actually three permits. 10 So Benton Solar is proposing to build a 100-megawatt solar 11 energy system in Benton County not far from here, 12 about four miles east. There will be a storage 13 facility; that is, battery energy storage in 14 15 containers, and then we will talk about the project specifications more. And the size of that battery 16 17 energy storage is also 100 megawatts. 18 And there is a short transmission 19 line associated with both of these projects, .5 20 miles in length, 115-kilovolts to interconnect both 21 projects to the grid, and that will be through the 22 existing substation owned by Great River Energy, 23 the local co-operative company. MS. TAMARA SELL: Where will those 24

25

lines be?

MR. CEZAR PANAIT: The lines will be -- We have maps, and we also, in the docket, there is an application for a high-voltage transmission line, and there are detailed maps showing the alignment and the proposed route of that transmission line.

So tonight's meeting agenda, the items before the Public Utilities Commission, so I'm going to talk about the -- the -- the process, the permitting process that will be typical for an energy infrastructure project like this one goes through, and then I'll pass it over to NextEra or Benton Solar Energy, they're a -- they're a subsidiary, to talk about the project specifics.

And then I'll hand it over to my colleague to the right, Logan Hicks from the Department of Commerce, and he is going to talk about the Commerce's role in reviewing this -- this project, this application for -- for actually three permits.

So there are -- there are three permits that are involved in this review process, and the review of the application happens before -- before the Commission acts on the application to -- for a permit; that is, a site permit or a route

permit. It's a process, a review process that lasts up to one year, and the agencies involved with that review process by the legislature are the Public Utilities Commission, which is the state required commission or state government or state agency comprised about -- from about 70 full-time staffers and six appointed commissioners. And the commissioners serve six years staggered terms and they are appointed by the governor and confirmed by the -- by the Minnesota Senate.

And one of the roles of the Commission is to review and issue permits for building large energy projects such as the large solar or all of them and high-voltage transmission lines.

And then the other department is the Department of Commerce, and they will speak about their roles and responsibilities.

And then later on, we already have a judge assigned to this case from the Office of Administrative Hearings, and the judge is not here tonight, but she will be presiding over the -- the public hearings later on in -- in August.

Because this is a contested case, meaning we have some parties, namely labor, who are

1	intervening in the docket, meaning they want to
2	fully develop their reasoning, their arguments, and
3	there will be a series of hearings - one scoping
4	meeting, one evidentiary hearing so later on for
5	the for the judge, and the judge will will
6	provide a findings of fact and conclusions and
7	submit that to the Commission as an advisory.
8	The Commission has the ultimate
9	decision to issue or deny a permit, but before that
10	the information the judge will be compiling will be
11	advisory to the Commission. And she will be making
12	findings and recommendations as to the permits and
13	as to as to what conditions should go into those
14	permits.
15	Before I go any further, I I want
16	to mention Yes.
17	MR. MICHAEL ODENTHAL: May she ask a
18	question?
19	MR. CEZAR PANAIT: Yes.
20	MS. TAMARA SELL: You said this is
21	being contested. Is it I don't know what the
22	conditions of that are. Are these homeowners
23	COURT REPORTER: Excuse me. They're
24	going to have to come up to the podium and talk.
25	MR. CEZAR PANAIT: Can we can we

wait on those questions, please, because we have plenty of time. We want to speed up through the -through the presentation part and we want to get to everyone's questions right after that. We expect it not to take more than 30 minutes for the presentation.

So I'm going to -- On the -- on the table next to the -- the wall near the window, we have some handouts. Please go ahead and -- and help yourself. We have copies of the PowerPoint. We've got copies of the notice for tonight's meeting that you all must have received in the mail. We've got some blank comment forms. We've got some fact sheets about transmission lines.

And also we have this little comment card for people who are interested in having their names placed on the project contact list. So you will be -- you fill this out and we'll -- we'll enter this into a service list, and every time there is a new document being submitted into the record, you will receive an e-mail notification so you become aware of a new filing having been submitted.

So with that, so the project -- I'm not sure I already spoke about this one, and next

we'll go into more details about the 100-megawatt solar generating system and the 100-megawatt battery energy storage system.

The project will be roughly 632 acres of private land out of a larger parcel of land.

And so the -- the land is -- is privately owned, and NextEra will be securing easements for that land. So they will talk about that. So there's no eminent domain process involved here, so it's solely voluntary participation.

The project also will include a substation, a project substation as opposed to the existing GRE transmission substation. So all the power will be funneled through underground cables to that project substation for collecting the rows of panels and from the battery energy storage. And from there it will be taken over to GRE's overhead 115 -- to a short 115-kilovolt transmission line that will be developed by the project -- as part of the project.

So I mentioned briefly about the -the permits. One of the roles that the Commission
has, so the Commission regulates the three tiers
of -- of the service industry. One is the
electricity. It regulates the electricity, meaning

1 in terms of approving the rates for -- for 2 electricity for locally owned utilities. 3 Commission does not set rates for co-operatives or municipalities. They have their own board who --4 who sets their rate. 5 6 And the other general role of the Commission is to review and approve permits, such 7 as the site permits, high-voltage transmission 8 9 lines for large energy facilities. legislature is very clear about what are the --10 what are the thresholds for -- for the type of 11 project, the energy project, and what's the 12 thresholds for that. 13 So for a -- for a site permit for the 14 15 solar project, that one permit is required because the facility exceeds 50 megawatts in size. 16 17 Similarly, for the battery storage 18 portion of the project, a permit is required because it exceeds 10 megawatts in size. 19 20 And for the route permit -- a route 21 permit for the transmission line is required 22 because the voltage operates more than 100 23 kilovolts and the length is greater than 1,500 feet 24 in length. 25 And -- and so after we present,

the -- the process, the due process is where we take comments. There's an -- there's an entire year at the beginning of the project. So, again, with this review process, the Commission is looking at guidance from, again, from the legislature as to what are the considerations that the Commission should be looking at in -- in granting or denying the permit application.

So these are some of the -- this
here, this slide is some of the -- This is not
complete. So the Commission looks for the
potential human and environmental impacts of the
proposed project. They look at the impacts such as
noise, aesthetics, public health, land use,
cultural and historic resources, air quality, water
quality, wildlife, fauna. And also the Commission
is always looking for ways to -- to minimize or
mitigate any -- any -- any impacts.

This project is being proposed to provide power because the -- the electric systems in Minnesota need to be kept reliable, and the generation is shifting from -- from traditional power plants to renewable sources. So this project is being looked at in the context of maintaining and -- and -- and the system reliability overall,

which is also being referred to as the grid, the 2 power grid so. And -- and the cost is also a factor. 3 4 So the process of constructing, operating, and maintaining the facility are also looked at because 5 ultimately the -- the electricity ratepayers and 6 customers will pay the rates. They are the ones 7 who will be paying for this project. 8 9 We don't know -- the company does not 10 have a designated goal on paper, but I think they will be looking at and -- and identifying the local 11 utility or a large industrial customer who will 12 13 benefit from that power generated by this project. MR. MICHAEL ODENTHAL: 14 So you don't 15 even have a customer in mind when you're going to build this? 16 17 MR. CEZAR PANAIT: I don't know 18 myself, but I will tell you the company, more than 19 likely they do, so I will let them speak about 20 that. 21 So we have the schedule here. So this 22 is a year-long process that I was -- I was 23 So -- so the application was -mentioning. we can look here, but the Commission met in an open 24 25 meeting back in December and they reviewed the

applications. We have two applications. There's a joint application for a site permit for the solar battery storage and they have a separate route permit application for the transmission line.

So the Commission took up both -both of these applications back in December, and so
we have to look at the completion of the
application to make sure that the application -And there's copies for reference on the table.
They include all the requirements in terms of
information, data that's required as part of the
statutes and the rules. So the Commission deems
those applications as being complete.

So as part of the due process we are doing here tonight, we started at that point, from December. And the remaining timeline, so we are meeting here tonight on the scope of the -- the environmental assessment. We are meeting tomorrow virtually via WebEx. And the meeting tomorrow with the Commission, about how to attend that, is also included in the notice.

After that we have the big milestones, and they are based on some intermediary milestones, but we -- we just took it to -- like a high level finally. So there will be an EA --

Environmental EA, I think it is. The EA decision 1 2 in March, and Logan will talk about that. And then 3 the actual environmental document later on in July. And then we will be meeting most 4 likely here. We like this venue and we'll propose 5 this to the judge and the judge will perhaps agree. 6 So we'll be meeting here in August of this year. 7 And then following that, the judge 8 9 will be compiling that report that I mentioned about, the findings of fact, the conclusions of 10 law, and recommendation, and submit that record in, 11 formally submit it to the Commission, in November. 12 And then shortly after that, within 13 60 days, we will be -- or the Commission will be 14 15 meeting one -- one more time in an open meeting, open -- open format at the Commission's 16 17 headquarters in St. Paul to debate and -- and 18 decide on -- on an outcome for the -- for the permit applications. 19 20 So there will be a comment period. 21 The comment period actually is open ever since 22 we -- we sent out this notice for the meeting in 23 December, December 26th, but the important date to remember is the deadline by which Logan is 24 25 expecting the comments because, again, the

comments -- I mean, we take comments regardless of when you have comments here in the year's process, and those comments go to the Commission.

about a -- the environmental document, Logan will ask you to please send those comments to Logan. And these are the -- the three ways that the comments will be received. Either you go online and there is a link where you can -- you can type your comments live once you get to that website, or you can e-mail them to Logan, or you can use the mail, handwrite or type them and -- and -- and mail them through the mail service.

And then when you do the comments, I
I may just ask you to please focus your -- your
comments on -- on some of the issues that the
Commission will deal with in the meeting notice.
Again, going back to the same, what are -- what are
some of the potential human and -- and
environmental impacts that you see being caused by
this project, ways to minimize, avoid, mitigate
those impacts. And then if you know there are
specific characteristics of the project that can
be -- can be avoided or mitigated, please go ahead
and identify all those.

And then on the right side of the page is more information, additional sources of information where you can find out more about this project. The comments, you can go into a project specific website, this is a hot link, and you can -- you can go in there and learn about the -- the applications, you can learn about major documents.

And then if you want to find out everything about the record, you can visit the Commission's edocket system, which is an internal filing system. Once you go to the Commission's website, you will -- which is MN.gov/PUC, and then you go to edockets, and there you have to enter the docket numbers. Then for this project, the docket numbers are the three ones that are on the -- on the front page, or 23-423 is for the solar, 24-283 is for the storage, and 23-425 pertains to the transmission line.

And you can -- Sorry. You can subscribe to the docket again by providing your -- your e-mail address. When you subscribe, you get -- every time there's a new document being filed, you will get a little notification, and you can go in and see what that new filing is about.

1	And then there is also the contact.
2	So we have Logan Hicks here, and this is me,
3	Cezar Panait. So you can e-mail me or actually
4	phone me.
5	So I just want to remind you that the
6	Commission is a neutral party to this by by
7	statute. We don't get involved into I mean,
8	personally. Even the staffers, we even list the
9	staffers and the commissioners themselves. I don't
10	concern myself with the matters regarding the
11	merits of this project.
12	MR. MICHAEL ODENTHAL: Who pays you?
13	Who pays you?
14	MR. CEZAR PANAIT: The State of
15	Minnesota.
16	MR. MICHAEL ODENTHAL: Who pays you?
17	MR. CEZAR PANAIT: The State of
18	Minnesota.
19	MR. MICHAEL ODENTHAL: So you're
20	representing the State of Minnesota here?
21	MR. CEZAR PANAIT: Yes, sir.
22	MR. MICHAEL ODENTHAL: So you're not
23	impartial.
24	MR. CEZAR PANAIT: Yes, I am impartial
25	to the project because by statute and by rule

1	MR. MICHAEL ODENTHAL: You're not
2	impartial. If you're getting paid by the State of
3	Minnesota, you're not impartial here.
4	MR. CEZAR PANAIT: No, because there's
5	established law, there's statutes and rules that
6	describe precisely how these projects have to be
7	MR. MICHAEL ODENTHAL: You're not
8	impartial in all this. You were brought into this
9	first instead of having somebody file and have you
10	file this meeting afterwards.
11	MR. CEZAR PANAIT: That's
12	MR. MICHAEL ODENTHAL: That's what
13	you would have done if you were impartial. You're
14	not impartial.
15	MR. CEZAR PANAIT: I don't
16	MR. MICHAEL ODENTHAL: You all have
17	an agenda.
18	MR. CEZAR PANAIT: I don't want to
19	speak for the applicant, but I know there is some
20	outreach when the project reaches the the
21	level
22	MR. MICHAEL ODENTHAL: You're still
23	liable for what's going on here.
24	MR. CEZAR PANAIT: So, like I said,
25	I I don't get involved into the merits of the

1	project. We have to analyze the facts and the data
2	that is being provided, comments we receive from
3	people like you, agencies. We are not part of the
4	Department of Transportation, the MPCA. So all the
5	state agencies, we are not
6	MR. MICHAEL ODENTHAL: Exactly.
7	You're not impartial.
8	MR. CEZAR PANAIT: I'm
9	MR. MICHAEL ODENTHAL: I don't hear
10	you
11	COURT REPORTER: Excuse me, sir. I'm
12	going to ask that you come to the podium and state
13	your name and spell it, please.
14	MR. MICHAEL ODENTHAL: Do I have to do
15	that now?
16	COURT REPORTER: You have to
17	MR. MICHAEL ODENTHAL: Can I ask
18	questions now?
19	MR. CEZAR PANAIT: No. Just wait.
20	Sorry. Just wait.
21	MR. MICHAEL ODENTHAL: You're just
22	rambling on.
23	MR. CEZAR PANAIT: I am done. I'm
24	done. And then we have a project advisor,
25	Jacques Harvieux. He's back in the office and he

1 also is -- his job is to help people learn how to 2 get involved or when can they comment, when is my 3 next opportunity, what is the filing that was just 4 So any questions about the process. made. 5 and -- so we can -- we can certainly attempt to answer those. 6 And as far as the merits and as to 7 that, those merits will be analyzed by the 8 9 commissioners by looking at the full docket. The 10 judge will be compiling and making her recommendations, and the commissioners 11 themselves --12 MR. MICHAEL ODENTHAL: 13 How can the merits be analyzed if you don't even know who 14 15 you're selling -- selling your energy to? MR. CEZAR PANAIT: No, that will be --16 17 that will be divulged. That will --18 MR. MICHAEL ODENTHAL: You're -you're looting our property rights on pure 19 20 speculation here on what you think you can make by 21 your investment. That's what you're doing --22 MR. CEZAR PANAIT: We're not --23 MR. MICHAEL ODENTHAL: -- by not compensating anybody locally. You think that's 24 25 This isn't funny. funny.

1	MR. CEZAR PANAIT: No, no. No, it's
2	not it's not funny. I mean, it's just we have
3	to
4	MR. MICHAEL ODENTHAL: This is pure
5	speculation on your part.
6	MR. CEZAR PANAIT: No, sir. No.
7	MR. MICHAEL ODENTHAL: You said it
8	was speculation. You said you said you have
9	nobody to sell the project to yet.
10	MR. CEZAR PANAIT: No, no, no. I said
11	I don't think they have a a business to sell the
12	power to, but that doesn't mean they don't
13	MR. MICHAEL ODENTHAL: What am I
14	misunderstanding here? We're both speaking English
15	here.
16	MR. CEZAR PANAIT: Yes.
17	MR. MICHAEL ODENTHAL: You just said
18	you don't have anybody to sell the power to.
19	MR. CEZAR PANAIT: Yes.
20	MR. MICHAEL ODENTHAL: Correct?
21	MR. MICAH REVELL: Are we supposed to
22	be doing Q and A right now?
23	MR. CEZAR PANAIT: Yeah, we'll go
24	MR. MICAH REVELL: It's supposed to
25	be on the record.

1	MR. CEZAR PANAIT: Yeah, we'll go
2	Yeah. So I think the calculation
3	MR. MICHAEL ODENTHAL: You're seeking
4	somebody to buy the power that you propose to
5	create.
6	MR. CEZAR PANAIT: Yes.
7	MR. MICHAEL ODENTHAL: Yes. That's
8	speculation.
9	MR. CEZAR PANAIT: It's a state
10	agency, so the the Applicant will attempt to
11	answer all those questions, if you may.
12	Okay. So with that, we're right on
13	point. So the next item on the agenda will be to
14	talk about project specific issues.
15	MR. MICAH REVELL: Good evening,
16	everyone. My name is Micah Revell. I am outside
17	counsel to NextEra Energy Resources and also
18	Benton Solar, the Applicant here. You will hear
19	very little from me. I will speak on the legal
20	process specifically. I'm going to pass the the
21	mic here to Adam Gracia.
22	MR. ADAM GRACIA: Good evening,
23	everyone. My name is Adam Gracia. I'm a senior
24	project manager with NextEra Energy Resources and
25	the project developer for Benton Solar.

Next slide, please.

So this is the agenda that we're going to cover today; the overview of the Applicant and the project as a whole. I will go through the timeline and the benefits, excuse me, and go into the different portions of the project, the solar project, the battery storage project, and the transmission line.

Next slide, please.

So Benton Solar, LLC, is a wholly owned, indirect subsidiary of NextEra Energy Resources or NEER. NEER is the world's largest generator of renewable energy from wind and sun. We're also an industry leader in battery storage.

The Benton Solar project is comprised of solar generation facilities, a battery energy storage system, and a transmission line.

so the proposed project is located entirely in Benton County, Minnesota, specifically in Minden Township, and is made up of three components: Solar generating facilities of 100 megawatt will generate clean, renewable energy in the state of Minnesota. The battery energy solar facility has a 100 megawatt, four hour energy solar system. It can store up to 400 megawatt hours of

1 renewal energy generated by the solar facility and 2 it can also charge the grid. 3 Both the solar and the battery storage facility will share a half mile 4 transmission line of 115 kV transmission line, 5 which will connect our collector substation to the 6 Great River Energy Benton County substation. 7 This transmission line is located 8 entirely on private easements. We're not utilizing 9 any public right-of-way for the project. 10 So here's a quick overview of the 11 project timeline. We submitted our application, 12 again, in September of last year. At the end of --13 on December 19th, the application was deemed 14 15 complete, as was mentioned. Our next step, as we go through the 16 17 permitting process, will be procuring major 18 equipment for the project in the first quarter of this year. We expect a decision by the Public 19 Utilities Commission by the end of this year, and 20 21 then construction would begin the second quarter of 22 The project will be operational by the end 23 of 2027. So there's a lot of benefits that 24 25 come with this project. There's a significant

capital investment in Benton County, so over \$300 million for the solar storage project. During construction there will be approximately 150 to 300 temporary construction jobs. Again, that will be in 2026 to 2027. There will be also two to three full-time jobs to operate the facility.

During the construction period you'll see an increase in local business, and during the entire life of the project will be annual payments to the landowners who are hosting the infrastructure. But beyond that, there's benefit to the greater community, so we are paying a production tax to the State of Minnesota -- sorry, not to the State of Minnesota, but to Benton County and to Minden Township. So we estimate \$200,000 a year in production -- solar production tax payments going to Benton County and \$50,000 per year going to Minden Township.

The battery storage project also provides a wide range of benefits. It provides grid stability and reliability. We'll go a little bit more in depth on the battery storage project in the coming minutes.

And then also involved will be local organizations. So we want to be a part of the

1 community in Benton County, and, you know, as we'll 2 show in our slides, we've been doing that for the 3 last couple of years and it's something we want to continue doing. 4 Here's an overview of our preliminary 5 site plan. So on the left you'll see solar 6 facilities, and the orange box on the left is the 7 battery storage facility. Those are going up in 8 9 the corner over here. So on the right is our 10 transmission line. So, again, it's a short half mile transmission line located entirely on private 11 land. 12 Next slide, please. 13 The Benton Solar project will 14 15 generate up to 100 megawatts of clean, renewable The site will utilize approximately 600 16 energy. 17 acres for the photovoltaic panels, access roads, 18 and the collector substation. The project will utilize a tracking 19 20 rack system for the solar panels, which means they 21 will track the sun throughout the day so they won't 22 always be facing the same direction. 23 Next slide, please. They will be connected via 24 25 underground 34.5 kilovolt collection lines. These

lines carry the power that's generated from the solar panels to our collector substation. The collector substation will then step the power up from 34.5 kilovolts to 115 kilovolts and will be carried through the transmission line.

helps optimize the way we -- the power grid delivers electricity to customers. So it helps smooths out fluctuations in frequency and voltage and reduces energy losses and waste. It reduces some of the need for system upgrades to the grid as a whole and extends the hours a renewable energy project can operate. So, you know, during the -- during the day, the solar project is charging the battery, and when the sun goes down, the battery can discharge that to the system.

So the battery facilities are comprised of large containers which are filled with racks of smaller battery cells. It's a relatively small footprint for the amount of energy it can store. For this project it will be approximately 176 containers. And, like I said, it stores power and provides energy when needed. So when energy demand is low, the batteries can charge from the solar project connected to the grid and can store

1 that energy, and then when demand is high, it can 2 discharge that energy to meet the current demand. 3 And they are also long-term 4 investments. We expect the batteries to be operating for the life of the solar project. 5 6 So our battery design will incorporate the latest National Fire Protection 7 Association and Underwriters Laboratory safety 8 standards which are, you know, key aspects for 9 There are new codes and standards to 10 safety. address all fire risks and mitigation in our 11 design, and we take those into account in our 12 equipment procurement, equipment selection, and our 13 actual construction and operation of the facility. 14 15 This includes a first responder orientation and site-specific safety plans. 16 17 we've already started that outreach with the local 18 fire department and Benton County Emergency Management Office. We provide a battery 19 20 orientation, which shows them exactly, you know, 21 what -- what the infrastructure looks like and we 22 talk through the fire safety and mitigations that 23 we have. We also have remote monitoring for 24 25 the battery storage facility, so we have a 24/7

remote operations control center, which can monitor the status of every single battery cell and identify multiple conditions as they come.

Again, safety is our number one priority with our battery storage facilities. The safety of our employees, neighbors, and the public are always top of mind for us. So, again, that comes from the testing and the standards and the codes that we need to meet as we procure the equipment and install and construct the battery and then also through the life of the project's operation.

The last portion of the project is the transmission line. So, again, this is a half mile 115 kV transmission line that delivers the power generated by the solar project, the solar battery project, to the point of interconnection. That's the, again, the Benton County substation, which is managed by NEER.

The transmission line, again, is entirely on private easements. The map that we have over there shows where it's going from our collector substation straight into Great River Energy's larger substation.

The actual structure height will vary

1 depending on the terrain as we cross the property 2 but will not exceed 110 feet above the ground. Here's a list of some, but not all, 3 stakeholder outreach that we've done to date. 4 We've been developing this project for a few years 5 Our focus has been on advising, educating, 6 now. and consulting with the community on this project. 7 So, again, this is a list of some of 8 9 the agencies that we've reached out to, but not all, and this is an ongoing effort. It doesn't end 10 It's something we will continue doing 11 here. through the development of the project, the 12 permitting, construction, and operation. 13 That's it. So thank you all for 14 coming out. We look forward to working with 15 everyone here to move forward with this project. 16 17 Again, I just want to highlight that 18 this is a significant capital investment to the 19 county here; again, over \$300 million. There are 20

this is a significant capital investment to the county here; again, over \$300 million. There are benefits to landowners and small businesses, to the community as a whole through our solar production tax that we will pay, and there will be environmental benefits of, you know, bringing 100 megawatts of clean energy to the grid and helping Minnesota meet their state goals for carbon free

21

22

23

24

25

1 energy.

And like I said before, the community engagement that we shared before, that doesn't end today, but it goes on through the life of this project. We want to be a part of this community, you know, for the entire 30-year life of the solar project.

Here's some information on the project. We have a website and e-mail,

BentonSolar@nexteraenergy.com. That also has my cellphone and my personal e-mail if you would like to reach out to me directly for any questions or comments on the project.

MR. LOGAN HICKS: Thank you, Adam.

As he said before, my name is Logan Hicks. I work with the Department of Commerce. My position is environmental review manager, and what I do there is I create the environmental assessment document that will be reviewing the project.

And I'll go a little bit more in depth on that, but I just want to start out by thanking everyone for coming out tonight.

Everybody coming here helps makes my job easier and it will help direct the focus of my environmental assessment, which I'll go over more here in a bit.

I want to go over tonight. The Department of Commerce, Energy Environmental Review Analysis, that's my unit. I'm going to kind of cover what we do. I'm going to talk a little bit about the environmental review that I -- you know, that I write for this.

Then we're going to talk about how to comment on different things you would like to see in the review, and then we can also finish with questions or have a little Q and A session at the end as well.

So the Department of Commerce is tasked by the Public Utilities Commission to prepare an environmental assessment. Now, this environmental assessment is just a -- it's a lengthy environmental document. It will cover a few different things, but the objective of the environmental assessment itself is to evaluate potential human and environmental impacts. It is -- it looks at different strategies to help like avoid or minimize -- minimize or mitigate those impacts.

The design is that it's supposed to be a neutral third-party review of just, this is

the project, this is what it will do to the environmental if it's put in place. And the idea is that this is a document that is going to be given to the PUC so they can make an informed decision on should this go or should it not, right, and what are the impacts that are going to happen.

So the big reason we're here today is for the public information scoping session here.

We want to gather from everyone here the different environmental factors that we should be looking at.

there is a draft scoping decision and there's a table of contents, if you would, there that kind of covers the different environmental impacts that we look to standard, but, however, there's -- it's -- it's kind of a broad shot. We're kind of casting a wide net there, and we really want to focus that in on, you know, things you guys care about because this is your community and this is -- you guys know it better than, you know, us. I live an hour and a half away so, you know, I want to know what you guys think, I want to know what I should be looking at in this environmental review document.

So some things to look at are like different impacts, like different things. Like if

1 you notice, you know, there's a river or a creek 2 running through there that we didn't see on the map 3 or something and you want us to call that out, that's a good thing to bring up to me, you know. 4 5 Different ways that we can strat -- different strategies we can use to help like mitigate 6 7 impacts, you know, that would be adverse to you 8 folks; right. 9 If there's different things like specific permit conditions that you would like to 10 see, you can recommend those and we'll take a look 11 12 at it. You know, anything that -- anything that 13 you guys notice that wasn't in the draft -- in the application that you would like me to look at, I 14 15 will, you know, take that into consideration for 16 sure. 17 So, yeah, I will do a -- I'll do a draft scoping decision, and that will come out 18 when -- He -- he has the timeline there. 19 I forget 20 exactly. 21 MR. CEZAR PANAIT: March. 22 MR. LOGAN HICKS: March, March of this 23 That's when I'll have the draft scoping decision out and then in July I'll have the 24 25 environmental assessment.

so there's also a transmission line associated with this, and transmission lines, we take route alternative suggestions with those. So if it's going through something or over something that, you know, you feel is going to be impactful negatively, negatively impactful, you can make a route alternative suggestion.

Now, those -- the best way to do
those is to say, hey, it's going through this and
we're going to have to cut down a lot of trees, why
don't you put it through here and we won't have to
cut down so many.

Now, granted, that is an example. I don't know if this line is actually going to have to cut down any trees. That's just an example. The idea is that you present the impact and present the mitigative, you know, route alternative.

You can't -- you can just say, I don't like it going there because I don't like it going there, but that's not really mitigating any sort of impact; right. So it's best to have, you know, a viable option there and make sure that it's also feasible. You know, you can't say, why don't you go five miles west, ten miles south and, you know, five miles east again; right. Like that

doesn't make any sense; right.

So please make it feasible for us to look at, and it has to have a mitigative impact, impact mitigation.

So this is the way to comment that

Cezar kind of went over. There's the web address

there. You can e-mail me. You can send me a

letter in the mail. You can even -- Over there is
a comment form. You can trifold it and put a stamp

on it and it will go right to me. But if you want
to fill it out tonight and leave it here with me as

well, I'll take those.

We will also have the option to come up and speak at the end. You know, you can ask questions or you can say, hey, this is how I feel about things. You know, whatever you guys want to do, how you want to get it to me. You can do it any way. You just can't call me because it has to be on the record, and we have the court reporter here putting everything on the record today.

And just make sure you have all those comments to me by January 31st. That is -- you know, just by the end of the day January 31st will be great. If it comes in a little later, that's fine, you know, but try to be timely with it,

1 please. 2 So some commenting etiquette today. Commenting and questions, anytime we're doing a 3 verbal, you know, questioning or commenting up 4 5 here, please just one person at a time. We'll call you guys up. Please state and spell your name 6 clearly so our court reporter can, you know, have 7 it written down on the record. 8 9 Please limit your comments to a few 10 minutes. We don't want, you know, 30-minute, you know, filibusters going on here, please. 11 12 And always maintain respect for 13 You know, everyone has different opinions, everyone has different views. So no name calling, 14 15 no jabbing at anybody, and please try to direct your comments to the scope of the environmental 16 17 assessment. You know, that's the main reason we're 18 here today, but, yeah, try to really focus on that. 19 All right. So with that, we will 20 call some people up. I don't think anybody signed 21 up on the paper. 22 Cezar, will you check, please? 23 MR. LOGAN HICKS: On the screen here is just some topics to think about while you're --24 25 you know, I guess in your head planning if you

i	
1	would like to ask any questions or have any
2	comments.
3	Nothing, Cezar?
4	MR. CEZAR PANAIT: No.
5	MR. LOGAN HICKS: All right. So would
6	anybody like to speak?
7	MR. MICHAEL ODENTHAL: I would like
8	to speak.
9	MR. LOGAN HICKS: Please come up.
10	MR. MICHAEL ODENTHAL: I use this?
11	MR. LOGAN HICKS: Yes.
12	MR. MICHAEL ODENTHAL: Michael
13	Odenthal, O-d-e-n-t-h-a-l.
14	First question, how many of you live
15	by the proposed area? Any of you?
16	You said that you were going to be
17	part of the community. Is that like the long
18	distance part or where is that? I mean, how are
19	you going to be part of the community. You're not
20	part of this community.
21	MR. ADAM GRACIA: So once it's
22	operational, we will have two to three full-time
23	employees who are NextEra Energy Resources
24	employees who are going to be living and working
25	here.

1	MR. MICHAEL ODENTHAL: Local people?
2	You're going to you're going to have local
3	people in that facility, is what you're saying?
4	MR. ADAM GRACIA: Correct. Working
5	working as the operations and maintenance people.
6	MR. MICHAEL ODENTHAL: What's really
7	insulting about all of this is you guys just came
8	in, never spoke to any homeowners in the area,
9	never offered us any compensation for what you know
10	is going to devalue our properties. Not one of
11	you, especially you, (gestures) came to our homes
12	and knocked on our doors and said, hey, this is
13	what we're proposing.
14	You just assumed that we're going to
15	roll over like a couple of these other guys did and
16	this is just all going to be all right. Correct?
17	That's just what you guys assumed. Well, that's
18	not the way it is.
19	What what's your expected
20	revenues? I mean, when this is up and running,
21	what are you going to be making on this
22	profit-wise? I'm a business owner. What are you
23	going to be making in profit? Don't tell me you
24	don't know. What is it? Throw me a number.
25	MR. ADAM GRACIA: So we're still in

1	ongoing negotiations for an off taker so we
2	MR. MICHAEL ODENTHAL: Oh, come on.
3	Come on. I'm being honest with you here, be honest
4	with me.
5	MR. ADAM GRACIA: I am.
6	MR. MICHAEL ODENTHAL: What is your
7	number?
8	MR. ADAM GRACIA: I can't share that
9	at the moment.
10	MR. MICHAEL ODENTHAL: Of course you
11	can. Of course you can.
12	MR. ADAM GRACIA: However
13	MR. MICHAEL ODENTHAL: Do you know
14	how much our homes are going to be devalued? Three
15	to five percent because of you putting your stuff
16	in, and we were never even consulted about this.
17	And you think this is funny, and you
18	as an attorney, you should know better than this.
19	This is going to a class action suit. It is.
20	Seriously.
21	You have you don't I just
22	don't understand how you how you believe we
23	don't deserve compensation for what you guys are
24	going to be making million of dollars on. Why is
25	that? You're part of the community; right? How do

1	we not deserve that? You even even suggested
2	that.
3	Answer? Nobody? No answers? You,
4	no answers?
5	MR. ADAM GRACIA: Sir, in our
6	application we did a market impact analysis looking
7	at specifically at property values across from
8	Minnesota solar projects. We've gone there was
9	no
10	MR. MICHAEL ODENTHAL: Baloney. Look
11	it up online. You go online, do a Google search,
12	and it's right online.
13	I don't care what you what you
14	guys say your project came up with. It's right
15	online. This is ridiculous.
16	So my phone here, I have all my
17	neighbors on here. It says we are filing a class
18	action suit, send it. I just sent it. I'm not
19	dealing with you guys.
20	MR. LOGAN HICKS: Okay. Anybody else?
21	Yeah.
22	MR. JEFFREY REED: Hi. My name is
23	Jeffrey Reed. J-e-f-f-r-e-y, R-e-e-d. I live at
24	7634 R. Mitchel Court Northeast. It is a
25	development neighborhood adjacent to the project.

I just want to talk a little bit about what it means to me and my family. I think I'll just start with what we call our place. We call it the Green Ranch. It's supposed to be the place where we live forever. My son will be born in a month from now, and I want to raise him there and maybe have more kids too. It will be a dream that this property stays in our family forever.

And it's an amazing place to live.

We love it. We've invested our lives and our

careers into this place. Our mortgage is a really

good decent payment. And, you know, the

development out there, these are really nice houses

and this -- and this is where we see ourselves. I

can't speak for everyone, of course, but my wife

and I, this project is harmful to us.

We -- we chose to build out there because of the beautiful, pristine wilderness and the wildlife, and we love -- we love the way it looks as it is. We love the country feel of the trees and -- and everything. And we certainly didn't want or need an infrastructure like this to be out there. It will impact us. We will see it in our drive from and everywhere we go. We'll see it when we're taking our dog out for a walk.

1	Yeah. So, I mean, it it's a big
2	deal, and I know everyone kind of feels this way
3	and it was a huge a huge surprise when this came
4	about.
5	Anyway, as far as some suggestions
6	here, I you know, my first preference would be
7	that it not take place at all or that it would be
8	far away from us, but with a company of this
9	stature and the interests of the government and the
10	capital gains here, it's probably going to happen;
11	right?
12	MR. MICHAEL ODENTHAL: It's not going
13	to happen.
14	MR. JEFFREY REED: I hope not.
15	MR. MICHAEL ODENTHAL: It's not going
16	to happen.
17	MR. JEFFREY REED: I certainly hope
18	not.
19	MR. MICHAEL ODENTHAL: It's not going
20	
	to happen.
21	MR. JEFFREY REED: But installing
22	some kind of a fence, you know, a hill or a berm
23	with trees planted around impacted property owners
24	would be extremely reasonable and an absolute
25	expectation. I would be pretty disappointed in

1 government officials if something like that wasn't 2 expected of this -- this company. And in addition to that, as this 3 gentleman mentioned, it's going to impact our 4 5 property's value. It just will. There's -research that you're pointing out is illegitimate, 6 because if you were to be buying a property, 7 looking at one with a solar farm right next to it 8 9 versus one that doesn't have a solar farm right next to it, that would be a definite con if you're 10 looking to buy a home. And so some type of 11 financial compensation seems more than fair, and my 12 first request would be that we weren't in that 13 situation at all. 14 15 But, yes, I hope that government officials and -- and folks here protect us. 16 17 I'm here -- I'm here just sharing my thoughts and 18 feelings, and I hope they're considered in the ongoing development and management of this permit, 19 20 this project. Thank you. 21 MR. LOGAN HICKS: Thank you. Would 22 anybody else like to comment? 23 MS. TAMARA SELL: My name is Tamara Sell, and we live in the old Gene Maleski 24 25 (phonetic) place, and we've been there for five,

almost six years, and chose it for some of the very same reasons you did with your family. And I can sympathize that you feel the same way. And also I am part of the frustration and, frankly, anger that this has been thrust upon us.

And I have some questions and things today just to point out. In speaking with my insurance agent today, those of you who have the opportunity to have these panels on your land, you will need to be insured, and insurance, which as we all know, is a nightmare already, because of the value of the equipment.

And I would like to know how this is going to affect our taxes, which are already extremely high. I'm concerned about the property value decreasing, and if that's something that none of you feel is going to be an issue, I would like to see proof of that.

And I also do wonder with my whole heart if any one of you would be willing to be in this same situation and not be concerned if you would be okay with parking your families right up to whatever kind of radiation is going to be emitted from these battery storage facilities. We haven't heard anything about emissions or the

cadmium and lead that's going to be running in -you know, run off into our soil and our water.

The impacts to our environment, which is -- you know, I don't know how the deer hunters are going to feel when there's no deer left.

There's birds and we have some God-awful turtle that scares the heebie-jeebies out of me because he lives in my back yard, and all of these kinds of things.

I'm curious about what kind of batteries are going to be used, like I said, and the emissions.

I'd like to know how many of these large energy plants exist. Do they exist in Minnesota? A little bit more about the company that's overseeing this project. And if these large energy plants exist, do they usually come in junction in with a battery storage facility; does that exist. What have been some of the ramifications of all of that.

I'm curious about the construction jobs and who will employ them. Are these going to be contractors or are they going to be employees of the state? Who's going to be running around in my front yard for the next year? I'd like to know.

We all have families and I think that could be a 2 safety issue as well. 3 And this road that we just paved with 4 our taxes to have done, is going to be where all of 5 these big cranes are coming through, and why did we do it last summer if this is going to come through 6 and tear it up now. That doesn't make sense to me 7 8 either. 9 This \$200,000 tax benefit, is that 10 going to these people who have this equipment on their land or -- or how is that going to be 11 allocated; you know, how that gets disbursed. 12 And I'm also curious, the -- the 13 people that did sign these leases, what -- it seems 14 15 to be a couple landowners that own a lot of these parcels that got to make this even a possibility to 16 17 get pushed this far. So I'd like to know how 18 disbursement of that goes. If there is just one landowner that owns the majority of these parcels, 19 20 if there's some sort of -- You know, we can find 21 out legal ways too, but --22 MR. MICAH REVELL: Ma'am, if I can 23 just stop you for a second. 24 MS. TAMARA SELL: MR. MICAH REVELL: We're happy to 25

1 answer those questions. We're having trouble 2 writing them all down. 3 MS. TAMARA SELL: Okay. MR. MICAH REVELL: So maybe we can 4 5 take them in sequence. I think Adam has got the majority of them, but maybe a refresher if we miss 6 That would be helpful too. 7 some in responding. MS. TAMARA SELL: Here you go. 8 9 never used one of these. Do I need to turn it off? 10 MR. LOGAN HICKS: No. You can just set it down. 11 Thank you. MR. MICHAEL ODENTHAL: 12 I've got a 13 question. Michael again. Why this area? Why here in a residential neighborhood? Why? 14 There's thousands and thousands of bare acres. 15 Because of those guys right there? Because they --16 17 they signed off? Is that what it was? 18 I mean, did you guys go like door to door trying to find a spot for this project and 19 20 land on a few people that would sign off? I mean, 21 why this area? Why in a residential neighborhood? 22 Like that guy said, there's all kinds of brand-new, 23 beautiful homes built on the other side of the road and you're going to destroy their lives, their home 24 25 values, and everything else. Why this area?

1	MR. ADAM GRACIA: So a couple of
2	factors go into site selection; all right. So one
3	of the
4	MR. MICHAEL ODENTHAL: No, no, no.
5	Don't don't go into the jargon. Why this area?
6	There's any kind of other area, anywhere in the
7	state of Minnesota, where there's nobody around
8	that you could have put this project. Why did you
9	choose this particular area?
10	MR. ADAM GRACIA: So this project was
11	sited here due to solar resource, so we anticipate
12	getting
13	MR. MICHAEL ODENTHAL: Oh, so the sun
14	shines here. Solar resource, is that science?
15	MR. ADAM GRACIA: That's the first
16	factor. Minimizing environmental impacts,
17	having
18	MR. MICHAEL ODENTHAL: But you're not
19	minimizing environmental impacts here.
20	And you guy over here, how many birds
21	a year are killed by solar panels? Birds that fly
22	into solar panels, the hot the hot solar panels.
23	Have you looked that up?
24	MR. LOGAN HICKS: I can for you.
25	MR. MICHAEL ODENTHAL: Okay. Go ahead

1	and look it up.
2	MR. LOGAN HICKS: Okay. Right now?
3	MR. MICHAEL ODENTHAL: And on top of
4	that, why this area?
5	MR. ADAM GRACIA: So another key
6	factor for the site location is the proximity to
7	the point of interconnection. So the Benton County
8	substation has capacity for the 100 megawatts of
9	solar that we're trying to construct. The half
10	mile transmission line
11	MR. MICHAEL ODENTHAL: So is Benton
12	County is Benton County the one that absolved
13	you guys into choosing this site? So, again, you
14	chose this site; correct?
15	MR. ADAM GRACIA: Yes, sir. The fact
16	that
17	MR. MICHAEL ODENTHAL: Why? There's
18	all kinds of other properties everywhere else. Why
19	here? Why next to a residential neighborhood?
20	This is ridiculous.
21	And then not not to offer or talk
22	to anybody, just come in and like you're going to
23	fly under the radar until somebody blew this up,
24	and all of a sudden you guys had to have a meeting
25	here in front of us.

1	MR. ADAM GRACIA: No, sir, that was
2	not our intention. We had to
3	MR. MICHAEL ODENTHAL: Oh, baloney.
4	It was too your intention because you did it that
5	way. That's how you did this. It was your
6	intention.
7	All of you, shame on you. Shame on
8	you. You're you're going to lose your smile.
9	Shame on you.
10	This is our neighborhood. This is
11	our properties. This is our livelihood. We have
12	hundreds and hundreds of thousands of dollars into
13	our properties. You guys will make millions and
14	millions and millions of dollars on your property
15	and you will give us nothing for that. That's
16	ridiculous.
17	And you, as an attorney, know exactly
18	where this is going. Exactly where this is going.
19	Shame on all of you.
20	MS. TAMARA SELL: I
21	MR. ADAM GRACIA: Ma'am, I'd like to
22	answer your questions.
23	MS. TAMARA SELL: Okay. I do have
24	one last thing to add to my list and then I'll be
25	done.

I'm concerned about also that -- the 1 2 fire hazard or explosion risk of these -- these 3 control batteries. I know we had to pay extra for being nine miles away from the fire station with a 4 cedar shake roof. So I know these -- this is 5 outside of that risk range. 6 And we've also replaced our roofs a 7 bunch of times. We get a lot of storms. 8 Everybody in Minnesota does. So are these -- are these 9 plants also -- is there an explosion risk if we 10 have lightning storms and storms like we've had in 11 this county for the last -- And -- and if they 12 13 blow, how -- how far -- how far is -- is the impact of that? 14 15 MR. ADAM GRACIA: Thank you, ma'am. Do you mind if I still go down the list that you 16 17 talked about here? 18 MS. TAMARA SELL: Yeah. 19 MR. ADAM GRACIA: So on the property 20 taxes, on your question, so the -- the taxes that 21 we're paying to the county is a solar production 22 tax for putting our infrastructure on that 23 property. So we are paying -- we make an annual 24 payment to the tax assessor for Benton County. 25 They -- however they use that tax dollars is just

1	how they would use property tax dollars.
2	So by putting this infrastructure on
3	there, we are adding to the tax base for Benton
4	County and Minden Township, so we don't expect any,
5	you know, impact or any increase on your property
6	taxes for what we're installing.
7	MS. TAMARA SELL: All right. All
8	MR. MICHAEL ODENTHAL: Why why is
9	no one from Benton County here?
10	MR. ADAM GRACIA: Sorry?
11	MR. MICHAEL ODENTHAL: Why is no one
12	from Benton County here?
13	UNIDENTIFIED SPEAKER: You have three
14	of us back here. Four of us.
15	MR. MICHAEL ODENTHAL: Great.
16	Congratulations, guys.
17	UNIDENTIFIED SPEAKER: So we signed
18	declarations
19	MR. MICHAEL ODENTHAL: How close do
20	you live to this?
21	UNIDENTIFIED SPEAKER: I actually
22	live right in town here so.
23	MR. ADAM GRACIA: I'd like to
24	UNIDENTIFIED SPEAKER: I live like
25	five blocks this way.

1	MR. MICHAEL ODENTHAL: Exactly.
2	COURT REPORTER: You can't have
3	people just talking
4	MR. LOGAN HICKS: Sure. If we can
5	have the inner talking for after, you know, this is
6	done because this is all on the record and our
7	court reporter needs to make sure everything gets
8	on the record, please. Thank you.
9	MS. TAMARA SELL: And is that \$200,000
10	also, is that if
11	COURT REPORTER: Please come up to
12	the podium if you're going to speak.
13	MR. ADAM GRACIA: I think your
14	question was, will that money go towards the roads
15	that are used for construction. I'll answer that
16	question now.
17	So, you know, prior to starting
18	construction, we're going to enter into a written
19	agreement with the county. We are going to assess
20	the status of the roads prior to bringing this
21	equipment on the road and the company will be
22	liable for any damages or upgrades that are
23	required to those roads to support our
24	construction.
25	I think your next question was on

1 construction jobs and who will employ them. So our 2 intention for this project is to use local union 3 labor for the project. We are in the process of selecting a general contractor right now. That is 4 our intention for construction. 5 6 MS. TAMARA SELL: Do those (Court reporter is unable to hear 7 8 So they will be contractors -the comments.) 9 MR. ADAM GRACIA: For the construction. So the full-time maintenance and 10 operation will be employees. 11 12 MS. TAMARA SELL: Okay. MR. ADAM GRACIA: 13 So your question about large energy facilities. 14 So NextEra Energy 15 Resources has been investing in Minnesota since Right now we have two operational wind sites 16 17 that are Lake Benton Wind and Walleye Wind. 18 have one solar site, Marshall Solar, and one battery storage site in the state of Minnesota. 19 20 You know, nationwide we employ --21 nationwide we have over two gigawatts of battery 22 storage at 36 operational battery storage sites. 23 So we do have a lot of experience in constructing and operating these sites safely and 24 25 effectively.

1	MS. TAMARA SELL: Have there ever been
2	any that have both of these capacities at the same
3	time? Are the solar and the battery typically
4	separate or do your other facilities have both of
5	them at the same time?
6	MR. ADAM GRACIA: That's a great
7	question. So we are starting to add battery
8	storage to some of our existing sites. So existing
9	wind sites are adding a battery storage side and
10	existing solar sites are adding battery storage. A
11	lot of projects now that we're developing are
12	projects that have solar and storage in conjunction
13	or wind and storage in conjunction.
14	MR. MICHAEL ODENTHAL: So the answer
15	is no?
16	MS. TAMARA SELL: No.
17	MR. ADAM GRACIA: I'd have to get an
18	answer for you on that.
19	MS. TAMARA SELL: So this is an
20	experiment. This has never been done before? The
21	answer is no?
22	MR. ADAM GRACIA: That is that is
23	not true.
24	MS. TAMARA SELL: It could be. Okay.
25	MS. KELLIE KRAFT: Kellie Kraft from

1	part of our engineering construction team. We do
2	have some sites in our organization that are both
3	solar and energy storage. I do not have the exact
4	number for you, but there have been several already
5	constructed and in operation.
6	MR. MICHAEL ODENTHAL: How large
7	how large of sites? And is this site larger or
8	smaller?
9	MS. KELLIE KRAFT: Probably about this
10	size. It's
11	MR. MICHAEL ODENTHAL: Probably?
12	MS. KELLIE KRAFT: I would have to
13	get the exact dimensions.
14	MS. TAMARA SELL: That would be
15	information that I think if it was true you would
16	have. And I would like I would like the names
17	and the location and the size of those, please, for
18	the record.
19	MR. ADAM GRACIA: And then in terms of
20	the types of battery and the hazards associated
21	with them, Josh, are you able to speak to that?
22	Josh Adams, he's our battery safety expert.
23	MR. JOSH ADAMS: Yeah, Josh Adams.
24	I'm the fire and safety expert for battery energy
25	storage.

1 So these are going to be a lithium 2 ion technology. These cells and systems go through various levels of vigorous safety testing. 3 are all compliant with the National Fire Protection 4 Association, NFPA-855, which is the standard for 5 the installation of energy storage systems. 6 NFPA-855 further requires that all of the equipment 7 installed in energy storage facilities need to be 8 9 listed on UL-9540. 10 UL-9540 requires that all battery energy storage systems be tested to 9540A. 11 UL-9540A is a method of forcing a worst case 12 scenario situation by actually causing an 13 environmental impact and analyzing how the system 14 does at isolating and containing those events. 15 And all of our systems have been 16 17 shown that in the event of runaway, they will be 18 isolated to the container in which they occurred. They will not spread. They will not explode. 19 20 will not put anybody in danger. 21 MR. MICHAEL ODENTHAL: I have a 22 question for you. Michael again. Do I need to 23 stand up here? Are these the same type of batteries 24 25 that burned up the cars on the ship that went down?

They lit the ship on fire and it went down in the 1 2 ocean. Are these the same type of batteries those 3 were that were guaranteed not to do that? MR. JOSH ADAMS: I don't know exactly 4 5 what technology was on that ship, but those were not operational energy storage systems that 6 have fire safety systems integral to their design. 7 MR. MICHAEL ODENTHAL: Our fire 8 9 department don't have any system to (inaudible). 10 MR. JOSH ADAMS: I'm not an expert on 11 cars. MS. TAMARA SELL: And in these worst 12 13 case scenarios, what type of -- what type -- like what is the -- what is the worst care scenario that 14 they're testing for? It can't be like everything. 15 MR. JOSH ADAMS: Well, they -- they 16 17 over spin it into a runaway. So they actually 18 force the worst case scenario to happen and then they assess the design of the system and how well 19 20 that design prevents that worst case scenario from 21 spreading to the next cell, the next module, the 22 next container; right? 23 It analyzes what the overall results 24 are when the worst case scenario happens, right, 25 and so that's where these systems are designed and

1 tested to prove that in the event, in the rare 2 event of a runaway, you will not have any 3 propagation to any of the neighboring containers. And then that way we just allow it to terminate 4 5 itself and we keep people safe as our top priority. 6 MS. TAMARA SELL: And that includes the line that's associated with this as well? 7 that tested in the same way? What happens to the 8 9 line if there's an explosion? MR. JOSH ADAMS: So the lines -- the 10 lines and all their connections get tested. 11 that will be more under Rule 9540. 12 It does require that the installation of the lines be tested and 13 that they be tested for their short circuit 14 amperage. So they are all tested and analyzed for 15 safety. 16 17 So the testing for the lines would be 18 a different type of testing than what you would do on the actual battery cells themselves because it's 19 20 not -- you know, you have a copper line versus, you 21 know, a cell, so they're going to react differently 22 in a worst case scenario, so they are tested 23 differently, but they all follow those vigorous safety standards. 24 25 MS. TAMARA SELL: And these batteries

are all the same level as the other facilities that 1 2 you -- like more powerful or have more -- you know, 3 more storage units or --4 MR. JOSH ADAMS: I mean, battery 5 technology is improving significantly as -- as years go by, so technology is ever changing, but 6 with that is also the codes and standards that 7 regulate the safety testing and requirements for 8 all these batteries. 9 10 And so relative to, say, older systems, these are going to be significantly safer 11 because they have a lot more safety standards, they 12 have a lot more regulations, as well as just 13 manufacturing processes have improved over time 14 just to make sure that these things are being 15 manufactured in a much more consistent, safer 16 17 manner. 18 MS. TAMARA SELL: Okay. And emissions, what does that look like for 19 environmental, all of that? 20 21 MR. JOSH ADAMS: Well, I mean, as far 22 as during operation, there -- there are no 23 That's kind of the idea about it. emissions. It's 24 clean energy, it's green energy. There are --25 MS. TAMARA SELL: There's no emissions

1	at all? No emissions?
2	MR. JOSH ADAMS: No. I mean,
3	basically a battery is a DC system, right, and
4	electromagnetic frequencies come from AC signals
5	and radiofrequencies, so you're going to have
6	communication devices on site, but that's no
7	different than what you already have existing in
8	electrical infrastructure that it has already right
9	now.
10	MS. TAMARA SELL: But we just don't
11	have this type of infrastructure in our private
12	homes, but now we're going to have infrastructure
13	that is significant and and maybe even hasn't
14	been done before. So do we know what they think
15	about EMFs and and how dangerous this could
16	potentially be?
17	MR. LOGAN HICKS: We actually have a
18	handout in the back there if you would like to read
19	about it.
20	MS. TAMARA SELL: I did. That's why
21	I asked the question.
22	MR. JOSH ADAMS: There's no there's
23	no risk of EMF. You're never going to get any more
24	EMF out of a battery versus the EMF that you're
25	going to get out of a substation.

1	MS. TAMARA SELL: So for the record,
2	no risk of EMFs from this project; right?
3	MR. JOSH ADAMS: There is there is
4	no risk to the surrounding areas of any EMF.
5	MS. TAMARA SELL: How far?
6	MR. JOSH ADAMS: I don't have an exact
7	number.
8	MR. LOGAN HICKS: If you have more
9	questions, we'll get to them. I just want to
10	scan
11	MS. TAMARA SELL: That's okay.
12	MR. LOGAN HICKS: the rest of the
13	room to see if there's anybody else who would like
14	to speak.
15	Thank you. Make sure you state your
16	name for the record.
17	MR. MITCH LITFIN: My name is Mitch
18	Litfin. I live at 7635 R. Mitchel Court Northeast,
19	and like my neighbors, I'm not for your project,
20	but what I am asking for as a reasonable person is
21	that you mitigate the visual impact, because when
22	I look out my window right now, I have farm fields
23	and woods, and I don't want to see this; okay?
24	I've had dealings with you before and
25	you told my wife, that's unfortunate you chose to

1	live there. That's what you said to us in a
2	crowded room. So that shows
3	MR. MICHAEL ODENTHAL: They're part of
4	our community.
5	MR. MITCH LITFIN: And I am part of
6	the community. And I'm also asking that you give
7	all the fire departments in the area training and
8	you give them money for training; okay?
9	I also want to know, how much water
10	does it take to put one of those batteries out?
11	Let's say that whole thing gets on fire. How much
12	water does it take to put one out?
13	MR. JOSH ADAMS: This is Josh Adams
14	again. Zero, because we specifically advise the
15	fire departments to not apply water to a battery
16	energy storage system if it catches on fire.
17	MR. MITCH LITFIN: So how do you
18	terminate it?
19	MR. JOSH ADAMS: You allow it to
20	terminate itself. As I just explained, these
21	things are tested and contained in such a way that
22	it does not spread to any of the nearby containers.
23	So at that point we're not worrying about saving
24	the battery in that one container. The only thing
25	that we care about is the safety of the personnel

1 and the surrounding areas. 2 MR. MITCH LITFIN: Good. Okay. Thank 3 you. That's all I have. MS. RACHEL STUCKEY: Hi. 4 Good 5 evening. My name is Rachel Stuckey, and I am the executive director of the Minnesota Conservative 6 Energy Forum and I'm appearing on behalf of this 7 organization and our program named the Land & 8 9 Liberty Coalition. We operate in all 87 counties in the 10 state, and we're a statewide education nonprofit 11 organization and advocate for all of the above 12 13 market-based approach to energy, focusing on values like affordability, property rights, personal 14 stewardship, and job growth. 15 And in general we support just 16 17 getting more energy on the grid. We can't do it 18 with all renewables. We can't do it with all of what we have right now. We just want more energy 19 20 to stabilize the grid. 21 And so I can at least speak to a 22 couple of the questions that have come up just 23 through our work as a nonprofit. We're in the field, as I said, in all the counties. 24 25 As far as the roads, a lot of times

1	companies actually improve the roads, if that makes
2	sense. So some of the township roads, you know,
3	are kind of older and that kind of thing
4	MR. MICHAEL ODENTHAL: We just got our
5	road improved. We just paid taxes to have our road
6	improved. We don't need the road past that
7	proposed site improved.
8	MS. RACHEL STUCKEY: Okay. So that's
9	fine. I'm just saying if the roads are damaged
10	MR. MICHAEL ODENTHAL: I'm just saying
11	the road is not damaged.
12	MS. RACHEL STUCKEY: In certain
13	counties, they are left better than they were
14	before.
15	MR. MICHAEL ODENTHAL: Perfect.
16	MS. RACHEL STUCKEY: Great. And then
17	townships and counties can also enter into road use
18	agreements actually as part of the project, and
19	we've seen counties drive a hard pardon with them.
20	And so from what we've seen, they worked really
21	well with with the local townships specifically
22	and counties to mitigate concerns and everything
23	so. And that's across multiple developments, too,
24	so different forms of energy. So yeah.
25	And then I think you asked about the

property -- or the tax impact. At least part of 1 2 it, I think they mentioned the production taxes, 3 80 percent, it all goes directly locally, which is 4 positive. But then 80 percent goes to the county 5 and 20 percent to the township. So that stays 6 right here. And so we've seen counties too, 7 8 because of certain projects, be able to freeze 9 property taxes for a few years or invest in their 10 local buildings and infrastructure and parks and that kind of thing. 11 12 So just wanted to address some of the 13 impacts. Thank you. MR. MICHAEL ODENTHAL: Not once did 14 15 you express that you were a homeowner in all of this, this little speech that you gave here. What 16 17 about the homeowners in all this? Everybody is 18 getting this, everybody is getting that. We aren't 19 getting nothing from you people. Nothing. 20 MR. LOGAN HICKS: Sir, if you could 21 come up. 22 MR. MICHAEL ODENTHAL: No, I'm not 23 standing up there again. It's a silly little game 24 here. 25 We're getting nothing from you

1	people. Zero, except devalued properties and a
2	bunch of BS. That's all we're getting from you
3	guys period.
4	Four of my neighbors just called back
5	and filed on the suit, by the way, within the last
6	15 minutes.
7	You think this is funny, and you
8	little guy up there, and I believe his story what
9	you said to him, I do. I can see it in him. I see
10	it like I'm sitting here.
11	So whatever kind of malarky you guys
12	have going on and all you people sitting over here,
13	good luck to you all. Good luck to you all.
14	MR. LOGAN HICKS: Again, anybody else?
15	MR. ED POPP: I would just like to say
16	on behalf of Benton County that because this is
17	more than one megawatt, the county has no
18	MR. LOGAN HICKS: Sir, could you state
19	your name, please?
20	MR. ED POPP: Oh, Ed Popp, Benton
21	County Commissioner.
22	MR. LOGAN HICKS: Thank you.
23	MR. ED POPP: The county has really
24	no say in this because the Public Utilities
25	Commission does this. This is actually the second

1	
1	one that's gone in in Benton County. There's one
2	north of Rice on between Highway 110 and
3	MR. MICHAEL ODENTHAL: You you're
4	representing us in Benton County.
5	MR. ED POPP: Right.
6	MR. MICHAEL ODENTHAL: You're not
7	representing them. Why in the hell are you rolling
8	over to them
9	MR. LOGAN HICKS: Sir, I would just
10	like to ask that we have one speaker at a time.
11	MR. ED POPP: We didn't roll over.
12	They came to us at the beginning, and then when you
13	look at the process, there is not a lot that Benton
14	County can do except
15	MR. MICHAEL ODENTHAL: Say no.
16	MR. ED POPP: No, we can't say no. We
17	cannot say no to that. We mitigate road damage.
18	We had a lot of questions for them when they came
19	about it.
20	MR. MICHAEL ODENTHAL: They're still
21	here.
22	MR. ED POPP: This is the second
23	one the second process that I've been through.
24	The other one was up by Langola Township up north.
25	The same rules apply to both of them, that you

1	cannot local officials cannot say no to the
2	Public Utilities Commission, and I think you can
3	attest to that. We can
4	MR. MICHAEL ODENTHAL: How do you
5	call it public utilities when they're profiting off
6	of our lots? How can you call it public utilities?
7	We're getting nothing. We're getting nothing from
8	this.
9	MR. ED POPP: The Public Utilities
10	Commission, from what I understand, does not profit
11	from this.
12	MR. MICHAEL ODENTHAL: They're not
13	profiting?
14	MR. ED POPP: They're not.
15	MR. MICHAEL ODENTHAL: They make a
16	profit. Come on.
17	MR. ED POPP: These guys are from the
18	state and
19	MR. MICHAEL ODENTHAL: All these
20	people on payroll here wouldn't be sitting here if
21	there wasn't huge profits involved with this.
22	MR. ED POPP: Well, I don't know about
23	that, but there has to be there has to be a
24	process, and the process is controlled by the State
25	of Minnesota, the Public Utilities Commission, and

1	we do not have a say in it.
2	There is some benefits to the county
3	as you're seeing; you know, a couple hundred
4	thousand dollars, and the county will probably use
5	that for tax relief.
6	MR. MICHAEL ODENTHAL: Baloney.
7	MR. LOGAN HICKS: Sir, I'm going to
8	ask that you just you know, you have to please
9	be quiet at your seat. If you want to participate,
10	you're more than welcome to come up and speak on
11	the record but, I mean, you're injecting when
12	others are speaking.
13	MR. MICHAEL ODENTHAL: Am I not on
14	record? I'm on the record. Thank you.
15	MR. LOGAN HICKS: I would I would
16	prefer if you came up and
17	MR. MICHAEL ODENTHAL: I just don't
18	like this malarky going on where he stands up here
19	and tells us nobody is making money. These guys
20	are all sitting here, looking around, like you're
21	here for free. You're all here for free; right?
22	MR. ED POPP: I was just telling how
23	the county
24	MR. MICHAEL ODENTHAL: Sure he was.
25	MR. ED POPP: They worked they

1	worked with us, the county, before they even
2	started, and from the research and the stuff that I
3	know, the Public Utilities Commission controls it.
4	It's not the county. It's not the Department of
5	Development.
6	And there is some benefits to the
7	county and to the township down the road and for
8	the next 45 years, you know, from what
9	I understand.
10	MR. MICHAEL ODENTHAL: It benefits the
11	value of our properties? That's a benefit to us?
12	MR. ED POPP: The only way that it's
13	going to devalue your properties is if people sell
14	them and leave to a different area and the property
15	goes unsold.
16	MR. MICHAEL ODENTHAL: We have to see
17	this for the rest of our lives now.
18	MR. ED POPP: I don't
19	MR. MICHAEL ODENTHAL: We have no
20	option. We shouldn't have moved there; right?
21	MR. ED POPP: No. That's that's
22	I mean, the other part is that I think the county
23	board believes it's going on private property.
24	These people are getting a fair amount of rent per
25	acre.

1	MR. MICHAEL ODENTHAL: Sure they are.
2	Yep.
3	MR. ED POPP: And we're not in the
4	business of telling people that have owned this
5	property for, you know, 30, 40, 50 years, that you
6	can't do with your property what you want, and
7	that's kind of how it is.
8	MR. MICHAEL ODENTHAL: Really? So if
9	I want to put a pole barn up on my property, I have
10	to get permission from you guys; correct?
11	MR. ED POPP: Correct.
12	MR. MICHAEL ODENTHAL: So how does
13	that impact my neighbor?
14	MR. ED POPP: Well, I
15	MR. MICHAEL ODENTHAL: How does that
16	impact my neighbor if I put a pole barn up?
17	MR. ED POPP: Well, we have the
18	Department of Development goals
19	MR. MICHAEL ODENTHAL: Exactly.
20	Exactly. That doesn't that doesn't devaluate
21	my neighbor's property.
22	MR. ED POPP: I was just trying to
23	explain where the county sits on this. We don't
24	want to have to tell property owners what they can
25	and can't do with their property. So if your

1	neighbor chooses to put up solar panels on there
2	MR. MICHAEL ODENTHAL: It's not
3	MR. ED POPP: that's his right.
4	It's going to generate electricity. It's also
5	going to generate, you know, economic development
6	for the county and they'll spend the money
7	countywide, do different things that help the
8	economy of Benton County, but it's not part of the
9	county's say on whether we should do that so.
10	MR. MICHAEL ODENTHAL: Okay. Let me
11	ask you one quick question then. What about
12	MR. LOGAN HICKS: Sir, you can ask him
13	a question after.
14	MR. MICHAEL ODENTHAL: No, I want to
15	ask you about a feed lot. What about a feed lot?
16	MR. LOGAN HICKS: Hey, this is not
17	pertaining to the scoping or anything. This is
18	very much a different conversation, so we're going
19	to move on.
20	Is there anybody else who has any
21	comments, any questions, anything pertaining to the
22	environmental assessment that would like to come up
23	and put on the record?
24	Yes, come right up here.
25	MS. JACLYN LITFIN: Hello. Good

evening. My name is Jaclyn Litfin, L-i-t-f-i-n, and I'm a resident within the rural area which this solar field is going into.

I can certainly resonate and understand all the different perspectives that we're hearing tonight. I think you can tell there's a lot of emotion from a lot of individuals, and hopefully you can understand where we're all coming from and the very heartfelt message that we're sharing tonight.

Similar to what Mr. Reed has said,
Benton County is my home. You know, it's where I
chose to take root. You know, when we first came
out to our property before we built, I remember my
husband looking out and saying, hey, can you
picture it. You know, we're looking out over the
road and there's farm fields on all four sides of
our property.

You know, when I think about a project like this, this is a 25- to 30-year project. That's my lifetime in this home. You know, we built this home to be our forever home, and that will be pretty much the entirety of what, you know, our active life be.

So just some of the things that I

want to be taken into consideration for the environmental aspect of it. Environmental, you know, it encompasses so many things. It's the air quality, it's the free space, it's the roads around us, it's the water, it's the soil. All those different complexities, and each one of those has an impact on our health.

I guess my concern -- my number one concern is coming from, you know, I hear all the research and the studies and the numbers being thrown out, and I appreciate that and thank you for bringing that information. But my other concern is that, you know, there's really not a lot of long-term studies about the new technology to really tell us 30 years from now, you know, if I stay in my home and I'm within whatever radius that you say is safe today, is there going to be long-term health impacts from that. So my concern is, we just don't know.

And -- and I think you guys have comfortably said that. From what I was reading, a lot of it says researchers are still looking into this. We're still looking at these studies if there is an actual cause and effect relationship. We're still looking for more than just a weak

association; right?

So the reality is, we don't know those long-term effects, and I'm really hoping when you're doing your environmental assessment and when you're considering mitigation strategies, that some of those things that you're thinking about would be increased distances from that residential area.

You know, there aren't -- when you look at the map, as far as our houses are, there's a lot of space that you could maybe avoid putting it. You know, maybe it's underground wires and it's not the -- the overhead wires. You know, is there increased distancing that you can do for the sake of being good neighbors to all of us that are living within this neighborhood and knowing that, you know, you really don't know and you really can't say with 100 percent accuracy that we won't have some type of impact.

You know, we've heard some people talk about the fire, you know, concerns, and I hear what you're saying with the technology, but I know in your application it talks about emergency action planning around fires.

We know locally there have been a few fires in the fields around us, and so those are

really important considerations that we're worried about as a neighborhood. Wild fires across the nation and the impact of smoke and dust that we're experiencing and the risk to air quality in our area.

The other thing I'm wondering about and we haven't talked about is in doing some of the research, they talk a lot about some of the hot spots of solar panels and solar fields have caused, and in a lot of studies, you know, from Germany where solar is widely spread, and you see an increase in temperature around that local area. You know, just being considerate about that, you know.

And I've heard some of the others speak about, we need to go for walks, we've got gardens, we -- we enjoy our green spaces. We moved there for that reason. And so, you know, if we're talking about long-term environmental impacts, is that something we should be worried about and have we looked at that in -- in our area.

I'm just thinking about, you know, again, it's not really just the visual nuisance. If you think about that environment again, it really is a way of life, it's not just the

aesthetics. It's our livelihood. You know, again, it's where a lot of us have built our homes. We're really invested in our local community, and I think what we're really asking, the bottom line is, hopefully you guys will be good neighbors to us. We're neat and tidy and clean. We're expected to not have piles of debris around, all kinds of different things, but we're hoping that that can be reciprocated by you coming into our community and being a good neighbor with us and working with us as well.

I think some of the others have mentioned, you know, some of the different modes of covering it. You know, it can't be avoided and you've got to have these panels, how are you going to shield them from all of us? And really, can you build a bridge, a high bridge, and put tall pine trees that will fully block our view.

You know, as I mentioned when all phases of this project is done, our cul-de-sac will be surrounded, you know, so no matter which window I look out, that's what our view will be, and that was not the view that we envisioned when we got engaged on our property and then married during COVID on our property, and we're expecting to live

the rest of our lives on our property. So I'm hoping that that can be another mitigation effort.

You know, thinking about how the environment impacts our health, not always just from a data standpoint. Sometimes it's more about a life experience too that perhaps drastically impacts our health and how those things that you're not capturing impact us.

Similar to what some of the others have mentioned, you know, the home value. I think that's a big hot topic and I think there's data on both sides; right? But one of the things that is important to remember is, data is generated on things that have happened, and if you -- but if something doesn't happen, so to speak, you know, if people aren't looking to purchase homes in our area in Benton County because they know there's solar fields there, it's almost impossible for you to capture the number of people who didn't look to move to our community because it never happened. They never were able to tell you they were looking because they never looked. So just keeping that in mind again.

You know, I think I even asked at the county presentation, you know, how many of you

would choose to live here, and nobody mentioned that they would like to do that knowing that the solar fields are going there and having to live with that.

And so hopefully you're keeping those things in mind in ways of shielding, so that when we do, if we ever do choose to move, or if others want to move into our community, it looks nice and people want to move into our area and bring more to our community.

I think there's a couple of questions, you know, about the things that you noted in your emergency action plan. You had talked about, you know, during the construction phase, high amounts of dust and things like that. So, again, just asking for a lot of mitigation around those things, you know, just from air quality perspectives.

In looking at some of the numbers that you had put into your document, it looks like there's quite a bit of different things that are going on during the time of construction, especially with a lot of traffic.

And I will say, too, I know -- again,
I appreciate the space and the time for you all in

setting up this platform to express our concerns as well.

The only thing I wanted to mention is, I wasn't -- I was wondering about the environmental assessment, when it's done, how do we get a copy of that? Is that something that will be mailed out to the neighbors so we can provide feedback at that time or where does that get saved?

MR. LOGAN HICKS: Yes. So that actually will be put on the record, on edockets, which, if you pick up the slides that we have presented over there, there's a link on there for edockets, and you just type in any of those -- 23-423, 24-238 -- or 283, and 23-425. Just put in any of those and it will be in that docket.

But if you would like to be on the mailing list, you can -- you can put your -- fill out that card there and leave it with either me or Cezar, and then you will be -- they will let you know when it's available so you can go and read it and, you know, take a look. And then once we have -- we'll have a public hearing so you guys can come together and say, hey, we like that you did this but you missed this. So you'll have a chance to comment again after the environmental assessment

is posted.

MS. JACLYN LITFIN: And I guess that was my next question. So what is the next couple of steps? You mentioned a couple of other public hearings. So is there a PCA public hearing or is it set here? Mr. Popp had mentioned some other processes, so how do we find out about those things so we can have that on our radar as well?

MR. CEZAR PANAIT: I can answer that. The Pollution Control Agency, they won't be on this project unless there is some type of risk to the water or air quality. So these projects are reviewed as part of the Public Utilities

Commission's review process, which is what we are doing here tonight, and also part of the comment period. And after the EA comes out, the people will have a chance to review that and -- and provide comments.

So there's a public hearing, which is another department meeting in August, members of the public will have an opportunity to again ask questions about the environmental review, about any other comments that they feel that they would like to bring up, and that will be before the judge. So the judge will take all into account, and the

1 Department of Commerce is required to provide 2 answers to any questions that pertain to any 3 shortcomings or any -- any deficiencies in the environmental -- in the EA, and then, as the case 4 5 may be, issue some supplemental pages to the environmental assessment or provide specific 6 answers to the -- to the -- to the people who ask. 7 MS. JACLYN LITFIN: But is there a 8 9 date set for that? 10 MR. CEZAR PANAIT: Right now we don't have a date. It will be sometime in August. 11 the Department will be doing all of this, so we 12 will be sending out at least a notice ten days out 13 a similar notice --14 15 MS. JACLYN LITFIN: Okay. MR. CEZAR PANAIT: -- on how to 16 17 participate and where -- where the meeting will 18 be -- will be held. MS. JACLYN LITFIN: Okay. And then 19 20 where --I guess -- I guess my other follow-up 21 question is, just from the comments from people 22 that are here now, has McFerrell (phonetic) thought 23 about the landscaping? I mean, it's not something that we've really been talking about. We've had a 24 25 couple of conversations. So is there any update on

that, where conversations have gone on around that for the neighborhood?

MR. ADAM GRACIA: Yeah. So we are developing a visual screening plan for the project.

Our -- you know, we'll work on the Benton County ordinance that deals within 10,000 feet of the panels, and then the ordinance requires either a berm, fence, or landscaping with some combination.

So the exact mitigation, we have not finalized that yet, but we are assessing that. And specifically for where your property is located, there will be screening there.

MS. JACLYN LITFIN: And kind of like we had mentioned, we don't expect that you're going to do the entire project, right, but at least that area. I'm hoping that you would even consider going above and beyond what the bare minimum is, because, again, if you consider my lifetime, just on my ride home today and I'm driving down 23 to get here straight from work, I'm going to be looking at those solar fields on both sides of the road and the pine trees that are about this tall and half of them dead, that's going to take 30 years before they cover any visual impact that it will have to me in my lifetime. So hopefully you

can also take that feedback as well and designate 1 2 some dollars from the requests from the neighbors 3 and the neighborhood, who will be your neighbors as 4 you develop the project. 5 So, again, as you said, you know, as you think about that environmental health, please 6 consider all those impacts to health, not just 7 those ones that we can see in some of the numbers 8 9 and sometimes we can't capture the numbers, and 10 please just do what's right for us in our neighborhood as well. 11 MR. LOGAN HICKS: 12 Does anybody else 13 have any comments or questions? MS. TAMARA SELL: You had mentioned 14 just now that there is going to be a notice sent 15 out ten days before the next hearing. 16 Is that --17 is that going to go out like ten days prior to when 18 it actually takes place? MR. CEZAR PANAIT: A minimum of ten 19 20 days. We try to get it out even before. 21 MS. TAMARA SELL: But it's seven to 22 ten business days, so we might not -- if you mail 23 it ten days before it's going to happen, we might 24 Is there another source that we can 25 find out when that date would be so we can just

1	kind of keep track?
2	MR. CEZAR PANAIT: Yes. Yes. So
3	besides besides mailing out the notice to the
4	landowners, besides mailing out the actual notice
5	of the hearing, we also post it on the same day as
6	the executive secretary signs it. We post it in
7	edockets.
8	So people are strongly invited to
9	go to go to edockets and you can see the latest,
10	including any notifications about the upcoming
11	meetings.
12	MS. TAMARA SELL: Okay. Perfect. And
13	will all of this be on that site too? Will all the
14	transcripts and video of this meeting tonight be on
15	there too or where do we find that?
16	MR. LOGAN HICKS: We will be posting
17	the transcripts on edockets as well, the court
18	reporter's transcript. There's no video. This is
19	not being recorded. She is just taking down the
20	written testimony.
21	MS. TAMARA SELL: Okay. Perfect.
22	Thank you.
23	MR. MICAH REVELL: And I'll just add
24	one procedural thing to what Cezar said. When
25	there's a notice that goes out with that, that

notice also provides notice about the meeting, the hearing that will take place. Those typically, although it's not required, they typically will go out 25 to 30 days before the meeting takes place.

So all of the subscriptions that Cezar mentioned will be in the month range prior to that hearing.

MR. LOGAN HICKS: All right. Any other comments, questions? Over there.

MS. RACHEL STUCKEY: Just one last -Rachel Stuckey again. I know it's one thing coming
from the department or the developer to get your
feedback and stuff, but just seeing a lot of these
go through and everything, like actually make sure
to share your feedback and concerns and everything
like that with your local county, because even
though the ultimate decision is with the Public
Utilities Commission, the local county does still
have a voice in it and they can negotiate with the
developer, and the PUC really wants to hear from
you too. So just make sure that you actually weigh
in. The public input is important.

MR. LOGAN HICKS: Did you get that?

Thank you. Like I said, if you don't have anything else to say tonight, you can always write something

down, e-mail it to me. Write it down over there on paper, e-mail it, leave it here. You know, there's plenty of ways to get your comments to me and, you know, I take all sorts so. I'm not seeing any more hands, so I think we're probably going to call it unless you guys have anything else. All right. Well, thank you guys very much for coming. We really appreciate your time. Look for that environmental assessment announcement and for the next hearing date. Thank you very much and drive safe. (Proceedings concluded at 7:34 p.m.)

MR. CEZAR PANAIT: Okay. So good evening, everyone. My name is Cezar Panait. I'm an engineer with the Public Utilities Commission in St. Paul, Minnesota, and we are meeting tonight on the application of Benton Solar, LLC, for a -- for three permits, actually, to construct and operate their Benton Solar project.

applied for. One is for the site permit for the solar facility, and that is filed in Docket GS-23-423. The other permit is for a site permit also for the energy storage system associated with the Benton Solar project, and that is the docket ESS-24-283. And there's also an associated short transmission line to serve both of these projects, and that has been filed for a route permit in Docket TL-23-425.

It is January 15th, 2025, and we had a similar meeting last night in Sauk Rapids,
Minnesota. The meeting was in person. This is a public information and environmental assessment scoping meeting. So the purpose of the meeting is twofold: To provide information about the permit review application that is being conducted by the Minnesota Public Utilities Commission. We also will

be hearing some detail specifications about the project and construction timeline from the applicant, Benton Solar, LLC, which is a subsidiary of NextEra Energy Resources. And then, lastly, we'll be hearing from my colleague from the Department of Commerce, Logan Hicks, and he will talk about the role that the Department plays in this permit review process.

Today's -- tonight's meeting agenda has only four points, and so I'll be talking about -- I already made the introduction, and I'll briefly talk more about the permit application review process that the Public Utilities Commission is conducting on these three applications.

There will be a description of the project by Benton Solar, LLC. The Department will talk about their roles, and the last thing will be taking questions and comments from members of the public. Questions about any topics that may pertain to the project, and, also, the important piece, seeking feedback from the members of the public and any agencies, local government units that may be participating, on the scope of the environmental assessment. And Logan will be leading that question and answer session hopefully.

So there are three government units that are being -- involved with this review, the review of the permit applications. First of all, so Benton Solar submitted three -- two applications: A joint site permit for the solar and for the storage system, and, separately, they submitted a route permit application for the transmission line.

The role of the Commission: The Commission manages the application review process, and issues site and route permits for large energy facilities in Minnesota, as delegated by the legislature in applicable statutes and administrative rules.

We also have the Department of Commerce participating, and the Department of Commerce, their staff will be preparing and conducting the environmental documents for the project. And in this case, that document is called an environmental assessment.

And later on, during next summer, we will have an Administrative Law Judge from the Office of Administrative Hearings, and that judge will be conducting a series of one public hearing in August in Sauk Rapids and, also, will be conducting the evidentiary hearing to further develop the record.

And following that public hearing, the judge will be compiling and writing a report titled Findings of Fact, Conclusions -- Fact, Conclusions of Law and Recommendations, and the judge will be submitting the report to the Commission. Which takes the report and uses the report, along with the complete record that will be developed by that time, to deliberate and make a decision on issuing or denying the permit applications that have been applied for.

So the proposed project is comprised of a 100-megawatt solar generating system, there will be 100-megawatt battery energy storage, and the entire project is proposed to be located on 632 acres of private land, out of a larger 951-acre project site located about six miles east of the city of St. Cloud, Minnesota, in Benton County.

The project will also include a project substation and interconnection facilities that would connect this project to the power grid through an existing Great River Energy power substation located in Benton County. And that transmission line is 115-kilovolt, and also -- and about a half-mile in length.

So I already mentioned about the permits

that were applied for. So the project qualifies, meets the definition of a large electric power generating plant, and requires a site permit for the solar site because the solar project is greater than 50 megawatts.

It also requires a site permit, a separate site permit, for the battery energy storage because the energy storage is greater than 10 megawatts as defined in the definition of large energy facilities as applicable to -- specifically to battery energy storage.

And the route permit, it will be required for the transmission line because the line will be operating at a voltage of more than 100 kilovolts, and the length of the line is greater than 1,500 feet in length.

It used to be that a project of this magnitude would also require a certificate of need, but the legislative law changed last year in the 2024 session, and renewable energy projects, such as solar or wind, are excluded from requiring the certificate of need.

So the Commission, after the entire year review process, the public review process, the Commission is tasked by the legislature, by the

applicable statute and rules, and, namely, the factors are here -- listed here on this slide are taken from Minnesota Rule 7850.4100. And these four bullet points are not -- the number one factor that the Commission is tasked to look at and consider is the potential human and environmental impacts of a project of this size.

For example, impacts could be associated with noise or aesthetics; or public health and safety and land-use conflicts; any cultural or historic resources present in the project area. But, also, whether the project affects, or not, the air and water quality, and also the impact on plants and wildlife.

Also, a consideration to look for suitable ways to minimize, mitigate, and avoid any identified impacts. Electrical system reliability as a net -- in totality for the region and for the State of Minnesota is also being considered by the Commission when making a determination whether to grant permits for energy facility projects such as this Benton Solar.

And not the least is the cost, the cost of the project, the cost of constructing; any jobs created during construction and operations; any

maintenance facilities that are required for the project; and how those costs are -- how much they add up to. Because, ultimately, the project will be paid by the electricity customers in the state or nearby states.

schedule for the remaining review process. So just reminding that the permit applications were submitted by the applicant last fall in September of 2024. And then the Commission, after we conducted the comment period, we took comments from members of the public and agencies about the completion of the permit applications. Because, by statute and by rules, the applications need to touch on a number of information, like the data points that the applicant is required to provide, and that's why the applications are quite extensive in printed format.

So the Commission met in an open agenda meeting, and they deemed the applications as complete in December -- on December 19th, and that was the starting point, that the review process actually begins when the applications are deemed complete by the Commission's written order.

So yesterday and today, we were meeting for the public information and scoping meetings.

Those are the second item on the -- in the table. The comment period associated with this -- with these two meetings will end on March [sic] 31st, 2025.

Following that, the Department will be issuing the scope of their environmental assessment, and then the environmental document sometime in July. And then we'll have -- we'll have at least three public hearings: An in-person one; a virtual, similar to this format; and also an evidentiary hearing in St. Paul, Minnesota.

Following the public hearings, the judge will be issuing a report in November of 2025. And within 60 days of that issuance of the report, the Commission will meet one more time in an open format meeting, and deliberate and decide on whether to issue the permits that are being requested by the applicant. And that will be roughly a year after the applications were completed -- deemed complete.

So I already mentioned about the comment period. That concludes on Friday, January 31st. Please try to provide your comments by that date. We would prefer by 4:30 p.m. And there are a couple of ways to provide comments. So one of the ways is to follow the web address listed -- and it also was

part of the notice for the meeting -- and provide comments directly to the Department of Commerce.

And Logan will be receiving those comments and organizing them and addressing each one of them.

You could also submit written comments by U.S. mail addressed to Logan Hicks at the Department of Commerce, and his address, work address, is listed here on the page.

In providing comments, please be mindful that the Commission is only interested to find out some of those impacts that we talked about earlier, about any potential human or environmental impacts that a project such as Benton Solar might have on the surrounding areas. Also, if you know of ways to avoid or mitigate or minimize those perceived or identified impacts. And, also, is there any unique characteristics that the project should be -- should be considering?

And the Commission is always mindful about comments received from members of the public and also from local government units. And in many instances, the Commission does include some special conditions, namely, to address those pertinent comments that are received during the review process.

So more information about the project:

The Department has a specific website to -- for
people to find out more details about this

project -- specific project. And, also, I would

like to remind that -- people that have a tendency
to want to know everything about the project, they
can certainly do that by looking up information
yourself on -- in eDockets, which is the

Commission's electronic filing system.

And once you go to that web address, which is MN.gov/PUC, then you select "eDockets."

And then you enter the docket numbers: 23-423, or you could enter 23- -- 24-238 for the storage and 23-425 for the transmission line.

You could also add your name to a mailing list subscribing to this document in particular, to any of these three documents, and you could receive e-mail notifications every time a new document has been eFiled. You'll go into the eDockets and find out what that document that just arrived is about.

So the state agency contacts: So the environmental review analyst from the Department is Logan Hicks, and he will be introducing himself. I am a facilities planner with the Minnesota Public Utilities Commission. And also we have a designated

public advisor, Jacques Harvieux. He could not be here tonight, but he is the public advisor tasked with being able to help out any member of the public or anybody that has a question about the process, how to participate, when is the comment period ending, when is the next opportunity to participate in the public meeting about this project, and any questions about the process and procedure. At this point, I think we are at the point to hand it over to the applicant, Benton Solar, LLC, represented by people from NextEra Energy Resources. So Adam or Micah, please go ahead. MR. MICAH REVEL: Thank you, Cezar. Can you hear us alright? MR. CEZAR PANAIT: Yes, I can. MR. MICAH REVEL: Great. Okay. Well, thanks. Good evening, everyone. My name is Micah Revel. I am an attorney at the Stinson law firm here in Minneapolis, and I serve as outside permitting counsel to NextEra Energy Resources and to Benton Solar, LLC, which is the

members of the Benton Solar team, a lot of

applicant in this proceeding. I am surrounded by

subject-matter experts that are here and available

to answer specific questions.

Adam Gracia is the project developer and the lead on this. He's going to be presenting on the specifics of the project, so I'll turn it over to him.

MR. ADAM GRACIA: Thanks, Micah.

As Micah mentioned, my name is Adam

Gracia. I'm a senior project manager with NextEra

Energy Resources and the developer for the Benton

Solar project.

So tonight we want to give you a quick overview of who we are as a company, and then an overview of the project, which will include the project timeline, some of the benefits of the project. I'll show you a site plan for the solar and battery storage site, as well as the transmission line.

And then we'll dive into some project specifics for the solar project, the transmission line, and the energy storage system. And then last, but not least, we'll cover some stakeholder outreach that we've done for the project.

So Benton Solar, LLC, is wholly-owned indirect subsidiary of the NextEra Energy Resources, or NEER. NEER is the largest generator of renewable

energy from the wind and the sun. We're also an industry leader in battery storage. So NextEra Energy has constructed -- or developed and constructed over 40 co-located solar and storage projects, ranging from 60 megawatt hours to over 900 megawatt hours. And, again, this project is comprised of a solar generating facility, a battery energy storage system, and a transmission line.

So this project is located entirely in Benton County, Minnesota, specifically in Minden Township, and includes the three components that we talked about. So the solar generating facilities will generate 100 megawatts of clean, renewable energy. The energy storage system will -- it's a 100-megawatt, four-hour energy storage system. Said differently, it can store 400 megawatt hours of clean, renewable energy generated by the solar system, as well as from the grid.

Both the solar facilities and the battery energy storage facilities will share a half-mile 115-kilovolt transmission line that connects our facilities to the GRE Benton County substation. Our transmission line is located entirely on private easements, and we will not be utilizing any public right-of-way for the transmission line.

Here is a brief overview of the project timeline. So we submitted our application on September 20th, 2024. December 19th, it was deemed complete. Our next major step in the development process as we go through permitting is to procure our major equipment, which will happen in the third quarter of this year.

By the end of the year, we anticipate having a decision from the Public Utilities

Commission on the project, which would then lead to starting construction in the second quarter of 2026.

It's about a 14-month construction period with a winter break, so we would be operational by the end of the year 2027.

So there are a wide range of benefits associated with this project. It is a significant capital investment in Benton County. So the solar and storage projects are over a \$300 million investment in the county. During the construction period that I mentioned in 2026, 2027, there'll be between 150 and 300 construction job opportunities. There will also be two to three full-time operations jobs to maintain and operate the site. So they'll be full-time NextEra Energy Resources employees. There'll be increased businesses during the --

increased local business during the construction period, as well as annual ongoing compensation for the participating landowners.

Some other community-wide benefits will come from the annual production tax that the -- that Benton Solar, LLC, will pay to Benton County and to Minden Township. So we anticipate approximately \$200,000 per year to Benton County and \$50,000 per year to Minden Township.

Battery storage projects provide great stability and reliability. We'll go a little bit more into that on some later slides. And, then, we also want to -- over the past couple years, we've been contributing to local organizations, and that's something we want to continue to do throughout the entire life of the project.

So here's our preliminary site plan. So on the left is the solar and battery storage facilities. The battery energy storage facilities are the orange box to the southwest of the project. On the right side of the slide is the preliminary design for our transmission line. So, again, that is a half-mile transmission line from our project's collector substation to Great River Energy's Benton County substation.

So the Benton Solar project will generate up to 100 megawatts of clean, renewable energy. The site will utilize approximately 600 acres for the photovoltaic panels, access roads, and the collector substation. We'll be using a tracking technology for the solar panels, meaning that the direction that the panels face throughout the day will shift to track the sun and increase the efficiency of the project.

and are connected via underground buried medium-voltage collection lines of 34.5 kilovolts. These lines serve to carry all the power generated from the panels to our collector substation. At the collector substation, the power is stepped up to 115 kilovolts, and then transmitted via our transmission line to the Benton County substation.

So the battery energy storage has a wide range of benefits. So it helps optimize the way the power grid delivers electricity to the customers; it can smooth out fluctuations in frequency and voltage; reduces energy losses and waste, both for this project and for the grid as a whole.

It also avoids the need for some major system upgrades, which could include larger

transmission projects, and it extends the hours that our renewable energy project can operate. So the solar system can charge the battery while the sun is up, and then the battery can discharge that clean, renewable energy to the grid after the sun goes down.

So like I mentioned, the battery energy storage facility, it delivers power when it's needed. The general construction is, it has -- contains small battery cells that are assembled into racks, and all those racks are filled into battery containers. So this project will have approximately 176 battery containers for 100-megawatt four-hour storage system.

So, yeah, it can store energy during low energy demand periods, which we can charge the battery and then discharge the battery when energy demand is higher. Again, this works really well with our solar facility.

And this is also a long-term investment. So we anticipate the life of the battery project to be up to 25 years.

So safety is a big part of what goes into the design and construction of these systems. So we'll incorporate the latest National Fire

Protection Association and Underwriters Laboratory standards. These are new codes and standards that address fire risks and mitigation, including, you know, setbacks and detection, and our first responder orientation and site-specific safety plans.

So we've completed our first responder orientation, coordinated that with the Benton County emergency management department last year. Which, basically, gave an overview of the battery storage system, the general overview of the fire safety that goes with it, and then that will be followed up with a site-specific safety plan after construction.

We also have a remote monitoring system in place. So we have a remote operations control center, which provides 24/7 monitoring for all of our sites nationwide. This can detect any change in operation of a single cell within a battery storage system and alert our operators as necessary.

So safety is our number one priority.

Safety of employees, neighbors, and the public are always top of mind. So, again, that starts with the industry testing prior to them procuring the equipment, the safety systems that we put in place during construction and operation, the 24/7

detection that I talked about -- detection and monitoring, and then, again, that ongoing engagement with first responders.

So the solar -- solar system and the battery storage system will connect to the grid via a half-mile 115-kilovolt transmission line. Again, this is all on private easements, utilizing approximately seven single-circuit monopole structures. The actual height and pole placement will vary based on the terrain and the span lengths that we have, but we do not expect any of our structures to exceed 110 feet above the ground line.

Last, but not least, this is an overview of some of the stakeholder outreach that we've done to date. Our folks have been advising, educating, and consulting with landowners in the greater community. You know, again, this is some, but not all, of the outreach we've done.

We're also partners with the Benton

Economic Partnership, part of the Foley Chamber of

Commerce, and have been members of those

organizations for a numbers of years. We also

hosted an open house for the community back in

August prior to submitting our application. We

mailed invites to everyone within a two-mile radius

of the project.

so Benton Solar looks forward to working with, you know, all the local stakeholders, everyone in the community to develop this project, which, again, will bring a suite of benefits to the community. So it's an over \$300 million capital investment in Benton County and Minden Township. There's significant economic benefits to the landowners, the small businesses, and the community as a whole through our solar production tax. There are environmental benefits of adding 100 megawatts of clean energy to the grid. It helps the State achieve their carbon-free goals by 2040.

And, again, that continued community engagement and support. So we hope to be a part of the community not only through the development and permitting of this project, but through the entire construction and life -- operational life of the project.

And here's my contact information. We have a website for the project. The BentonSolar@NextEraEnergy.com e-mail will go to me, and it also has my own e-mail and my own cellphone number. So please reach out if you have any questions about the project or would like an update.

1	Thank you.
2	MR. CEZAR PANAIT: Thank you, Micah and
3	Adam.
4	Now, we'll pass it on to Logan.
5	MR. LOGAN HICKS: First off, I just
6	(Audio connection lost.)
7	MR. CEZAR PANAIT: We can't hear you. We
8	just heard you briefly for a second. You are
9	unmuted from my end, so you should be able to speak.
10	MR. LOGAN HICKS: Can you hear me now?
11	MR. CEZAR PANAIT: Now, yes, I can.
12	MR. LOGAN HICKS: Okay. Sorry. I had to
13	switch my microphone. Apparently the one was not
14	working. Apologies. Thanks for
15	MR. CEZAR PANAIT: Right.
16	MR. LOGAN HICKS: dealing with that.
17	Yeah. So I just wanted to thank everyone
18	for showing up on the call tonight. Input from the
19	public is very important for me to get my job done
20	correctly and, you know, efficiently. So, you know,
21	I thank everyone who shows up and anyone who will be
22	commenting on the scope of the environmental
23	assessment, which I'll be going through.
24	Next slide, Cezar, please.
25	So tonight I'm just going to go over some

real quick items. First, I'm just going to, kind of, give you a background about the Department of Commerce, who I work for. I work for the Energy Environmental Review and Analysis Unit, and that's -- our entire idea -- our entire team is tasked with creating an environmental review document, which I will also go over.

We'll also cover how to comment and why it's important, and then we'll get into question and comments. We'll open it up to you folks, the public, to -- you know, if you'd like to -- have any oral comments or, you know, questions to ask of Nextera or us.

So I work with the Department of

Commerce. We are tasked by the Public Utilities

Commission -- who Cezar works for -- to create an

environmental assessment, which is a review document

that covers the project, and it's in regard to the

area in which it's being built.

Some of the things that we like to cover in the EA are types of human and environmental impacts. You know, so socioeconomics for humans or like, you know, water quality for environmental impacts. We like to look at strategies that can help avoid, minimize, or mitigate any of these

potential impacts.

And the idea with this environmental assessment is that we are coming at it as a third party. So we're not with the Minnesota Public Utilities Commission and we're not with NextEra. This is a pure third-party unbiased document that we are creating that is designed to be a decision -- to inform the PUC when they decide if this project will be green-lit or not.

so the reason that we are at the meeting -- we're having this meeting today, besides public information, is mostly to get public input. So that is you folks who may live in the area, who know the area better than we do, and it's nice for you guys to let us know what you think is most important when we're looking at an environmental assessment.

Now, an environmental assessment has a standard rubric of different things that we do look at. However, it's kind of a wide net, and we're looking for more of a focused approach from, you know, input from you guys. You guys are the ones that know what's going on best in the area. So we'd like to get your input to know what we'd like to focus and look at during -- while we're creating

1 this environmental assessment. 2 Some things that you guys can talk about 3 are, like, different environmental impacts that you'd like to see, you know, really focused on, 4 5 Like whether it's aesthetics or, you know, a socioeconomic issue, let us know, and we could 6 really focus in on that on our environmental 7 8 assessment. 9 You know, there's -- there's other things 10 that you can talk about, like unique characteristics of the project area. Say there's something 11 on the -- like, that you know, like, a creek runs 12 through here, but we don't see it on the map, let us 13 know, and then we can definitely get that inputted 14 15 and, you know, analyzed. So the draft scoping document will become 16 available -- the draft EA will become available in 17 18 July. Was that correct, Cezar, I believe? 19 20 MR. CEZAR PANAIT: The draft itself, I 21 believe, it's March. 22 MR. LOGAN HICKS: Oh, no, the scoping 23 decision's in March. MR. CEZAR PANAIT: And the actual 24 25 document is July, yes, you are right.

MR. LOGAN HICKS: Thank you.

So yeah, July, the environment assessment will come out, and with that, we will have another meeting. Which you guys can come forward, let us know, say, we saw that you put this in there, but, you know, we really want you to investigate it further. And then we can take a look at that and, you know, get that handled and analyzed.

So this isn't the first -- so this is just the first of the meetings that you guys will have to let us know what you're feeling, but there will be more time for you guys to also, you know, comment and ask any questions as well.

Next slide.

So with this, there's also a transmission line, and with transmission lines, we do -- we take route alternative suggestions from the public as well. However, they have to meet a certain list of criteria. So number one being you have to submit the suggestion on time. Cezar mentioned January 31st is the deadline for comments and suggestions and things like that. So this route alternative must be turned in before the 31st.

It needs to meet the needs of the project, and it needs to be feasible. So the idea

is that -- and, also, it needs to describe an impact and the mitigation for that impact as well. So, say, you know, you -- there's a line going through your backyard and you don't like it there, you can't just say, I don't like it there. Because then it goes to someone else's backyard, it doesn't really mitigate any sort of impact.

But say, hey, it's going, you know, through some trees. I don't like it, but I don't want those trees to be cut down, then you can do that. Now, granted, I don't know if this line is actually going through trees, but that's just an example for a way to mitigate an impact for a route alternative suggestion.

Next slide there, Cezar, please.

Okay. So there's multiple ways to comment. As Cezar mentioned, on one slide there was a website. I have an e-mail address. I also have a mailing address, however you want to get it to me. But at the end of this presentation here, we will have time for the public to make any oral comments so you can get it on record and you can talk about it.

So, once again, my mailing address and e-mail address are right there. Please make sure

you have your comments in by the 31st, you know, just so we can give them time -- like, everything timely put together and put into the record so we can, you know, move the process along.

All right. So some quick commenting etiquette. So one speaker at a time, that will be pretty easy because I'll be the one to mute you or unmute you as needed to. So when you first start speaking, please state and spell your name since we have a court reporter here, Christine, who is taking the -- taking the written statements for the record.

So I would also like you to just please limit your comments to a few minutes. If you have more to say, you can -- you can absolutely come back again. We just want to make sure that everyone has a chance to get through with anything they had to say. Once everyone has gotten through, if you want to come back on and speak more, feel free to so.

Another important thing to do is maintain respect for others. No name calling, no jabbing -- taking jabs at anyone. You know, we're trying to keep it nice and polite. And please make sure you try to direct your comments and/or questions to the scope of the environmental assessment. You know, we're not trying to, you know, go on different

1 tangents here. We're trying to keep it nice and 2 concise and as on-topic as we can, please. So with that, next slide, Cezar. 3 And there should be one more there. 4 5 Oh, yeah, so right there it says the circle chat button is open. However, if you would 6 just like to use your raise-hand option, that also 7 Then, I'll be able to unmute you, and 8 9 anybody who would like to ask any questions, the 10 floor is open. Feel free to raise your hand or, you know, shoot something in the chat button, and I will 11 unmute you and then you can have your say. 12 MS. AMANDA OTHOUDT: 13 MR. LOGAN HICKS: Yes. 14 15 MS. AMANDA OTHOUDT: Amanda Othoudt, O --Amanda, A-M-A-N-D-A, O-T-H-O-U-D-T. I'm with Benton 16 17 Economic Partnership. I just have a few questions 18 for you. Can you lay out what that remediation plan So after the lease, after the project is 19 20 complete and the lease is done, can you talk a 21 little bit about the remediation plan that you have in place, or if you have one in place? 22 23 MR. LOGAN HICKS: Yeah. I'll let NextEra I guess, the decommissioning plan is 24 answer that. 25 what you're alluding to there, Amanda?

1 MS. AMANDA OTHOUDT: Yes. 2 MR. LOGAN HICKS: Yes, okay. I'll let 3 them answer that. MS. AMANDA OTHOUDT: 4 Thank you. 5 MR. ADAM GRACIA: Thanks for the question, Amanda. Yes, so we have a decommissioning 6 plan included in our application. You know, at a 7 high level, the goal of the decommissioning plan is 8 to restore the site to the conditions that it were 9 before we came and put the infrastructure in place. 10 So we're removing all the solar panels, 11 foundations up to four feet, and then recycling or 12 refurbishing and reusing those panels at an 13 alternate site. So overall, though, the scope of 14 the decommissioning plan covers, you know, how we're 15 going to remove and restore the land to what it was 16 17 before. 18 And I -- on top of that, we also will enter into a bond or surety with Benton County. 19 20 Which will, essentially, you know, provide a 21 monetary bond that -- for whatever reason, if 22 NextEra can't follow through on the -- or does not 23 follow through on the decommissioning plan, the county is -- has a monetary bond in order to remove 24 So -- and that is reevaluated 25 the infrastructure.

every five years. So it adjusts for inflation and 1 2 changes in the price of the decommissioning. 3 MS. AMANDA OTHOUDT: Great. Thank you so much. 4 MR. LOGAN HICKS: All right. 5 Is there anybody else that has any questions, comments? 6 7 Let's see, I've got one in the chat here. It says it's from "LRusin," L-R-U-S-I-N: 8 There was a lot of information on the benefits slash pros 9 financially of the project. Could you please talk 10 about the cons or negatives of the project, 11 particularly to the homeowners and landowners 12 surrounding it? 13 MR. ADAM GRACIA: Yeah. So thank you for 14 15 the question. So one of the things that we definitely take into account is the visual impact of 16 17 the site. So for residences within 1,000 feet of 18 the project, we are developing a visual screening plan in accordance with the Benton County ordinance 19 for their community solar gardens. 20 21 So we are using that to develop a 22 screening plan to minimize the impact for 23 surrounding residences and homes outside of the project boundary. That screening plan will include 24 25 either fences, berms, or landscaping, or some

1	combination of the three. We're still developing
2	the specifics of that plan, but that is the
3	intention to minimize that impact on the community.
4	MR. LOGAN HICKS: Adam, thank you.
5	Anybody else have any questions,
6	comments?
7	MS. AMANDA OTHOUDT: I have a couple
8	other ones, but I'll I mean, I can let other
9	people go, too, if you want.
10	MR. LOGAN HICKS: Yeah. Go for it
11	Amanda, please.
12	MS. AMANDA OTHOUDT: Okay. So another
13	question I had, and I don't know if it's been
14	addressed, but so can you talk to a little bit
15	about the surrounding fire stations and your
16	communication with them?
17	Do they are they equipped with the
18	correct fire equipment, dry chemicals, whatever they
19	need, or other specialized extinguishing agents to,
20	kind of, control any lithium battery fires that
21	could potentially happen over the next few years or
22	whatever? Can you talk to that a little bit?
23	MR. ADAM GRACIA: Yeah, absolutely. So
24	for the first part of your question in terms of our,
25	you know, specific engagement, so like I said, last

year we coordinated with the Benton County emergency management department to set up a meeting with representatives from local fire departments. So that was -- sorry, the Foley Fire Department and the Sauk Rapids Fire Department had a representative there. We talked through the overall -- just an overview of the battery storage facility as a whole to, kind of, introduce the technology.

And then in terms of, you know, how that emergency action plan is developed and the safety precautions in place down the road, I'll turn it over to our battery safety expert, Josh Adams.

MR. JOSH ADAMS: Hi. Yeah, Josh Adams here. So as far as making sure that they've got the right equipment, the approach when -- in the rare occurrence of a thermal event is to maintain the safety of personnel. So we actually specifically advise against the fire departments taking any active suppression approaches, and to basically set up a perimeter. Take a perimeter approach, prevent any spread to any neighboring areas, and to keep their personnel safe.

These systems are designed and go through rigorous, varying levels of safety testing to demonstrate and prove that in the event of a thermal

runaway that you won't have any propagation or spread to any of the neighboring containers. So -- and all of our systems are tested and proven to do that. So the approach is safety and allowing the fire to terminate itself, so there's no special equipment required.

MS. AMANDA OTHOUDT: Thank you.

MR. LOGAN HICKS: All right. Thank you.

We have another question in the chat from "LRusin" again. I hope I'm saying that correct. If not, I do apologize. They ask: Can you touch on the impact to property value surrounding the solar panel fields?

MR. ADAM GRACIA: Yes, absolutely. So in our application in Appendix H, we have a market impact analysis that we conducted. So that looks at solar projects across the country. It also specifically dove into properties in Minnesota, Iowa, and Wisconsin that are near solar projects. So it evaluated proximity to the solar project, and it used similar properties and houses and -- that you would see with this project. And their result was that there was no correlation between property value and proximity to a solar project.

MR. LOGAN HICKS: All right. Thank you.

1	Anybody else?
2	Amanda, you said you had a couple more
3	questions. Did you have anything else as well?
4	Does anybody have any
5	MS. AMANDA OTHOUDT: I do.
6	MR. LOGAN HICKS: questions they would
7	like to bring forward?
8	MS. AMANDA OTHOUDT: I have one more
9	question, and it relates to just the construction of
10	the project. Are you hiring local companies?
11	MR. ADAM GRACIA: Yeah. So our intent
12	for this project is to use local union labor. We're
13	in the process of getting a general contractor for
14	the project. But, yes, we will specify they will
15	use local union labor for it.
16	MS. AMANDA OTHOUDT: Thank you.
17	MR. LOGAN HICKS: Thank you.
18	All right. Anybody else? Any more
19	questions, comments towards the environmental
20	assessment, scoping, anything of the sort?
21	Yeah. And as I said before, you know,
22	this isn't the only time you get a chance to make a
23	comment. As I said, e-mail me, go to that website
24	that we had posted earlier, mail me a letter,
25	anything you would like, and it will get into the

it will get into the record, and it will be put in front of the Public Utilities Commission. They'll read it. So, you know, everybody's voice does count. So, please, anything that you would like to put forward, feel free to do so.

I am still not seeing anything. I don't know, Cezar, how long you would like to give it before we call it, but I'll let you decide that one.

MR. CEZAR PANAIT: Yes. Just scanning through the participants list here, I don't see any other hands raised; and a quick scan of the chat function, no new comments received.

something that comes up and you just missed the opportunity to ask your question, please go ahead and send us a written comment. And send them -- address the comments to Logan, as we assume most of the comments are going to be related to the scope of the environmental document.

And if you have questions about the process, please go ahead and then reach out to me at the Public Utilities Commission. And we'll help you out in terms of being able to participate in the review process.

So with that, scanning one last time the

list of participants, no new -- no hands are raised and, also, no additional chat questions. So I've got 5 -- 6:49 p.m., and with that, I think we can call the meeting. And we want to say thank you very much for taking time out of your evening to participate in our public information and scoping meeting, and we are adjourned. Thank you, everybody. good evening. (Public comment concluded.)
