Schedule

I. INTRODUCTION

Q. PLEASE STATE YOUR NAME AND OCCUPATION.

A. My name is R. Evan Inglis. I am an actuary and investment professional employed by Pension Benefit Guaranty Corporation and I work as an independent consultant where I use my experience as an actuary and investment expert to help manage risk based on specific investment objectives such as paying pensions and securing retirement spending. I work to develop solutions for the benefit of my clients and I look for ways to contribute to improve practice in the actuarial and investment professions. I also write white papers and articles, as well as speak publicly about pension plans, pension risk, and investment strategies.

Q. PLEASE SUMMARIZE YOUR QUALIFICATIONS AND EXPERIENCE.

A. I am a Fellow of the Society of Actuaries (FSA) and a Chartered Financial Analyst (CFA Charterholder). I attained my FSA designation in 1990 and became a CFA Charterholder in 2011. I have over 30 years of experience working with pension plan sponsors on issues such as liability and cost measurement, plan design, pension accounting, funding strategies, and investment strategies. Included in my work experience, I have:

- educated thousands of pension and investment professionals about pension investment strategies through webcasts and presentations at conferences, in-person meetings, and phone conversations;
- designed, implemented and monitored investment strategies for dozens of pension funds;
- discussed and recommended strategies with professionals representing dozens of additional pension funds;

- written white papers on subjects such as management of pension risk, effects of the demographic profile of a pension plan population on the investment strategy, investment glidepath de-risking strategies, immunization investment strategies, investment strategies for terminating pension plans, and investment strategies for cash balance pension plans;
- spoken publicly on the previously mentioned topics, as well as topics such as evaluating the success of liability-driven investment strategies, stochastic modeling of pension risk, pension investment strategies in a low interest rate environment, pension investment risk from a corporate finance perspective, and risk-based frameworks for decision-making about pension plan investments and plan design;
- testified before the ERISA Advisory Council on the employer's perspective in pension de-risking trends;
- testified for the Government Accounting Standards Board on accounting standards for government pension plans;
- worked with some of the world's largest pension plans and advised the sponsors of those plans about pension risk; and
- been retained by the World Bank and other organizations to assist with matters related to pensions, investments, and retirement systems in developing countries such as Costa Rica, India, and Indonesia.

I have recently been a member of the Board of Directors of the Society of Actuaries (SOA) and the Board liaison to the SOA's Investment Section Council, which directs research and education on investments for the actuarial profession. In 2014 I established a continuing education committee for the SOA's Investment Section and chaired that committee for two years. I have

been a member of the American Academy of Actuaries (AAA) Public Interest Committee and a regular contributer to issue briefs on public policy issues related to pensions for the AAA. I have been the chairperson for the Pension Finance Task Force jointly sponsored by the SOA and AAA. In the past, I have been elected to the SOA's Pension Section Council and appointed to the AAA's Pension Practice Council. My resume is attached as Exhibit___(REI-1), Schedule 1.

Q. ON WHOSE BEHALF ARE YOU TESTIFYING IN THIS PROCEEDING?

A. I am testifying on behalf of Northern States Power Company - Minnesota (NSPM or Company).

Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?

A. The purpose of my testimony is to provide an independent, third-party opinion regarding whether the investment strategies and target asset allocations for the Company's pension funds are reasonable, based on the demographics of the Company's workforce and other relevant factors.

Q. HAVE YOU PREVIOUSLY PROVIDED TESTIMONY REGARDING THE INVESTMENT STRATEGIES FOR AND TARGET ASSET ALLOCATIONS IN THE COMPANY'S PENSION FUNDS?

A. Yes. In the Company's 2013 rate case, the Minnesota Public Utilities Commission (Commission) issued an Order Point that required the Company to address the reasonableness of its target asset allocations in the Company's next rate case. More specifically, in Docket No. E002/GR-13-868, the Commission issued the following Order Point that is relevant to my testimony:

11. In the initial filing of its next electric rate case, the Company shall:

a. Address why the target asset allocations for its pension fund are reasonable, including ages of retirees and employees. The Company must provide an update to its existing Exhibit 31 (Tyson Rebuttal), Schedule 1 and expand it to include this demographic information.

b. Provide testimony on its investment strategies and target asset allocations for the qualified pension fund and the justifications for these decisions, for the period from 2007 to the date of its next filing.

I provided testimony on these topics in the Company's 2015 rate case, and, while this specific requirement may no longer apply, the Company again asked me to review its target asset allocations and provide an opinion regarding whether those allocations are reasonable. The Company also asked me to review its investment strategies and determine whether they are reasonable.

Q. DID THE COMPANY PROVIDE YOU WITH INFORMATION BY WHICH TO ASSESS THE REASONABLENESS OF THE TARGET ASSET ALLOCATIONS?

A. Yes. The Company provided me with the following information to help me analyze the reasonableness of the Company's target asset allocations:

- Investment policy statements (IPS), as they were amended from time to time.
- Funded status and changes in both the Company's pension assets and pension liability (which is sometimes referred to as the pension benefit obligation, or PBO) on an accounting basis for 2007 – 2018.
- A breakdown of the pension plan liability according to benefit formula.

- Materials, including presentations by the investment consultant and minutes from several investment committee meetings, over the period 2007 – 2018.
- Information on the assets used for interest rate hedging in the Immunization Portfolio.
- Demographic information, such as counts, average age, and average service for the active, terminated, and retired participants in the Xcel Energy Pension Plan (XEPP).
- The Summary Plan Description (SPD) for the XEPP.

I also reviewed research reports from Willis Towers Watson with information about the asset allocation and investment returns for corporate pension plans in the U.S.

In addition to reviewing the materials, I was given the opportunity to speak with Company representatives regarding the current and prior investment strategies and the target asset allocations.

Q. PLEASE SUMMARIZE YOUR TESTIMONY.

A. I have considered the Company's investment strategy and asset allocation, based on the materials provided, and I found the stated strategy and asset allocation to be reasonable over the relevant time period. The strategy demonstrates key best practices, such as an understanding of how to measure investment risk relative to the pension liability and the significance of funded status on the desired level of risk. The basic approach is similar to that of other large pension funds throughout the relevant time period.

I analyzed the Company's target asset allocation as of the end of 2018 and the changes to the target asset allocation since the beginning of 2015. I have considered several key factors that should influence the asset allocation of any pension plan:

- plan liability characteristics,
- demographic profile of the participants,
- status of the plan (open, closed, or frozen),
- size of the plan relative to the size of the plan sponsor's business, and
- funded status of the plan.

As with my analysis for the Company's 2015 rate case, I found that the Company's asset allocation is reasonable and that the Company's approach to determining asset allocation reflects current best practices.

II. INVESTMENT STRATEGIES

Q. WHAT TOPIC DO YOU DISCUSS IN THIS SECTION OF YOUR TESTIMONY?

A. I describe the Company's current investment strategy for its pension funds and provide my opinion on the reasonableness of that strategy. I also address the reasonableness of the Company's investment strategies and the changes in those strategies from 2015 to the present.

Q. HAS THE COMPANY OUTLINED ITS INVESTMENT STRATEGY IN ANY DOCUMENTS THAT YOU HAVE REVIEWED?

A. Yes, a fairly complete picture of the investment strategy can be derived from the documents I listed earlier.

Q. WHAT FACTORS SHOULD THE COMPANY CONSIDER WHEN DECIDING WHAT ITS INVESTMENT STRATEGY SHOULD BE?

A. The investment strategy should define risk in the right way relative to the pension liability and identify tools that are useful to manage risk to a level that is appropriate for pension fund stakeholders. The return objectives should be consistent with the level of risk determined. Some of the key factors to consider include:

- the fiduciary duty to secure benefits promised to the participants,
- the risk that funding requirements will be uncertain or volatile, thereby disrupting the plan sponsor's business, and
- the perspective that the plan sponsor's shareholders or other financial stakeholders, such as customers, might have on pension risk and investment returns.

Q. CAN YOU DESCRIBE HOW THE XEPP INVESMTENT PORTFOLIO IS GENERALLY STRUCTURED?

A. Yes. The XEPP investment portfolio is part of a larger portfolio for a master trust that covers four plans. The portfolio for each plan is organized into three primary sub-portfolios:

(i) a Growth Portfolio, where specific asset classes are intended to achieve higher returns by taking more risk and through the impact of broad-based U.S. and international economic growth;

(ii) an Immunization Portfolio, where specific asset classes are intended to change in value in a manner similar to the projected pension liability as interest rates change in order to stabilize and protect the funded status of the plan; and

(iii) a Liquidity Portfolio, where specific assets are designed to provide a cash reserve with a stable value to fund monthly cash benefit payments.

Q. WHAT IS THE COMPANY'S CURRENT INVESTMENT STRATEGY, AS YOU UNDERSTAND IT?

A. At a high level, the Company uses a long-term investment horizon and evaluates risk in an asset-liability framework in which the change in the value of assets relative to the value of the liability is more important than the change in value of the assets alone. In other words, changes in the pension plan's funded status (assets – liabilities) are the measure by which results and risk are measured. The strategy uses "interest rate hedging" where the value of some assets changes in the same way as the value of the liability when interest rates change as a way to stabilize the funded status. The level of interest rate hedging is referred to as the "hedge ratio" which would be 100 percent if the assets reacted to interest rates exactly like the liability does.

The strategy also targets relatively high returns with a significant allocation to riskier growth assets. While it is challenging, a successful strategy would, over time, grow the assets faster than the pension liability but would also keep contributions relatively stable and predictable. The strategy is dynamic and designed so that seeking returns and reducing risk can be balanced and controlled. Both the level of interest rates and funded status are used as key factors in determining how much risk to take.

Q. WHAT TOOLS DOES THE COMPANY RELY ON TO IMPLEMENT THAT STRATEGY?

A. The Company pursues its dual goal of pursuing growth while mitigating risk relative to the liability by allocating its investments between the Growth

Portfolio, the Immunization Portolio, and the Liquidity Portfolio as described above. The Growth portfolio is relatively large and very diversified and has been adjusted in recent years based on market conditions for the various asset classes. While the Company does not formally incorporate funded status into its strategy through a stated "glidepath" to determine the portfolio allocations to Growth and Immunization, funded status is still used as a key factor for this determination. The Company adjusts the level of interest of rate hedging based on interest rate "triggers" where the level of interest rate hedging is increased when interest rates rise to certain levels. The Company uses some of the top pension expertise available from Goldman Sachs Asset Management (GSAM) to advise on and implement their strategy.

Q. DO YOU CONSIDER IT APPROPRIATE FOR THE COMPANY TO RELY ON PENSION ADVISORS SUCH AS GOLDMAN SACHS ASSET MANAGEMENT?

A. Yes. Managing a pension fund is complex and requires information, resources, and expertise that is not directly available to the Company without hiring an advisor. Rankings and analysis of investment managers, ALM (asset-liability modeling) tools and actuarial expertise are some of the main resources that the Company is able to access by using an advisor. In addition, an advisor evaluates a wide variety of pension fund managers and can assess whether, they and their strategy(ies), are appropriate for any particular pension plan.

Q. BASED UPON YOUR EXPERIENCE AND EXPERTISE, IS THE COMPANY'S CURRENT INVESTMENT STRATEGY REASONABLE?

A. Yes. In my opinion, the strategy is reasonable because both pension plan participants and the financial stakeholders of the Company are well-served by

a balanced approach to seeking returns and reducing risk. The balanced approach is also dynamic such that the balance between seeking returns is adjusted based on key factors as described above. The relatively large allocation to growth assets is appropriate for and more common for plans that are still open to new participants. Using funded status, and asset returns relative to pension liability growth to understand risk and measure results is the appropriate approach for a pension plan. Other managers of large pension funds use similar strategies.

Q. HAS THE COMPANY'S INVESTMENT STRATEGY FOR ITS PENSION PLAN CHANGED OVER TIME?

A. Yes, but not significantly. It would be more appropriate to say that the same strategy has been in place since the market turmoil in late 2008, but has evolved and been adjusted as market conditions have changed. The overall strategy has been defined by a long-term, diversified approach to seeking returns, with risk measured by changes in funded status, using specific allocations to growth assets and hedging assets. After 2008, the separate Growth and Immunization portfolios were created to be more explicit about the portfolio objectives and the balance between risk and return.

In addition, separate portfolios were developed for each of the four pension plans, allowing the balance between risk and return to more accurately reflect the plan provisions, demographics of the plan population, funded status and other factors. This has not changed. The overall target level of risk has been adjusted from time to time as has the approach to seeking returns. In addition, the explicit interest rate "triggers" were introduced in 2016.

Q. DO YOU CONSIDER THE COMPANY'S INVESTMENT STRATEGIES DURING THE PERIOD 2015 – 2018 TO BE REASONABLE?

A. Yes. The Company's investment strategy has been reasonable considering the economic environment and typical practices of pension fund investment managers during this period. The overall approach of using separate portofolios for growth and interest rate hedging is common practice. The allocation between those portfolios is similar to other pension plans and is reasonable given the interest rate sensitivity of the plan, the funded status of the plan, and the fact that it is still open to new participants. A set of interest rate triggers has been added, as described above, and this is a common approach to adjusting the level of interest rate hedging by pension plans.

Q. HAVE YOU EVALUATED THE REASONABLENESS OF THE COMPANY'S PRIOR INVESTMENT STRATEGIES?

A. Yes. I have previously examined the Company's investment strategies prior to 2015 as outlined in the materials provided to me by the Company, including testimony filed by Company witness Mr. George Tyson in the 2015 rate case, and found the strategy during that period to be reasonable and similar to other large pension plans.

Q. HAS THE COMPANY'S INVESTMENT STRATEGY PERFORMED AS EXPECTED DURING THE PERIOD 2015 - 2018?

A. Yes. The Company's investment strategy performed as expected with the hedging assets increasing and decreasing in value as interest rates changed with any improvements in funded status being driven by higher interest rates and returns in the Growth Portfolio above the increase in liability. Higher interest rates improve the funded status because the liability decreases more than the

asset value increases when the hedge ratio is less than 100 percent. Interest rates did increase slightly from the beginning of the period to the end of the period, which had a small positive impact on the funded status. During this period, diversified growth portfolios for pension plans, and other investors, generally had returns below what would be expected on a long-term basis.

One key contributer to the lower-than-expected returns was international equities where markets underperformed expectations primarily due to low economic growth. Most riskier growth-oriented assets performed poorly in both 2015 and 2018. The investment strategy produced returns approximately equal to the increase in liability related to market interest rates. The funded status of XEPP was slightly lower at the end of the period than it was at the beginning of the period due to factors other than the impact of market interest rates, i.e. changes in actuarial assumptions and demographic experience for the plan population.

As expected and desired, investment returns for XEPP were higher in years where the liability increased more and lower in years when the liability increased less or decreased. The use of interest rate triggers worked well as it resulted in increases in the interest rate hedge, when it was less expensive to purchase those hedging assets, and prior to drops in interest rates so that more of the increase in liability value was hedged by an increase in asset values. The performance of the XEPP portfolio was similar to the performance of other large pension funds during this period.

III. TARGET ASSET ALLOCATIONS

Q. WHAT TOPIC DO YOU DISCUSS IN THIS SECTION OF YOUR TESTIMONY?

A. I address the reasonableness of the Company's current target asset allocation for its qualified pension funds during the period 2015 - 2018. A table summarizing the asset allocation for the XEPP during this period is attached as Exhibit___(REI-1), Schedule 2. I also briefly address the reasonableness of the Company's prior target asset allocations from 2007 to the present.

Q. WHAT FACTORS SHOULD THE COMPANY CONSIDER WHEN DECIDING WHAT ITS TARGET ASSET ALLOCATION SHOULD BE?

A. The target asset allocation should have the right level of risk, as defined by the investment strategy. To achieve the right level of risk a number of factors should be considered:

- the funded status of the plan;
- the status (open, closed, or frozen) of the plan;
- the size of the pension plan relative to the size of the plan sponsor's business;
- the financial health of the pension plan sponsor;
- liability profile of the pension plan formula;
- the duration (interest rate sensitivity) of the plan liability; and
- the demographic profile of the pension plan participants.

In addition, most plan sponsors evaluate market conditions and assess the potential for return from different asset classes and make adjustments as these factors change.

Q. IN YOUR OPINION, IS THE COMPANY'S TARGET ASSET ALLOCATION REASONABLE, INCLUDING CONSIDERATION OF THE DEMOGRAPHIC PROFILE OF THE PLAN PARTICIPANTS?

A. Yes. The Company's current asset allocation appears reasonable in light of the various factors that I described above. A range of different asset allocations might be considered reasonable, and the Company's current target is comfortably within that range. XEPP is still open to new participants and this is a key factor that underlies how much risk is being taken in order to achieve higher returns since it extends the investment time horizon.

Q. HAVE YOU ALSO REVIEWED THE COMPANY'S TARGET ASSET ALLOCATION FOR THE YEARS 2015 - 2018?

A. Yes. Generally, the target asset allocation has remained the same with relatively minor adjustments during this period. The biggest change has been the increase in the level of interest rate hedging. Since 2015, the following key changes have been made:

- There was a shift from corporate bonds to government bonds and derivatives in the Immunization Portfolio, although the hedge ratio remained about the same, in 2015.
- Exposure to commodities was reduced in 2016 and then eliminated in 2017.
- The small allocation to investment grade (core) debt was eliminated in 2017.
- A set of interest rate "triggers," whereby interest rate hedging is increased when rates go up, was added in 2016 and refined and extended in 2017.

- The level of interest rate hedging was increased late in 2016 and late in 2018 based on the interest rate trigger mechanism.
- The allocation to hedge funds was reduced in 2018 and the allocation to fixed income in the growth portfolio was increased.

Q. WAS THE COMPANY'S TARGET ASSET ALLOCATION REASONABLE DURING THE PERIOD FROM 2015 TO 2018?

A. Yes. The materials that I reviewed provide good reasons for each of the changes based on market conditions and other factors. More specifically, referring to each of the changes described above:

- The shift away from corporate bond exposure in 2015 was based on the level of corporate bond spreads. In late 2014, GSAM viewed spreads (the extra yield on corporate bonds relative to Treasury securities) as small and recommended the shift away from corporate bonds for 2015.
- Exposure to commodities has been reduced or eliminated by many pension funds due to the low expected returns and lack of hedging characteristics for pension liabilities.
- The investment grade debt allocation that was eliminated had low return expectations and also had duration that was too low to be valuable for interest rate hedging in a pension portfolio.
- Interest rate triggers are relatively common with pension plans because the value of hedging interest rate risk increases as interest rates increase.
- The interest rate triggers acted to increase interest rate hedging when rates were higher (and more likely to drop) and produced good short-term results after the hedge ratio increases in both 2016 and 2018.

- Many pension fund investors have been decreasing their allocation to hedge funds because expected returns for hedge funds have decreased significantly and fees are generally higher than other asset classes.

Q. IS IT REASONABLE TO ASSUME THAT THE COMPANY'S RETURN ON ITS PENSION FUND INVESTMENTS WILL MATCH THE U.S. STOCK MARKET RETURNS FOR A PARTICULAR YEAR?

A. No. The return on the pension fund will reflect the combination of returns for the asset classes that the portfolio is invested in. Equities (the stock market) will generally have the highest return expectation in any portfolio over time, but those returns are quite volatile, and in any one year, or even over periods of several years, they may have very high or very low returns that are not reflective of the long-term expectation. A portfolio designed to match returns in the U.S. equity market would be considered very risky, despite having a high long-term expectation for returns. A well-designed portfolio with a balance of objectives, including seeking high return, diversification, and other risk reduction will, over time, and in many years, have returns lower than the U.S. equity market.

Q. WHAT IS YOUR OVERALL CONCLUSION REGARDING THE REASONABLENESS OF THE COMPANY'S TARGET ASSET ALLOCATIONS?

A. The target asset allocation for the Company's pension plan is reasonable, and the changes in the asset allocation during the period 2015 – 2018 have been consistent with the investment strategy and based on sound assessments of market conditions; reflecting views commonly held by pension plan sponsors.

IV. CONCLUSION

Q. PLEASE SUMMARIZE YOUR TESTIMONY.

A. There is no single investment strategy or asset allocation that can be considered appropriate and reasonable for any particular pension plan and plan sponsor; but I consider the Company's investment strategy and asset allocation to be reasonable because it reflects the right risk framework and the level of risk that is appropriate for the circumstances of the XEPP and the plan population.

In addition, the current target allocation and changes in the asset allocation for the Company's plan over the period 2015 – 2018 are reasonable as they reflect broadly held views on market conditions and common approaches to adjusting asset allocation among pension investors.

Q. DOES THIS CONCLUDE YOUR TESTIMONY?

A. Yes.

R. Evan Inglis, FSA, CFA, EA, MAAA, FCA

Mr. Inglis is an Independent Consultant and also an Actuary with the Pension Benefit Guaranty Corporation. As a consultant and during his career he has developed and advised on investment strategies for pension plans and other retirement programs. He is an expert in assessing financial risk and managing assets relative to pension and retirement liabilities. He has over 30 years of experience working with employee benefit plan financial matters and is a frequent speaker and writer on a wide variety of pension, retirement and investment issues and ideas.

The following summarizes Mr. Inglis' career:

- Actuary with the Pension Benefit Guaranty Corporation (July 2019 to present)
- Independent Consultant for World Bank, D3P Global Pension Consulting and other organizations (December 2014 to present)
- Nuveen Asset Management (January 2015 to September 2018): Senior Vice President
- The Terry Group (1/2014 – 12/2014): Worked with the founders to develop business ideas and contacts and analyzed risks for a number of public pension situations.
- The Vanguard Group (2008 – 2013): Served as the chief actuary and advised pension clients on liability-driven investment strategies and served as a resource for institutional clients on pension and related issues
- Watson Wyatt (2003 – 2008): Lead actuary for General Motors account and led a multi-office team advising and supporting GM on pension and OPEB issues
- Watson Wyatt (1998 – 2003): Served as director of quality and developed and implemented a global quality program focused on efficiency, risk management, and producing high-value work for clients
- Watson Wyatt (1983 – 1998): Senior consulting actuary in Portland (Oregon), Seattle, Oslo and Stockholm

Mr. Inglis is a Fellow of the Society of Actuaries and a CFA Charterholder.

Mr. Inglis has played significant leadership roles within the actuarial profession. He served on the Society of Actuaries Board of Directors from 2012 - 2015 and currently is a member of the Public Plan subcommittee of the American Academy of Actuaries Pension Committee. He established and chaired the Continuing Education Committee for the Investment Section of the Society of Actuaries. He chaired the Pension Finance Task Force, jointly sponsored by the Society and the Academy. He has served on the Pension Practice Council of the Academy and the Pension Section Council of the Society, and has contributed to numerous other research and advocacy efforts within the profession.

Mr. Inglis has a global perspective. He worked in Norway and Sweden for Watson Wyatt, providing pension actuarial consulting services in the 1990s. He was the Global Director of Quality for Watson Wyatt, overseeing the implementation of standards of work and standard processes in the company's offices in Asia and the Americas in the 2000s. He has served as a consultant for the World Bank and other organizations assisting pension regulators in Costa Rica, India, Rwanda and Indonesia with pension actuarial, retirement income and investment issues.

Mr. Inglis is a thought leader in the pension, investment and retirement industry, writing and speaking frequently on various topics. Some of Mr. Inglis' recent contributions include:

- *Hitting the Wall – Why Investors Can Expect Lower Returns in the Near Future, and For a Long Time to Come* (Contingencies, March/April 2019)
- *Paying the Pension: Markets, Products and Choices* (Chapter in "Saving the Next Billion from Old-Age Poverty: Global Lessons for Local Action", 2017)
- *Feel Free Retirement Spending* (First prize in Society of Actuaries essay contest on diverse retirement risks 2016; covered in USA Today, CBS MoneyWatch, Investment News)
- *A Risk-based Framework for Pension Decision-making* (Contingencies Magazine, 2013)
