

January 29, 2025

Will Seuffert  
Minnesota Public Utilities Commission  
121 7th Place East, Suite 350  
St. Paul, Minnesota 55101-2147

RE: Comments of the Minnesota Department of Commerce  
Docket No. E-999/CI-23-151

Dear Mr. Seuffert:

Attached are the comments of the Minnesota Department of Commerce (Department) in the following matter:

In the Matter of an Investigation into Implementing Changes to the  
Renewable Energy Standard and the Newly Created Carbon Free Standard  
under Minn. Stat. § 216B.1691

The Investigation was initiated by the Minnesota Public Utilities Commission (Commission) on April 28, 2023.

The Department recommends **a transition to hourly tracking and matching of energy and carbon-free credit trading**, and is available to answer any questions the Minnesota Public Utilities Commission may have.

Sincerely,

/s/ Dr. SYDNIE LIEB  
Assistant Commissioner of Regulatory Analysis

### Comments of the Minnesota Department of Commerce

Docket No. E-999/CI-23-151

#### I. INTRODUCTION

The Minnesota Legislature created the carbon-free standard (CFS) with the passage of H.F. 7, which requires Minnesota electric utilities to reach 100% carbon-free electricity by 2040 and tasks the Minnesota Public Utilities Commission (Commission) with the implementation of the standard. The Commission laid out a series of proceedings to implement the standard in its July 7, 2023 *Notice of Docket Process and Timeline*,<sup>1</sup> and the current proceeding is the third round, which focuses on CFS compliance.<sup>2</sup>

Minn. Stat. § 216B.1691 subd. 2d, requires the Commission to issue orders on the criteria and standards necessary to measure CFS compliance and determine CFS compliance. The current proceeding focuses on how electric utilities will report preparedness and data required to determine achievement of the CFS standard. At face value, the measurement and achievement of the CFS concern the modification of a reporting template, however the ramifications of decisions in the current proceeding may, in some regards, be more consequential than those regarding resource eligibility. The current proceeding is fundamentally about what carbon-free electricity actually means in practice. The Commission must decide if carbon-free means clean, firm power that attempts to match real-time loads where they occur, or if carbon-free means retiring renewable energy certificates (RECs) from anywhere in the country while relying on fossil fuels for physical energy and grid reliability, or somewhere in between. What the Commission decides to measure, and how, will impact each of these issues.

#### II. PROCEDURAL BACKGROUND

The following procedural history outlines relevant Commission action to the current proceeding.

March 19, 2010	The Commission issues its <i>Order Clarifying Criteria and Standards for Determining Compliance Under Minn. Stat. § 216B.1691</i> in Docket No. E-999/CI-03-389. <sup>3</sup>
----------------	---

---

<sup>1</sup> Minnesota Public Utilities Commission, Notice of Docket Process and Timeline, July 7, 2023, (eDockets) [20237-197301-01](#) at 2, (hereinafter “Notice of Docket Process and Timeline”).

<sup>2</sup> Minnesota Public Utilities Commission, Notice of Comment Period and Updated Timeline, October 31, 2024, (eDockets) [202410-211486-01](#), (hereinafter “Notice”).

<sup>3</sup> *In the Matter of Detailing Criteria and Standards Measuring an Electric Utility's Good Faith Efforts in Meeting the Renewable Energy Objectives Under Minn. Stat. 216B. 169*, Minnesota Public Utilities Commission, Order Clarifying Criteria and Standards for Determining Compliance Under Minn. Stat. § 216B.1691, March 19, 2010, Docket No. E-999/CI-03-869, (eDockets) [20103-48177-01](#), (hereinafter “March 19, 2020 Order”).

July 7, 2023	The Minnesota Legislature signs H.F. 7 into law, which created the CFS and amended Minn. Stat. § 216B.1691 to increase the Renewable Energy Standard (RES) to 55 percent by 2035. <sup>4</sup>
July 7, 2023	Commission issues its <i>Notice of Docket Process and Timeline</i> which set comment period dates for changes to RES and Solar Energy Standard (SES; Round 1), new and amended terms (Round 2), CFS compliance (Round 3), and the off ramp process (Round 4). <sup>5</sup>
December 6, 2023	The Commission issues its order for Round 1 of comments. The Commission orders that a hydroelectric facility greater than 100 MW and built before February 8, 2023 qualifies for compliance with the RES. The Commission also states that RECs are eligible for use in the year of generation and for four years following the year of generation. <sup>6</sup>
April 12, 2024	The Commission issues its order for Round 1.5 of comments. <sup>7</sup>
June 28, 2024	The Department submits its comments for Round 2. <sup>8</sup>
July 25, 2024	Midwest Renewable Energy Tracking Systems (M-RETS) submits its comments for Round 2. <sup>9</sup>
October 31, 2024	The Commission issues its Notice of Comment for the current proceeding.
November 7, 2024	The Commission issues its <i>Order Initiating New Docket and Clarifying "Environmental Justice Area"</i> which created the Docket No. E-999/CI-24-352 to further record development on partial compliance and the application of fuel life-cycle analysis. <sup>10</sup>

<sup>10</sup> Minnesota Public Utilities Commission, Order Initiating New Docket And Clarifying "Environmental Justice Area," November 7, 2024, Docket No. E-999/CI-24-352, (eDockets) [202411-211701-01](#), (hereinafter "November 7, 2024 Order").

Topic(s) open for comment:

- When and how should utilities report preparedness for meeting upcoming CFS requirements?
- By which criteria and standards should the Commission measure an electric utility's compliance with the CFS?
- What considerations should the Commission take into account regarding the double counting of Renewable Energy Credits (RECs) to meet multiple requirements?
- How should net market purchases be counted towards CFS compliance?
- Are there other issues or concerns related to this matter?

The Minnesota Department of Commerce (Department) submits its comments in the context of multiple competing proceedings, including the newly created Docket No. E-999/CI-24-352,<sup>11</sup> which has implications for how partial compliance and market purchases are measured and reported for CFS compliance. In addition, the fourth round of comments concerns the "Off Ramp Process," which will discuss modifications to the Commission's March 19, 2010 Order in Docket No. E999/CI-03-869.<sup>12</sup> The Commission's March 19, 2010 Order also includes criteria and standards related to measurement and achievement,<sup>13</sup> which makes it difficult to separate relevant topics open for comment in each separate proceeding. The Department addresses overlaps with other proceedings, and describes these conflicts in relevant areas of Section III.

### III. DEPARTMENT ANALYSIS

#### A. *WHEN AND HOW SHOULD UTILITIES REPORT PREPAREDNESS FOR MEETING UPCOMING CFS REQUIREMENTS?*

Per Minn. Stat. § 216B.1691 subd. 2g, utilities are not required to begin demonstrating CFS compliance until "the end of [...] 2030," which means that the first CFS compliance report will be filed in 2031.

Before the first CFS compliance reports are filed, utilities will need to begin planning to meet the requirements. Utilities that meet the definition of a "utility" under Minn. Stat. § 216B.2422,<sup>14</sup> which requires Integrated Resource Plans (IRPs), are required to engage in long term generation planning that includes an analysis of renewable generation and the state's decarbonization goals. IRPs are the main planning tool that utilities use to determine future energy generation. Resource plans determine future resource acquisitions that will be required to demonstrate CFS compliance, and these decisions need to be made several years in advance in order to meet the 2030 CFS compliance requirement. In addition to IRPs, Minn. Stat. § 216B.1691 subd. 3(a) requires utilities to report their ability to meet CFS compliance in an IRP or a separate report at least every two years, with requirements including:

(1) the status of the utility's renewable energy mix relative to the standard obligations;

---

<sup>11</sup> See Order Point 1. November 7, 2024 Order.

<sup>12</sup> Notice of Docket Process and Timeline at 2.

<sup>13</sup> See Section I. Issues 1, 2, and 4 and Order Points 1, 2, and 7-10. March 19, 2020 Order at 3 and 11-12.

<sup>14</sup> See subdivision 1(b) for the definition of a "Utility."

- (2) efforts taken to meet the standard obligations;
- (3) any obstacles encountered or anticipated in meeting the standard obligations;
- (4) potential solutions to the obstacles;

Based on these requirements, the Department concludes that Minn. Stat. § 216B.1691 clearly prescribes both the “when and how” regarding the Commission’s Notice.

While CFS compliance reporting covered by utilities required to file IRPs will cover a majority of Minnesota’s energy generation, the definition of an “electric utility” under Minn. Stat. § 216B.1691 subd. 1(d) is more expansive in scope compared to the definition of a “utility” under Minn. Stat. § 216B.2422 subd. 1(b). For these utilities, the Department concludes that the requirements of Minn. Stat. § 216B.1691 subd. 3(a) will be sufficient to ensure that the utilities plan to meet CFS compliance requirements.

While the manner and timing of CFS preparedness reporting are stipulated by statute, there is a need to prepare for CFS compliance ahead of the statutory requirement to ensure utilities report correctly. Utilities will need to begin tracking and reporting on a larger share of their generation mix, and will have multiple competing requirements that may all fall under the umbrella CFS accounting system. The Commission should not assume that every electric utility that files its first compliance report will get every aspect of the report correct. Allowing utilities time to build institutional knowledge and develop internal processes before the first required CFS report is due will help prevent compliance issues. Any unforeseen issues that may arise during a preparation window can be remedied by the Commission without consequence to the reporting utilities.

***The Department recommends that the Commission order electric utilities to begin to report CFS compliance in 2029 for generation year 2028.***

Utilities will also need a tracking system in place to ensure accurate accounting and retirement of RECs for each applicable standard, including the existing RES,<sup>15</sup> SES,<sup>16</sup> and Distributed Solar Energy Standard (DSES).<sup>17</sup> Minn. Stat. § 216B.1691 subd. 4(d) requires:

“[t]he commission shall require all electric utilities to participate in a commission-approved credit-tracking system or systems. Once a credit-tracking system is in operation, the commission shall issue an order establishing protocols for trading credits.”

The current tracking system administered by M-RETS is not capable of implementing the full potential range of CFS tracking requirements related to partial compliance.<sup>18</sup> The Commission will issue orders

---

<sup>15</sup> Statutorily defined as the “Eligible Energy Technology Standard.” See Minn. Stat. § 216B.1691 subd. 2a.

<sup>16</sup> See Minn. Stat. § 216B.1691 subd. 2f.

<sup>17</sup> See Minn. Stat. § 216B.1691 subd. 2h.

<sup>18</sup> For example, M-RETS does not currently issue RECs based on the non-renewable share of co-fired generation with mixed renewable and non-renewable sources. See M-RETS July 25, 2024 Comments at 2. Under this system, hydrogen could be

regarding partial compliance in Docket No. E-999/CI-24-352, and therefore the REC tracking mechanisms will evolve in that proceeding. While the Department concludes the current docket is the appropriate docket to discuss regarding REC tracking, the most complex REC tracking matters pertain to life-cycle assessment inputs, partial credits, co-firing, and intermediate retirement of RECs to generate hydrogen—as well as other technologies that may arise. The final tracking mechanisms will depend on the Commission’s order in Docket No. E-999/CI-24-352.

***The Department recommends that any decisions regarding modifications to the existing REC tracking system be made in Docket No. E-999/CI-24-352.***

It is not necessary to discuss further preparedness of the REC tracking system at this time, because the only relevant consideration is whether the system can appropriately track and retire RECs according to future Commission orders.

***B. BY WHICH CRITERIA AND STANDARDS SHOULD THE COMMISSION MEASURE AN ELECTRIC UTILITY’S COMPLIANCE WITH THE CFS?***

The Department understands Notice Topic 2 to pertain to Minn. Stat. § 216B.1691 subd. 2d(a) and subd. 2d(b)(1). The relevant statute states:

**Commission order.**

(a) The commission shall issue necessary orders detailing the criteria and standards used to: (1) measure an electric utility's efforts to meet the standards under subdivisions 2a, 2f, and 2g; and (2) determine whether the utility is achieving the standards.

(b) In the order under paragraph (a), the commission shall include criteria and standards that: (1) protect against undesirable impacts on the reliability of the utility's system and economic impacts on the utility's ratepayers and that consider technical feasibility;

The Department addresses each of these requirements in the following subsections:

- Subd. 2d(a)(1): Section B.1 - Criteria and Standards for the Measurement of CFS Compliance
- Subd. 2d(a)(2): Section B.2 - Criteria and Standards for the Determination of CFS Achievement
- Subd. 2d(b)(1): Section B.3 - Criteria and Standards for Reliability Impacts
- Subd. 2d(b)(1): Section B.4 - Criteria and Standards for Economic Impacts
- Subd. 2d(b)(1): Section B.5 - Criteria and Standards for Technical Feasibility
- Subd. 2d(b)(2): Section B.6 - Criteria and Standards for Partial Compliance

---

awarded full RECs even if the fossil fuel input to generate the hydrogen was greater than the net energy output of the hydrogen.

The Department notes that Minn. Stat. § 216B.1691 subd. 2d(b)(2) pertains to criteria and standards related to partial compliance including market purchases, which will be discussed in Docket No. E-999/CI-24-352, as well as in Notice Topic 4, and are therefore not discussed in this section.

*B.1. Criteria and Standards for the Measurement of CFS Compliance*

*B.1.1. Tracking of Electric Utility Credit Sales and Imports*

Minn. Stat. § 216B.1691 subd. 2g sets a clear standard to match percentages of an electric utility's "total retail electric sales to retail customers in Minnesota" with carbon-free electricity, however the statute is silent on electric generation from CFS-ineligible generation sources such as coal and natural gas-fired generation, or the carbon-emitting fraction of energy generation from partially compliant sources.

Nothing in the CFS precludes a utility from maintaining or building additional CFS-ineligible generation, for example, in order to meet MISO capacity requirements. Such resources will be dispatched according to the MISO merit order, which penalizes higher-variable cost resources such as future carbon-free hydrogen combustion turbines, for example. Even when all Minnesota utilities achieve 100% carbon-free electricity, all generation, including CFS-ineligible generation will be dispatched by MISO to meet grid capacity needs. If sufficient carbon-free capacity does not exist at any one time, and as discussed above, there is no guarantee that carbon-free capacity will be dispatched by MISO to meet of all Minnesota's capacity needs. Instead, the likely outcome is that if utilities do not possess sufficient carbon-free capacity, or if the carbon-free capacity is too expensive to routinely dispatch in the MISO merit order, MISO will dispatch lower cost CFS-ineligible resources external to utility-owned or -operated resources to meet Minnesota's capacity needs.<sup>19</sup> The Department notes that, in the MISO dispatch process utilities can require MISO dispatch to occur out of economic merit order. This anomaly currently happens for some coal plants, for example.

In practice, an electric utility may happen to generate electricity to match its total retail electric sales, but may not generate sufficient carbon-free electricity to match its total retail electric sales. In any instance where an electric utility does not generate enough carbon-free electricity to match its total retail electric sales, an electric utility may need to purchase energy attribute certificates (EACs)<sup>20</sup> to fill in the generation gap between carbon-free generation and load.

Electric utilities must always pay for their load at the locational marginal price (LMP), but are not required to pay for EACs to match their real time load. In this example, the result is an electric utility generating or importing electricity which cannot be counted as carbon-free, even if the electricity at the time is 100% carbon-free.<sup>21</sup> The remainder of the time, the electric utility's CFS-ineligible power plant will be dispatched by MISO, or the electric utility will rely on the MISO grid mix, which contains a significant amount of CFS-ineligible generation. In practice, electric utilities should not be asked to

---

<sup>19</sup> Note that MISO does not recognize state borders and MISO dispatches power plants to meet total system load requirements. However, Minnesota contributes to the total MISO load.

<sup>20</sup> The IRS 45V tax credits for hydrogen use the term "energy attribute certificate" for RECs and other credits that can be retired to demonstrate compliance with the regulation. See [26 CFR Ch. I, Sch. A, § 1.45V-4 Paragraph \(d\)\(2\)\(iii\)](#).

<sup>21</sup> The only scenario in which this example could occur is if MISO is 100% Carbon-free.

track CFS-ineligible generation because generation and load operate separately and exist in multi-state markets that electric utilities (and the Commission) do not control.

Instead, electric utilities should track all instances when electric utility buys or sells EACs. The quality of this information depends on the Commission's decision in the next section, regarding an hourly matching requirement. If annual EAC matching is required, then electric utilities would only need to true-up EAC generation to load once per year by the purchase or potential sale of EACs. This information would provide little indication of an electric utility's reliance on CFS-ineligible generation for grid reliability needs, because gaps and surpluses in CFS-eligible generation will cancel each other out. If hourly EAC matching is required, then electric utilities would need to true-up generation each hour, which may require sales of EACs when generation exceeds load, and purchases of EACs when EAC generation is insufficient to match load. Electric utilities would need to use demand-side data such as advanced metering infrastructure (AMI) to determine if the Minnesota share of their electric load was sufficiently matched by EACs. This information would highlight both hourly and seasonal gaps in EAC generation, which are discussed further in Section III.B.1.2.

***The Department recommends that the Commission order electric utilities to all report sales and purchases of EACs at the time interval required for CFS matching.***

The above requirement would not provide data on the full reliance of electricity not covered by EAC generation. Even though load data would be required to determine if EACs should be purchased or sold, electric utilities would not have to report hourly load, and therefore any gaps in EAC generation that are not covered by EACs will not be reported.<sup>22</sup> The Department provides a separate recommendation for the reporting of load data because the reporting of load data would impose additional reporting requirements with different benefits. The main benefit of hourly load data coupled with CFS-eligible generation data is that electric utilities would then be required to report reliance of all generation required to match load regardless of whether EACs were purchased to match load. Therefore, these data would provide the entire data set of an electric utility's reliance upon potentially CFS-ineligible generation.

***The Department recommends that the Commission order electric utilities to all report hourly Minnesota retail electric sales.***

The Department does not argue that the tracking of EAC purchases, sales, and total load matching should be used to determine CFS achievement, but should instead be used to help the Commission and intervenors understand the influence of potentially CFS-ineligible generation assets required to serve each electric utility's Minnesota load. The Department notes that its recommendation above can be implemented without a requirement for hourly EAC matching, as the requirement is for informational purposes only.

#### *B.1.2. Hourly Matching*

---

<sup>22</sup> Such gaps in data would occur before CFS compliance reaches 100%, or if electric utilities claim exemptions from hourly matching.

### B.1.2.1 Statutory Interpretation of Hourly Matching

The CFS requires a utility to generate or procure a certain percentage of the utility's total retail electric sales to retail customers in Minnesota from a carbon-free energy technology by specified years. Minn. Stat. § 216B.1691, subd. 2g states:

**Carbon-free standard.**

In addition to the requirements under subdivisions 2a and 2f, each electric utility must generate or procure sufficient electricity generated from a carbon-free energy technology to provide the electric utility's retail customers in Minnesota, or the retail customers of a distribution utility to which the electric utility provides wholesale electric service, so that the electric utility generates or procures an amount of electricity from carbon-free energy technologies that is equivalent to at least the following standard percentages of the electric utility's total retail electric sales to retail customers in Minnesota by the end of the year indicated:

- (1) 2030 80 percent for public utilities; 60 percent for other electric utilities
- (2) 2035 90 percent for all electric utilities
- (3) 2040 100 percent for all electric utilities.<sup>23</sup>

The statute does not specify how electric sales should be tracked for purposes of CFS compliance. "Total retail electric sales" is defined by Minn. Stat. § 216B.1691, subd. 1(f), to mean "the kilowatt-hours of electricity sold in a year by an electric utility to retail customers of the electric utility or to a distribution utility for distribution to the retail customers of the distribution utility." But, sales do not take place annually— instead the MISO real-time market clears bids every five minutes.<sup>24</sup> The statute is clear that a utility must be in compliance with the CFS by the end of the specified years, meaning a utility cannot calculate its total retail electric sales for the year then seek to comply with the statute, because total sales and CFS compliance are ultimately determined at the same time. The most accurate representation of sales is to represent the actual sales environment with the best available data. Currently, the electric industry is moving towards an hourly-matching construct, which strikes a balance between data resolution and the feasibility of implementation. This tracking mechanism is already available in the market; for example, M-RETS offers an hourly EAC tracking service to meet sustainability goals.<sup>25</sup>

Notably, Minn. Stat. § 216B.1691, subd. 2d(a), provides the Commission with the authority to issue orders "detailing the criteria and standards used to [...] measure an electric utility's efforts to meet" the CFS. A requirement to use hourly matching is consistent with this grant of statutory authority, and,

---

<sup>23</sup> [Minn. Stat. § 216B.1691, subd. 2g](#)

<sup>24</sup> Midcontinent Independent System Operator, *MISO Markets and Market Participation Overview*, (N.D.). Available at: <https://cdn.misoenergy.org/Fact%20Sheet%20-%20MISO%20Market%20Participation%20Overview632546.pdf>

<sup>25</sup> Midwest Renewable Energy Tracking Systems, Solutions: 24/7 Hourly Tracking, (N.D.). Available at: <https://www.mrets.org/solutions/hourly-tracking/>

as explained below, would lead to more accurate data and is more likely to achieve the ultimate goal of shifting energy generation to carbon-free technology.

#### B.1.2.2 Justification for Hourly Matching

In addition to the authority granted to the Commission under Minn. Stat. § 216B.1691, subd. 2d(a), the use of hourly matching finds support in the code of federal regulations. For example, hourly matching is set by the Internal Revenue Service (IRS) for 45V credits, which require hourly matching for hydrogen generation.<sup>26</sup> Like the CFS, this requirement goes into effect in 2030.<sup>27</sup> The IRS regulations implement hourly matching by requiring that, starting in 2030, EACs include “the date and hour (including time zone, or in UTC) in which such electricity was generated.”<sup>28</sup> As noted above, M-RETS, the Commission-approved tracking system for RECs in Minnesota, offers hourly-tracking data, and utilities that utilize RECs to satisfy the renewable-energy standards established in Minn. Stat. § 216B.1691 are already required to include “the dates when the energy associated with the credits was generated” when filing their utility plans with the Commission.<sup>29</sup>

The Department relies on 45V tax credit guidance, as published on January 10, 2025,<sup>30</sup> throughout its comments in this section because the tax credits contemplate decarbonization in an electric grid that is not currently decarbonized. The regulations laid out by the IRS ensure that increased electric generation for decarbonization does not result in the new requirements for the dispatch of the MISO marginal unit, which is often a fossil fuel generator.<sup>31</sup> The Department concludes that the same logic should apply to all electric generation needed to fulfill CFS compliance requirements.

Under an hourly EAC matching system, electric utilities would sell EACs when generation exceeds sales and would purchase EACs when electric utility-owned or -operated assets do not supply a sufficient number of EACs to match the hourly total retail electric sales.

To highlight the importance of hourly tracking, it is important to discuss what CFS compliance could look like in its absence. Figure 1 shows what would be a CFS-compliant average hourly generation curve to meet the needs of flat retail sales, if sales are totaled annually. In this example, from 7:00 AM to 6:00 PM the solar system would fully supply demand and would lead to net energy exports as well

<sup>31</sup> In 2024, coal and gas were the marginal unit for 78.9% of all five-minute intervals averaged over MISO North, South, and Central. Midcontinent Independent System Operator, *Market Reports – Historical Real-Time Fuel on the Margin (zip)*, (N.D.). Available at: [https://www.misoenergy.org/markets-and-operations/real-time--market-data/market-reports/#nt=%2FMarketReportType%3AReal-Time%2FMarketReportName%3AHistorical%20Real-Time%20Fuel%20on%20the%20Margin%20\(zip\)&t=10&p=0&s=MarketReportPublished&sd=desc](https://www.misoenergy.org/markets-and-operations/real-time--market-data/market-reports/#nt=%2FMarketReportType%3AReal-Time%2FMarketReportName%3AHistorical%20Real-Time%20Fuel%20on%20the%20Margin%20(zip)&t=10&p=0&s=MarketReportPublished&sd=desc)

as net EAC generation.<sup>32</sup> In the remaining 13 hours of the day, the electric utility would then rely on energy imports, but could draw down its net EACs to claim CFS compliance.

**Figure 1: Illustration of the Problem with Annual CFS EAC Purchases**

Source: NREL PVWatts<sup>33</sup>

If electric utilities attempt to generate annual EACs to fulfill their CFS obligations, this strategy could expose the utilities to increased electricity market risks. In the above example, generation would not be matched to load, and the electric utility would have increased buy-side and sell-side exposure in the MISO market, which increases ratepayer risks. The seasonal generation patterns of wind and solar may expose electric utilities to seasonal over- or under-exposure as well.<sup>34</sup>

Should other electric utilities attempt to meet the CFS requirements with the same resource, the cost of energy and EACs in the above example may decrease between 7:00 AM to 6:00 PM if the energy and EAC markets become oversupplied.<sup>35</sup> If all electric utilities rely on significant net energy exports, curtailment will be more likely, or the energy must be stored. Switching to hourly REC matching would then send appropriate price signals to build new power generation or storage that can supply EACs during hours when EAC generation cannot fully supply load.

In addition to economic concerns, hourly matching would also advance the State's environmental goals. In the above example, the remaining 13 hours of the day could be served physically on natural gas or coal power, because the net generation of EACs would be sufficient to claim that all electricity is carbon-free, even though for 13 hours of the day, an electric utility's power generation could come

<sup>32</sup> Note that EACs are used here to describe RECs and alternative energy credits (AECs) including nuclear and partial compliance credits.

<sup>33</sup> 100 MWac solar array with single axis tracking and bifacial modules without losses in Saint Paul, MN. National Renewable Energy Laboratory, NREL's PVWatts Calculator, (N.D.). Available at: <https://pvwatts.nrel.gov>

<sup>34</sup> For example, see Figure 2 in Section III.B.3.

<sup>35</sup> For example, see <https://blog.gridstatus.io/curtailment/>

from CFS-ineligible resources. It would be appropriate to argue that because Minnesota operates in a larger electric transmission network, that net renewable energy exports would offset fossil fuel generation elsewhere. However, it cannot be assumed that this scenario will always be the case. As renewable generation approaches 100% for certain hours of the day, the generation could result in curtailment of other renewable generation rather than a ramp down of fossil fuel generation and will become increasingly problematic as Minnesota approaches its 100% CFS goal. Therefore, a reliance on non-utility load to absorb excess generation should not always be assumed to result in lower carbon emissions.

***The Department recommends that the Commission order hourly matching for CFS compliance for electric all electric utilities.***

If the Commission decides to implement some form of hourly matching, the Commission would also need to partially rescind its December 18, 2007 Order that allowed utilities to bank EACs for a period of up to four years.<sup>36</sup> Even if the Commission does not decide to implement any hourly matching requirement, the Department still recommends a rescission of this order to better match EAC generation to actual retail sales.

***The Department recommends that the Commission rescind its order points 1 and 3 from its December 18, 2007 Order in Docket Nos. E-999/CI-04-1616 and E999/CI-03-869 and modify order point 6 of the Commission's December 6, 2023 Order in Docket E-999/CI-23-151 to remove "All renewable energy credits generated from such facilities will be eligible for use in the year of generation and for four years following the year of generation." These orders will be rescinded/modified effective January 1, 2030.***

#### B.1.2.2 Timing of Hourly Matching Requirement

While the IRS 45V tax credits require hourly matching by 2030,<sup>37</sup> the Department understands that hourly matching may impose an undue burden by requiring hourly matching to begin at the same time as CFS compliance. Therefore, the Department proposes a phased approach to allow electric utilities sufficient time to include hourly matching in IRPs and to begin reporting on CFS compliance.

***The Department recommends that the Commission order the following total retail electric sales matching requirements for electric utilities by the end of the year indicated:***

- 1) 2030: Annual matching of 80 percent for public utilities; 60 percent for other electric utilities***
- 2) 2035: Hourly matching of 80 percent for public utilities; 60 percent for other electric utilities***
- 3) 2040: Hourly matching of 90 percent for all electric utilities***
- 4) 2045: Hourly matching of 100 percent for all electric utilities.***

---

<sup>36</sup> *In the Matter of a Commission Investigation into a Multi-State Tracking and Trading System for Renewable Energy Credits and In the Matter of Detailing Criteria and Standards for Measuring an Electric Utility's Good Faith Efforts in Meeting the Renewable Energy Objectives Under Minn. Stat. §216B.1691*, Minnesota Public Utilities Commission, Order Establishing Initial Protocols for Trading Renewable Credits, December 18, 2007, Docket Nos. E-999/CI-04-1616 and E999/CI-03-869, (eDockets) [4872138](#).

<sup>37</sup> [26 CFR Ch. I, Sch. A, § 1.45V-4 Paragraph \(d\)\(2\)\(iii\)\(E\)](#)

#### B.1.2.3 Inclusion of Hourly Matching in IRPs

Utilities that are required to match hourly retail sales should also be required to model hourly matching in IRPs. Requiring hourly matching constraints in IRPs will help setup electric utilities to acquire resources that best fit modeled hourly retail electric sales. This requirement will ensure that electric utilities are not overly dependent on EAC markets and any market instability that may increase the financial burden imposed upon ratepayers.

***The Department recommends that the Commission order all integrated resource plans where the utility uses a capacity expansion model to incorporate hourly matching constraints in the models to demonstrate CFS compliance.***

#### B.1.2.4 Status of EAC Markets

The Department recognizes that while tracking mechanisms exist for hourly EACs, a market trading solution currently does not yet appear to exist. Electric utilities will need to both track, buy and sell EACs to match total retail electric sales with EACs. The Granular Certificate Trading Alliance is currently working towards a market trading platform, but the platform does not appear to be active yet.<sup>38</sup> Even when the market becomes active, or others like it, there will still be tangible problems to solve, which include, but are not limited to:

1. When EACs are generated and sold (i.e. subsequent hour or later);
2. Eligibility for day ahead and/or real time trading;
3. True-ups if day ahead trading is required to matched with real time sales;
4. Use of day ahead, or two-day ahead load forecasts;<sup>39</sup>
5. Use of AMI meter data;
6. Methodology to measure real time hourly retail sales data to generate the need for hourly RECs; and
7. Potential exemptions for electric utilities who do not have AMI meter data or forecasting abilities.

The Department contends that hourly matching requirements can be enforced to a certain extent by using only utility-owned or operated resources to meet hourly matching quotas, and that EAC markets are only necessary to achieve full hourly EAC compliance. Therefore, the ongoing development of EAC markets should not be viewed as a justification to not implement hourly matching. In addition, the Department recommends that EAC matching begin ten years from now, which leaves ample room for hourly EAC markets to mature.

In the meantime, the Department concludes that monitoring of EAC market development is the most appropriate course of action.

---

<sup>38</sup> The GC Trading Alliance, *Building the market infrastructure for time- and location-based carbon-free energy*, (N.D.). Available at: <https://www.leveltenenergy.com/alliance>

<sup>39</sup> For example, if day ahead trading is allowed, an electric utility would have to know its load requirement when day ahead trading begins, which would require the forecast be generated in the prior day.

***The Department recommends that the Commission order the Department to submit an annual compliance report that outlines the status of EAC markets and provides potential options to implement hourly EAC trading for electric utilities.***

The Department recommends to monitor the status of EAC markets for three years, upon which time the Commission will open a docket to determine the rules by which hourly trading of EACs will be regulated. A Commission order in 2029 will allow electric utilities five years to prepare for the hourly matching requirement that begins in generation year 2035.

***The Department recommends the Commission order that a new docket be opened in 2029, which shall determine the requirements necessary to facilitate the sales and purchases of hourly EACs.***

#### *B.1.3. EAC Purchase Region*

Electric utilities are currently under no obligation to ensure that EACs generated or purchased to meet the CFS actually supply Minnesota's electric needs, as power markets and EAC markets operate independently. Minn. Stat. § 216B.1691, subd. 4, states:

(b) In lieu of generating or procuring energy directly to satisfy a standard obligation under subdivision 2a, 2f, or 2g, an electric utility may utilize renewable energy credits allowed under the program to satisfy the standard.

(c) The commission shall facilitate the trading of renewable energy credits between states.

(d) The commission shall require all electric utilities to participate in a commission-approved credit-tracking system or systems. Once a credit-tracking system is in operation, the commission shall issue an order establishing protocols for trading credits.

The statute clearly states that the Commission must allow for both the purchase of EACs and the trading of EACs between states, but imposes no geographic boundary upon the purchase and trading of EACs. Therefore, electric utilities could purchase annual or hourly EACs in California, Texas, Maine, or any other state or region outside of a balancing authority for which Minnesota operates within or for which MISO regularly trades with.

The electric transmission system is complex and interconnected throughout the country, but real transmission constraints have a material effect on power flows. The IRS 45V tax credit for hydrogen contemplates power flows by defining regions,<sup>40</sup> and then requires that electric generation used to generate hydrogen be sourced from a facility that is in the same region,<sup>41</sup> otherwise it shall use the regional power mix.<sup>42</sup> The regulation also allows for interregional transfers, provided that 1) the owner of the EAC has transmission rights outside of the region 2) the owner settles the transaction within the

---

<sup>40</sup> [26 CFR Ch. I, Sch. A, § 1.45V-4 Paragraph \(d\)\(2\)\(ix\)](#)

<sup>41</sup> [26 CFR Ch. I, Sch. A, § 1.45V-4 Paragraph \(d\)\(3\)\(iii\)\(A\)](#)

<sup>42</sup> [26 CFR Ch. I, Sch. A, § 1.45V-4 Paragraph \(a\)\(2\)](#)

region and 3) the owner does not have any reverse transactions to counteract the sale.<sup>43</sup> These regulations help ensure that carbon-free power generation is realistically capable of meeting local energy needs.

The 45V regulation defines the “Midcontinent ISO (Balancing Authority): North and Central” within the “Midwest” region, and the “Midcontinent ISO (Balancing Authority): South” within the “Delta” region, which reflects power transfer constraints between the Midcontinent Independent System Operator (MISO) North/Central and South.<sup>44</sup> These constraints can and should be considered for the implementation of the CFS. The absence of such a requirement would enable Minnesota electric utilities to source clean power from anywhere in the country, regardless of whether the power has any chance of physically meeting state energy needs, similar to how the Low Carbon Fuel Standard (LCFS) operates.

***The Department recommends that the Commission order that all EACs retired to demonstrate CFS compliance be generated within the Midwest Region, as defined by 26 CFR Ch. I, Sch. A, § 1.45V-4 Paragraph (d)(2)(ix), or meet the 45V requirements for interregional delivery, as defined by 26 CFR Ch. I, Sch. A, § 1.45V-4 Paragraph (d)(3)(iii)(B).***

The Department notes that it may not always be possible to purchase RECs from the Midwest region. The Department intends to discuss appropriate off-ramps in the Round 4 comment period, but recommends regional compliance as the standard to meet before exemptions are granted.

#### *B.1.4. Multiple EACs*

Depending on decisions to be made in Docket No. E-999/CI-24-352, there a possibility that multiple EACs could be issued for each MWh of generation. Such examples could include negative emitting refuse-derived fuel, waste biomass, bioenergy with carbon capture and storage (BECCS), or any other energy technology that results in negative emissions. In addition, there is the possibility to issue multiple CFS-ineligible credits for emissions above a baseline.<sup>45</sup>

While the Department recommended the usage of fuel life-cycle assessment to determine partial compliance in its June 28, 2024 Comments,<sup>46</sup> the Department recommends here that limits would simplify the reporting of negative and positive emissions from electricity generation. Minn. Stat. § 216B.1691 subd. 4(a) states:

The program must treat all eligible energy technology equally and shall not give more or less credit to energy based on the state where the energy was generated or the technology with which the energy was generated.

---

<sup>43</sup> [26 CFR Ch. I, Sch. A, § 1.45V-4 Paragraph \(d\)\(3\)\(iii\)\(B\)](#)

<sup>44</sup> MISO can transfer 3,000 MW from MISO North to South, which is less than 10% of MISO South’s peak load. Union of Concerned Scientists, *How Transmission—Not Gas—Will Bolster Winter Grid Reliability: A Look at MISO South*, (January 6, 2025). Available at: <https://blog.ucsusa.org/paul-arbaje/how-transmission-not-gas-will-bolster-winter-grid-reliability-a-look-at-miso-south/>

<sup>45</sup> If CFS-ineligible generation is tracked for the generation of hydrogen, then coal could receive approximately double credits compared to natural gas, if natural gas is a baseline.

<sup>46</sup> June 28, 2024 Comments at 2.

While subdivision 4 relates to the quantification of RECs, the statute offers guidance that RECs issued under the RES should be treated equally, regardless of technology. It would be logical for the Commission to extend the applicability of Minn. Stat. § 216B.1691 subd. 4(a) to all EACs and not provide special treatment for the CFS compared to the RES.

In addition, the statutory definition of “carbon-free” provides support to set a floor for the reporting of negative emissions. Pursuant to Minn. Stat. § 216B.1691, subd. 1(b), “carbon-free” is defined as “a technology that generates electricity without emitting carbon dioxide.” The definition of carbon-free does not suggest that additional credits should be issued for negative emitting technologies. Rather, electricity generation “without” emissions should be considered “carbon-free,” and EACs should be issued based on the amount of carbon-free electricity that is actually generated.

The existing system to report RES and SES compliance in Docket No. E999/PR-YR-12 relies on ledgers to prove that RECs were retired in quantities sufficient to meet required standards. The Department recommends that the fundamental reporting structure be retained by limiting the number of EACs that can be generated to between zero and one EAC issued per MWh of electricity generation. The same limitation would be imposed upon the reporting of CFS-ineligible generation, should this generation be tracked in some way. Without going into details to be discussed in Docket No. E-999/CI-24-352, this limitation would decouple the fuel life-cycle analysis carbon footprint from the actual energy generation reported to meet CFS standards. Fuel life-cycle analysis would then only be used to determine if one MWh of electricity generation should receive zero-to-one EAC.

To further highlight the importance of this proposal, consider how the system would look without this limitation. If electric utilities are allowed to report multiple EACs per MWh of electricity generated, then electric utilities would be allowed to generate less than the full amount of electricity required to meet their total retail electric sales, and would by extension then have to make up for actual power needs from other sources that may not be carbon-free. The allowance of multiple EACs could make Minnesota more reliant on fossil fuels to make up for gaps in actual power needs by creating a larger gap between the amount of carbon-free electricity actually generated and utility load.

This proposal would also simplify reporting requirements. Rather than requiring that all or most electricity generation that requires a fuel life-cycle analysis report the results of the analysis in order to generate EACs, certain resources could be made exempt if they can demonstrate 100% carbon-free electricity generation, and would then not need to be formally tracked in downstream reporting processes.

***The Department recommends that the Commission order EACs to only be issued in quantities of 0-1 EAC per megawatt-hour.***

The Department acknowledges that the Commission may choose to decide whether this standard should apply in Docket No. E-999/CI-24-352, however given the broad nature of the recommendation, and its direct relationship to measurement and reporting, the Department presents its recommendation here.

## ***B.2. Criteria and Standards for the Determination of CFS Achievement***

*B.2.1. Generation to Receive Full, Partial, or No CFS Credit*

The Commission has not directly addressed the CFS eligibility of all resources and will determine the final eligibility status of all resources in Docket No. E-999/CI-24-352. The Department summarizes in Table 1 the eligibility status of the main resources under consideration for CFS eligibility:

**Table 1:** Summary of Power Generation Resources and Their CFS and RES Eligibility

<b>Resource</b>	<b>CFS Eligible</b>	<b>RES/EETS Eligible</b>
Solar	Eligible	Eligible
Wind	Eligible	Eligible
Hydropower <sup>47</sup>	Eligible	Eligible
Waste Biomass <sup>48</sup>	Partial/Full: TBD in Docket No. 24-352	Eligible
Refuse-derived fuel <sup>49</sup>	Partial/Full: TBD in Docket No. 24-352	Eligible
Primary Biomass <sup>50</sup>	Partial/Full: TBD in Docket No. 24-352	Not Eligible
Geothermal	Likely Eligible: TBD in Docket No. 24-352	Not Eligible
Nuclear	Eligible	Not Eligible
Hydrogen	Not Eligible to Full: TBD in Docket No. 24-352	Partially Eligible <sup>51</sup>
Coal	Not Eligible	Not Eligible
Natural Gas	Not Eligible	Not Eligible
Oil	Not Eligible	Not Eligible
Coal, Natural Gas, or Oil with Carbon Capture and Storage	Partially Eligible	Not Eligible
Energy Storage	Exempt/Partial/Full: TBD in Docket No. 24-352	Not Eligible
Co-Firing	Partial: TBD in Docket No. 24-352	Not Eligible

All of the fully eligible resources will receive one EAC per MWh of electricity generated by the resource. Decisions are still pending in Docket No. E-999/CI-24-352 for the resources identified above.

*B.2.2. Reporting Mechanism*

As discussed in Section III.B.1, the Department's preference is to retain the existing REC reporting structure to the greatest extent practicable, while modifying the structure to allow for new proposed reporting requirements such as sales and purchases of EACs, hourly EAC matching, and the non-issuance of multiple EACs, as well as partial compliance reporting.

The Commission's Order Point 7 in its December 6, 2023 Order provided guidance for the implementation of reporting, which stated:

---

<sup>47</sup> Hydroelectric with a capacity of: (i) less than 100 megawatts; or (ii) 100 megawatts or more, provided that the facility is in operation as of February 8, 2023. As defined by Minn. Stat. § 216B.1691 subd. 1(c)(3)

<sup>48</sup> Landfill gas, anaerobic digestion, wastewater. As defined by Minn. Stat. § 216B.1691 subd. 1(c)(5).

<sup>49</sup> Municipal solid waste as a fuel source. As defined by Minn. Stat. § 216B.1691 subd. 1(c)(5).

<sup>50</sup> Fuel crops such as ethanol, non-waste forest products, or any other biomass source utilized directly for electricity production.

<sup>51</sup> Eligible when generated from solar, wind, hydropower, waste biomass, or refuse-derived fuel.

The Commission delegates authority to the Executive Secretary to work with the Department of Commerce and other utilities to incorporate new reporting required by H.F. 7 into the current reporting template.<sup>52</sup>

The Department has discussed development of the new reporting template with Commission staff; however, the final template will not be complete until after the Commission issues its order in Docket No. E-999/CI-24-352 and determines the final reporting requirements for all eligible resources.

While the Commission has not explicitly designated the annual E999/PR-YR-12 REC Retirement Docket by order to be the venue to report CFS compliance, the Department understands the above referenced Order Point 7 to make this determination. Therefore, the Department expects that future CFS compliance filings will be made in the annual E999/PR-YR-12 REC Retirement Docket.

#### *B.2.3. Determination of CFS Achievement*

The Department does not see a need for the Commission to order any additional requirements to determine that an electric utility is in compliance with the CFS. The existing reporting structure used to determine RES and SES compliance is sufficient to be adapted for the determination of CFS compliance.

#### *B.2.4. Determination of Hourly Matching Achievement*

Should the Commission decide to implement any form of the Department's recommendation for hourly matching, the Commission should also consider an order regarding the determination of how the hourly matching component of CFS compliance has been achieved.

As proposed, the Department recommends a staggered implementation schedule, whereby the CFS standards for annual retail sales occur five years before the hourly requirement for that standard begins. The Department's recommended year to begin hourly matching is 2035, wherein electric utilities will be required to retire EACs to match 90% of their annual retail sales, of which 80% of the annual retail sales must be matched with hourly EACs.

When the hourly matching requirement begins, electric utilities will need to submit proof of hourly matching compliance for all 8,760 hours in each reporting year. Until 2045, electric utilities will be allowed to match only a percentage of the total hours required for hourly matching. The simplest way to report hourly matching with an extra allowance is for electric utilities to report all EAC retirements made on an hourly basis, alongside total retail electric sales for that hour. The template would then calculate the number of hours that were matched with EACs, and would also report the total number of EACs to determine if the annual matching component was achieved. The reporting of net EAC imports and exports would not be used to determine hourly EAC achievement.

***The Department recommends that the Commission order that hourly matching achievement for electric utilities be determined by the calculation of the total number of hours for which total retail electric sales are matched by EACs, as compared to the hourly matching standard for that year.***

#### *B.2.5. Auditing of Reporting*

---

<sup>52</sup> December 6, 2023 Order at 9.

The implementation of the CFS will require electric utilities to increase the complexity of the current reporting requirements that electric utilities report in E999/PR-YR-12. Electric utilities will be guaranteed to retire RECs to fulfill at minimum, their RES, SES, and DSES requirements in addition to the retirement to fulfill the CFS from the same RECs. Electric utilities will need to report the retirement of more EACs than ever before, with more standards to fulfill from more sources of power generation and EAC purchases. All of these requirements subject electric utilities to an increased risk of noncompliance due to the administrative complexity of reporting to meet multiple competing standards. The Department does not conclude that compliance under all of the new and existing standards is not feasible, but rather that there should be appropriate auditing of reports to ensure the accuracy of reporting.

The Department does not know the scope or timing for an auditing process, and therefore:

***The Department recommends that the Commission order auditing of all CFS compliance reports during the preparedness period, as well as the 2030 report to establish the need for further auditing in subsequent years.***

### *B.3. Criteria and Standards for Reliability Impacts*

Grid reliability is not optional, and the passage of H.F. 7 will have no impact on grid reliability. Electric utilities will be subject to the same reliability requirements that were required before the passage of H.F. 7, including the requirements stipulated by Minn. R. 7826.0500 – 0700 and the Commission’s resource planning process. The CFS is anticipated to result in a greater need for capacity, particularly because it will trigger additions of wind and solar that will lose capacity accreditation with the transition to the Direct Loss of Load (DLOL) used to calculate the Local Reliability Requirement (LRR) by MISO, as illustrated in Figure 2 below.

**Figure 2:** Comparison of Current MISO Capacity Accreditation to the Proposed DLOL That Will be Implemented During the CFS Compliance Timeline

PY23-24	Summer		Fall		Winter		Spring	
Resource Class	Current*	Proposed	Current	Proposed	Current	Proposed	Current	Proposed
Gas	90%	88%	84%	88%	79%	66%	84%	69%
Combined Cycle	91%	90%	94%	89%	90%	74%	92%	75%
Coal	92%	91%	91%	88%	90%	73%	89%	74%
Hydro	96%	96%	94%	96%	93%	92%	97%	88%
Nuclear	95%	90%	96%	85%	95%	86%	92%	80%
Pumped Storage	99%	98%	91%	98%	94%	50%	89%	67%
Storage	95%	94%	95%	93%	95%	91%	95%	95%
Solar	45%	36%	25%	31%	6%	2%	15%	18%
Wind	18%	11%	23%	15%	40%	16%	23%	16%
Run-of-River	100%	100%	100%	100%	100%	100%	100%	100%

Source: MISO<sup>53</sup>

The change to MISO's capacity accreditation will include a need for more summer and winter capacity generally but the effects will be strongest for utilities with more wind and solar in their portfolio.<sup>54</sup> The 55% RES goal by 2035, combined with the fact that wind and solar tend to be least cost compliance additions, ensures that a significant share of each electric utility's energy supply will come from resources that will lose summer and winter capacity accreditation by the 2028/2029 MISO capacity auction.<sup>55</sup> The specific capacity types to be added will be determined in resource planning. This potential need for capacity additions beyond those directly needed for the RES is the main reason why the Department advocates to track CFS gaps in generation to understand how much additional CFS-ineligible generation is dispatched by MISO to meet capacity needs.

Reliability planning is primarily performed in IRPs. As discussed above, the only difference induced by H.F. 7 is the additional need for capacity with a higher share of renewable generation. For electric utilities that are required to submit IRPs, these capacity needs will be planned in IRPs. Reliability requirements will similarly not change for electric utilities that do not submit IRPs. Based on the above analysis, the Department does not see a need for the Commission to set any new standards or criteria to meet reliability needs.

#### *B.4. Criteria and Standards for Economic Impacts*

The Department notes that the Commission has a final comment process scheduled after the completion of the current proceeding to discuss the "Off Ramp Process,"<sup>56</sup> which allows the Commission to "Modify or Delay" a standard under Minn. Stat. § 216B.1691 subd 2b. This next proceeding will relate to the "Commission's March 19, 2010 Order in Docket No. E999/CI-03-869," which discussed both the measurement of compliance,<sup>57</sup> as well as the modification or delay of standards.<sup>58</sup>

##### *B.4.1. General Standards*

Economic impacts of the CFS will be studied in an electric utility's IRP. Minn. Stat. § 216B.2422 subd. 3 requires the Commission to consider environmental costs when approving an IRP. The statute states:

(a) The commission shall, to the extent practicable, quantify and establish a range of environmental costs associated with each method of electricity generation. A utility shall use the values established by the commission in conjunction with other external factors, including socioeconomic costs, when evaluating and selecting resource options in all proceedings before

<sup>58</sup> See Issue 3). March 19, 2010 Order at 2.

the commission, including resource plan and certificate of need proceedings.

(b) The commission shall provisionally adopt and apply the draft cost of greenhouse gas emissions valuations presented in the United States Environmental Protection Agency's EPA External Review Draft of Report on the Social Cost of Greenhouse Gases: Estimates Incorporating Recent Scientific Advances, released in September 2022, including the time horizon, global estimates of damages, and the full range of discount rates from 2.5 to 1.5 percent, with two percent as the central estimate. The commission shall adopt the estimates contained in the final version of the external review draft report when it becomes available.

In addition to societal costs, an IRP petition will also present the revenue requirements to understand the ratepayer impacts of different resource mixes. With requirement to reach 100% carbon-free electricity, there are significant potential ratepayer risks to reach this standard. Potential technologies to reach 100% carbon-free electricity include short- and long-duration energy storage, carbon capture and storage, and hydrogen. Both hydrogen and carbon capture and storage unambiguously add additional costs compared to bulk power generation from renewables or nuclear and unabated fossil fuel generation, respectively. Short- and long-duration energy storage have more complex cost recovery potential, but also pose risks to increase ratepayer costs.

The risk for increased costs should not be managed differently from that of existing practice. As described in Minn. Stat. § 216B.2422 subd. 3(a) and 3(b), the Social Cost of Greenhouse Gases, socioeconomic costs, and other external factors should be considered as part of the decision to approve a resource plan. However, given that the potential cost of a solution may not outweigh the risk, it is important to consider whether a given resource mix provides a higher benefit than any increased cost. In this regard, a comparison of the societal costs to the revenue requirement of any given scenario should yield a higher result as compared to the difference in revenue requirement between a CFS-eligible and a CFS-ineligible resource. While the Department does not argue that this equation should be the only consideration for a request to modify or delay a standard, it should form the basis to consider such a request. The Department concludes that a Commission order is not necessary, as the Department's recommendation is not a deviation from standard practice.

#### *B.4.2. Hourly Standards*

The Department acknowledges that a Commission order to implement hourly matching may increase ratepayer costs. When electric utility-owned or operated generation is unable to match retail sales with EACs, the utilities will have to purchase EACs on the market. As renewable resources become a larger share of MISO's fuel mix, times of low EAC generation may be coincident with more systematic shortages of EAC generation, and therefore prices may spike during these times. While the Department desires to incentivize utilities to continue to match hourly retail sales during times of higher prices in order to meet the recommended hourly matching standard, it is equally important not to subject ratepayers to undue financial burden.

The Department intends to present criteria and standards for the off-ramp process in Comment Round 4 that implement ratepayer protections, such that ratepayers are not required to pay for EACs during times of abnormally high prices, including the provenance of the EAC.

*B.5. Criteria and Standards for Technical Feasibility*

The Department concludes that criteria and standards regarding technical feasibility are appropriately addressed by Minn. Stat. § 216B.1691 subd. 2b and Minn. Stat. § 216B.2422. The existing integrated resource planning process is sufficient to address any issues pertaining to technical feasibility, and does not require any Commission order.

*B.6. Criteria and Standards for Partial Compliance*

The Department recommends that criteria and standards related to partial compliance should be determined in Docket No. E-999/CI-24-352. The necessary eligibility and calculation determinations for certain resources including hydrogen and biomass will greatly influence the measurement of these resources for CFS compliance and cannot be easily decoupled from pending record development. The reporting structures necessary to determine partial compliance must adapt to Commission orders in Docket No. E-999/CI-24-352. Any attempts to set criteria and standards in this proceeding would preclude intervenors in Docket No. E-999/CI-24-352 from fully discussing the merits of different methodologies for the measurement of partial compliance, particularly in the context of fuel life-cycle assessment. The Department articulates its reasoning for a broad determination to not issue multiple EACs in Section III.B.1.4, however this recommendation in no way limits any decision regarding the eligibility of resources or the quantification of them. This recommendation only pertains to how resources are used to determine CFS compliance.

***The Department recommends that all decisions made regarding criteria and standards to measure a utility's partial compliance with the CFS be made in Docket No. E-999/CI-24-352.***

*C. WHAT CONSIDERATIONS SHOULD THE COMMISSION TAKE INTO ACCOUNT REGARDING THE DOUBLE COUNTING OF RENEWABLE ENERGY CREDITS (RECS) TO MEET MULTIPLE REQUIREMENTS?*

The Department does not believe that special considerations are required to prevent double counting of RECs. For example, the Commission did not order any special accommodations to implement the DSES, which also contained overlapping requirements between the SES, RES, and CFS.<sup>59</sup> For example, M-RETS is also able to track multiple requirements within its system. The implementation of the CFS is materially similar to the implementation of the DSES regarding the double counting of EACs to meet multiple requirements, and therefore the Department does not recommend any Commission orders.

*D. HOW SHOULD NET MARKET PURCHASES BE COUNTED TOWARDS CFS COMPLIANCE?*

---

<sup>59</sup> See Order Point 11 and the omission of any order points regarding double counting. June 26, 2024 Order. *In the Matter of the Implementation of the New Distributed Solar Energy Standard Pursuant to 2023 Amendments to Minnesota Statutes, Section 216B.1691*, Minnesota Public Utilities Commission, Order Clarifying Implementation of Distributed Solar Energy Standard, June 26, 2024, DOCKET NO. E-002,E-015,E-017/CI-23-403, (eDockets) [20246-207978-01](#) at 14.

There are two competing docket topics open for discussion. The first, Notice Topic 4 of the current docket, requests comments on how net market purchases should be counted towards CFS compliance. The second, as outlined in the November 7, 2024 Order, states that the Commission will open comments about “[t]he definition and calculation of net market purchases” in a newly initiated docket (Docket No. E-999/CI-24-252).<sup>60</sup> The November 7, 2024 Order further elaborates:

Pending the outcome of that [Docket No. E-999/CI-24-352] investigation, the Commission will provisionally direct utilities, in their filings under the Carbon-Free Standard and in resource plans under Minn. Stat. § 216B.2422, to do the following:

- Calculate the percentage of carbon-free market purchases on an applicable regional transmission organization subregion—using annual energy fuel mix data—as practicable.
- Calculate the percentage of carbon-free energy, when a utility purchases energy from a specified resource such as in the context of a bilateral contract or power purchase agreement, based on the percentage of carbon-free energy generated by the resource.<sup>61</sup>

The Department notes that the above bullet points are derived from a plain language reading of Minn. Stat. § 216B.1691 subd. 2d.(b)(ii), which requires that the Commission allow CFS partial compliance for:

[A]n electric utility's annual purchases from a regional transmission organization net of the electric utility's sales to the regional transmission organization, but only for the percentage of annual net purchases that is carbon-free, which percentage the commission must calculate based on the regional transmission organization's systemwide annual fuel mix or an applicable subregional fuel mix.

The bifurcation of comment topics regarding the treatment of net market purchases is difficult to parse between the two competing dockets. The Department understands that the current docket should align with the other comment topics, which focus on criteria and standards used for the counting of net market purchases used to determine CFS compliance. However, there are overlapping topics between these dockets. The Department presents the subjects open for discussion of each topic in Table 2 below.

**Table 2:** Comparison of Net Market Purchases Comment Topics

	Docket No. E-999/CI-23-151	Docket No. E-999/CI-24-352
Comment Topic	How should net market purchases be counted towards CFS compliance?	The definition and calculation of net market purchases.
Reporting system for quantification	✓	X

<sup>60</sup> November 7, 2024 Order at 5-6.

<sup>61</sup> *Id.*, at 7.

Reporting Ledger/Template	✓	✓
Criteria/Standards for resource eligibility	✓	✓
Criteria/Standards for time boundaries	✓	✓
Venue of quantification	✓	✓
Issuance of EACs	✓	X
Definition of when net market purchases occur	X	✓
Delineation of the relationship of imports and exports to net market purchases	X	✓

While it is possible to separate certain comment topics from each other, in practice the discussion about criteria and standards for the eligibility and measurement of different resources could be decided in either docket. Should these decisions be made in the current docket, similar to setting criteria and standards for partial compliance, it may again limit decisions to be made in Docket No. E-999/CI-24-352 before proper record development can take place on the more detailed analysis of how market purchases are quantified.

***The Department recommends that all decisions made regarding criteria and standards to measure a utility's net market purchases be made in Docket No. E-999/CI-24-352.***

With this recommendation, the Department aims to have a singular discussion about the implementation of net market purchases in Docket No. E-999/CI-24-352, with one exception.

Minn. Stat. § 216B.1691, subd. 2d.(b)(ii), when read in conjunction with other provisions of Minn. Stat. § 216B.1691, creates the possibility of double counting if not addressed by the Commission. Under Minn. Stat. § 216B.1691, subd. 2d.(b)(ii), electric utilities would report the equivalent of CFS credit retirement for CFS credits that were not purchased by the electric utility. In reality, all CFS credits have value, and will be sold to an entity that desires to claim the credit. If a utility claims partial compliance based on physical power purchases pursuant to Minn. Stat. § 216B.1691, subd. 2d.(b)(ii), but does not purchase the associated EACs, and a different utility purchases the EACs and claims compliance based on the EACs under Minn. Stat. § 216B.1691, subd. 4, it would be double counting. The entire implementation of Minn. Stat. § 216B.1691 relies on the retirement of CFS credits and not physical power purchases to establish CFS compliance. The Commission should not abandon this foundational principle of the statute to implement a second requirement that contains a conflict.

Instead, the Department recommends a solution to the problem. It is common practice for the Commission to approve resource plans that reduce electric utilities' reliance upon the MISO market, and therefore net market purchases are discouraged. Therefore, it may not be necessary in some cases for an electric utility to demonstrate CFS compliance with the fraction of its energy mix that is derived from net market purchases. If an electric utility does require net market purchases to demonstrate its CFS compliance, regardless of whether implemented as hourly or annually, the electric utility must purchase EACs equivalent to the carbon-free share of its net market purchases in order to claim the

credit. As the electric market is constantly in flux, electric utilities may not know the exact “systemwide annual fuel mix or an applicable subregional fuel mix” in the reporting year, nor know if net market purchases occurred until the generation year is over. In any event, just purchasing physical energy via MISO’s energy market does not necessarily mean the utility has also purchased the renewable or environmental attributes. For this reason, electric utilities should instead be allowed to purchase EACs in the following generation year to make up for any gaps in the prior year.

***The Department recommends that the Commission order:***

- A. Net market purchases shall only be quantified for CFS compliance when the carbon-free share of the systemwide annual fuel mix or an applicable subregional fuel mix is necessary to demonstrate CFS compliance.***
- B. EACs must be purchased in the subsequent reporting year for the carbon-free share of the systemwide annual fuel mix or an applicable subregional fuel mix that is necessary to demonstrate CFS compliance.***

The above recommendation is statutorily permissible because it allows for partial compliance with the CFS from net market purchases as required by Minn. Stat. § 216B.1691, subd. 2d(b)(ii), but clarifies that the Commission is not required to quantify net market purchases unless a utility is relying on net market purchases to demonstrate CFS compliance. Additionally, Minn. Stat. § 216B.1691, subd. 2d, gives the Commission the authority to establish criteria and standards by which to measure compliance. The Commission can and should use that authority to harmonize the various compliance methods and ensure that double counting does not occur.

Finally, the Department notes that there is a second, smaller issue concerning double counting of net market purchases that should be considered. Every electric utility participates in the “systemwide annual fuel mix or an applicable subregional fuel mix” market, whether it be the whole of MISO or a smaller subset. Therefore, if an electric utility claims net market purchases of the fuel mix for CFS compliance, it would be claiming a fraction of its own carbon-free generation, unless this generation is subtracted from the fuel mix. While this issue will be discussed in Docket No. E-999/CI-24-352, the proposed Commission order above would also negate this double counting concern as well.

***E. ARE THERE OTHER ISSUES OR CONCERNS RELATED TO THIS MATTER?***

The Department notes that its recommendations made in sections B.1.2.4 *Status of EAC Markets* and B.2.5 *Auditing of Reporting* both potentially require external resources to provide technical solutions that may be beyond those currently available to the Department. The Department makes two separate recommendations that would help facilitate each recommendation independently.

***The Department recommends that the Commission order the Commissioner of Commerce to seek authority from the Commissioner of Management and Budget to incur costs for specialty services to provide reports on the status of EAC markets and to propose a suite of solutions that would facilitate hourly EAC trading for electric utilities.***

***The Department recommends that the Commission order the Commissioner of Commerce to seek authority from the Commissioner of Management and Budget to incur costs for specialty services to provide auditing of all CFS reports for up to three years.***

#### **IV. DEPARTMENT RECOMMENDATIONS**

Based on analysis of Minn. Stat. § 216B.1691 and the information in the record, the Department has prepared recommendations, which are provided below. The recommendations correspond to the subheadings of Section III above.

**A. WHEN AND HOW SHOULD UTILITIES REPORT PREPAREDNESS FOR MEETING UPCOMING CFS REQUIREMENTS?**

- A.1. The Department recommends that the Commission order electric utilities to begin to report CFS compliance in 2029 for generation year 2028.
- A.2. The Department recommends that any decisions regarding modifications to the existing REC tracking system be made in Docket No. E-999/CI-24-352.

**B. BY WHICH CRITERIA AND STANDARDS SHOULD THE COMMISSION MEASURE AN ELECTRIC UTILITY'S COMPLIANCE WITH THE CFS?**

- B.1.1.1. The Department recommends that the Commission order electric utilities to all report sales and purchases of EACs at the time interval required for CFS matching.
- B.1.1.2 The Department recommends that the Commission order electric utilities to all report hourly Minnesota retail electric sales.
- B.1.2.1.1. The Department recommends that the Commission order hourly matching for CFS compliance for electric all electric utilities.
- B.1.2.1.2. The Department recommends that the Commission rescind its order points 1 and 3 from its December 18, 2007 Order in Docket Nos. E-999/CI-04-1616 and E999/CI-03-869 and modify order point 6 of the Commission's December 6, 2023 Order in Docket E-999/CI-23-151 to remove "All renewable energy credits generated from such facilities will be eligible for use in the year of generation and for four years following the year of generation." These orders will be rescinded/modified effective January 1, 2030.
- B.1.2.2. The Department recommends that the Commission order the following total retail electric sales matching requirements for electric utilities by the end of the year indicated:
  - 2030: Annual matching of 80 percent for public utilities; 60 percent for other electric utilities
  - 2035: Hourly matching of 80 percent for public utilities; 60 percent for other electric utilities
  - 2040: Hourly matching of 90 percent for all electric utilities
  - 2045: Hourly matching of 100 percent for all electric utilities.

- B.1.2.3. The Department recommends that the Commission order all integrated resource plans where the utility uses a capacity expansion model to incorporate hourly matching constraints in the models to demonstrate CFS compliance.
  - B.1.2.4.1. The Department recommends that the Commission order the Department to submit an annual compliance report that outlines the status of EAC markets and provides potential options to implement hourly EAC trading for electric utilities.
  - B.1.2.4.2 The Department recommends the Commission order that a new docket be opened in 2029, which shall determine the requirements necessary to facilitate the sales and purchases of hourly EACs.
  - B.1.3. The Department recommends that the Commission order that all EACs retired to demonstrate CFS compliance be generated within the Midwest Region, as defined by 26 CFR Ch. I, Sch. A, § 1.45V-4 Paragraph (d)(2)(ix), or meet the 45V requirements for interregional delivery, as defined by 26 CFR Ch. I, Sch. A, § 1.45V-4 Paragraph (d)(3)(iii)(B).
  - B.1.4. The Department recommends that the Commission order EACs to only be issued in quantities of 0-1 EAC per megawatt-hour.
  - B.2.4. The Department recommends that the Commission order that hourly matching achievement for electric utilities be determined by the calculation of the total number of hours for which total retail electric sales are matched by EACs, as compared to the hourly matching standard for that year.
  - B.6. The Department recommends that all decisions made regarding criteria and standards to measure a utility's partial compliance with the CFS be made in Docket No. E-999/CI-24-352.
- C. *WHAT CONSIDERATIONS SHOULD THE COMMISSION TAKE INTO ACCOUNT REGARDING THE DOUBLE COUNTING OF RENEWABLE ENERGY CREDITS (RECS) TO MEET MULTIPLE REQUIREMENTS?*
- None.
- D. *HOW SHOULD NET MARKET PURCHASES BE COUNTED TOWARDS CFS COMPLIANCE?*
- D.1. The Department recommends that all decisions made regarding criteria and standards to measure a utility's net market purchases be made in Docket No. E-999/CI-24-352.
  - D.2. The Department recommends that the Commission order:
    - Net market purchases shall only be quantified for CFS compliance when the carbon-free share of the systemwide annual fuel mix or an applicable subregional fuel mix is necessary to demonstrate CFS compliance.
    - EACs must be purchased in the subsequent reporting year for the carbon-free share of the systemwide annual fuel mix or an applicable subregional fuel mix that is necessary to demonstrate CFS compliance.

*E. ARE THERE OTHER ISSUES OR CONCERNS RELATED TO THIS MATTER?*

- E.1. The Department recommends that the Commission order the Commissioner of Commerce to seek authority from the Commissioner of Management and Budget to incur costs for specialty services to provide reports on the status of EAC markets and to propose a suite of solutions that would facilitate hourly EAC trading for electric utilities.
- E.2 The Department recommends that the Commission order the Commissioner of Commerce to seek authority from the Commissioner of Management and Budget to incur costs for specialty services to provide auditing of all CFS reports for up to three years
