Hello- I have a public comment to make about the Site Permit Amendment for Nobles Wind Farm PUC Docket Numbers IP-6646/WS-09-584.

Potential Human/Environmental Impacts: The amendments proposed are not good for the residents of the area. The longer blades will create additional flicker which are very annoying and perhaps with the larger blades may flicker on people's homes and the roads. It is very distracting to have this flicker/flash in the area.

I don't understand what the grant waivers for the wind access buffer setbacks may be so would appreciate additional information on this amendment.

Decreasing the boundaries will affect the payments to the landowners which is not right. People have been told they will receive the payments by the wind turbine owners and reducing the boundary is not the right thing to have happen.

Please look out for the people who have to look at these turbines and deal with the aftermath of their construction every day.

Thank you - Judy Christians, Wilmont, MN
