**Re: Supplement to the Request for Minor Alteration (Minnesota Rule 7850.4800) –
Associated Facilities
Minnesota – Iowa 345 kV Transmission Project and Associated Facilities in Jackson,
Martin, and Faribault Counties
Docket No. ET6675/TL-12-1337**

Dear Mr. Wolf,

On November 25, 2014, the Minnesota Public Utilities Commission (“Commission”) issued a Route Permit for ITC Midwest LLC (“ITC Midwest”) to construct the Minnesota – Iowa 345 kV Transmission Project and Associated Facilities in Jackson, Martin, and Faribault Counties. On June 27, 2016, ITC Midwest filed a request with the Commission for approval of a minor alteration for the Associated Facilities around the Winnebago Junction Substation. ITC Midwest requested the minor alteration to provide sufficient route width to accommodate configuration of the Associated Facilities in a way that would allow for the Winnebago Junction Substation to remain energized throughout construction.

ITC Midwest is filing this letter to correct an error identified in Table 1 of Attachment 1 to the minor alteration request. Table 1 correctly reports that the total length of the circuits included in the minor alteration request is 2,266 feet. Table 1, however, incorrectly reports the division of single-circuit and double-circuit line.

The length calculation in Table 1 of Attachment 1 incorrectly identified the line that runs northeast from Structure 1-1 as a double-circuit line; it is, in fact, the single-circuit N.B.E.I. 161 kV transmission line.¹ The double-circuit portion of the minor alteration begins at Structure 1-1 where the N.B.E.I. 161 kV transmission line and the Winnebago Local 69 kV transmission line begin co-location and continues south to Structure 1-2 and on to the Huntley Substation within the already-permitted route width. Despite this error in allocating the length to single- and double-circuit configurations, all resource calculations for the Table 2 and Table 3 evaluations are correct. Table 1 also did not clarify that the total length of the circuits included in the minor alteration also included a small portion of the P&P Alignment² just south of Structure 1-2, until the P&P Alignment rejoins the PUC RP Anticipated Alignment,³ as shown on the detailed map included with the minor alteration request filing as Attachment 2, page 2. The corrected Table 1 is provided below.

Structures Identifying Beginning and End of the Segment for the Change Requests	Distance Between Structure that Mark the End Points of the Segment	How Many Landowners are Affected	Describe the Requested Change and the Reason for the Change
<p>North of US Highway 169 to South of the Winnebago Junction Substation</p> <p>Beginning: 1-Walters, 1-14, and 2-1 End: 1-2 and 2-2 <u>and south of 1-2 to where it joins the PUC RP Route Permit Anticipated Alignment</u></p>	<p>2,266 feet</p> <p>Double-circuit: 1,096 <u>996</u> feet</p> <p>Single-circuit: 1,170 <u>1,270</u> feet</p>	<p>4 parcels, 4 landowners</p>	<p>The change is requested to ensure that the Winnebago Junction Substation and associated transmission lines can remain energized while the Associated Facilities circuits and Huntley Substation are constructed.</p>

In addition, ITC Midwest did not note in its original filing that the blue hashed area shown in Attachment 2 that lies outside the PUC RP Anticipated Right-of-Way⁵ (the Route Width being requested as part of the minor alteration, which is confined to the necessary right-of-way and vegetation management zones for the Associated Facilities transmission lines) is 6.7 acres.

¹ This error does not change the total line length provided in Table 2 or the data upon which any Table 2 calculations were based upon.

² Term refers to the naming provided in the legend of Attachment 2 to the June 27, 2016 minor alteration request.

³ Term refers to the naming provided in the legend of Attachment 2 to the June 27, 2016 minor alteration request.

⁴ Although Attachment 2 (pages 1 and 2) identify the yellow line as the “P&P Alignment” it is important to note that the P&P Alignment that extends from the existing Winnebago Local 69 kV alignment to Structure 1-1 will be constructed to 69 kV standards and operated at 69 kV and is not included in this minor alteration request.

⁵ Term refers to the naming provided in the legend of Attachment 2 to the June 27, 2016 minor alteration request.

Mr. Daniel P. Wolf
