The first time I received a notice saying my service will be subject to disconnection in my lifetime. The cost was nearly half of what I make in a month as an educator. I have to choose if the money goes toward supporting my four children needs or pay the electricity. I do not qualify for assistance as three of my daughters are in college and no father support is given. Not Looking forward to a dark future with cold running water. Help is needed!

What impact did the cold weather in January and February 2019 have on utility operations and service?

Were there lessons learned from this severe weather event that can be used to keep utility systems operating reliably and safely under extreme, challenging circumstances in the future?
