Docket No. IP-7045/CN-20-856

In the Matter of the Application of Andyville Solar Project, LLC for a Certificate of Need for the up to 100 MW Andyville Solar Project in Mower County, Minnesota.

REQUEST FOR EXEMPTION FROM CERTAIN APPLICATION CONTENT REQUIREMENTS

I. INTRODUCTION

Andyville Solar, LLC ("Andyville") plans to file an Application for a Certificate of Need ("CN") pursuant to Minn. Stat. § 216B.243 and Minn. R. Ch. 7849 to construct and operate the Andyville Solar Project, an up to 100 megawatt ("MW") photovoltaic ("PV") solar-energy generating system at a single site in Mower County, Minnesota (the "Project"). The Project is a large energy facility ("LEF") as defined in Minn. Stat. § 216B.2421, subd. 2(1) and a large electric generating facility ("LEGF") as defined in Minn. R. 7849.0010, Subp. 13.1

Andyville respectfully requests that the Minnesota Public Utilities Commission (the "Commission") grant it exemptions from certain CN data requirements that are inapplicable and unnecessary to determine need for the Project.

¹ Andyville also plans to file a large electric power generating plant site permit application and a route permit application for the Project in separate dockets.

II. PROJECT DESCRIPTION

Andyville is an independent power producer that proposes to construct and operate the Project within Mower County, Minnesota. The power generated by the Project will be offered for sale to wholesale customers, including Minnesota utilities and cooperatives that have identified a need for additional renewable energy and commercial and industrial customers that have set clean energy goals.

The Project will be in Mower County and the Project's footprint spans approximately 1,000 acres in Austin Township. Andyville is proposing to utilize panels affixed to tracking mechanisms that would allow the panels to "track" the sun from East to West on a daily basis. In addition to PV panels, the Project will consist of an electrical collection system, inverters, racking, fencing, access roads, an operation and maintenance building, substation facility, underground electrical collection system, up to two weather stations, and other infrastructure typical of a PV solar-energy generating system. The Project proposed to interconnect to the existing Austin North substation in Mower County, Minnesota.

Andyville plans to construct the Project on a schedule that facilitates an in-serve date in 2023.

III. EXEMPTION REQUESTS

Minnesota Rules Chapter 7849 sets forth the data an applicant must provide in an application for a CN for a large energy facility. An applicant may be exempted from providing certain information if the applicant requests an exemption in a writing that shows that the data requirement is either unnecessary to determine the need for the proposed facility or may be satisfied by submitting another document. Minn. R. 7849.0200, subp. 6.

Andyville seeks exemptions from certain data requirements that are specific to the operation and regulation of facilities proposed by utilities. For example, Andyville seeks

exemptions from data requirements that pertain to a utility's "system," *i.e.*, "the service area where the utility's ultimate consumers are located" and the facilities used to generate, transmit, and distribute electricity to that service area. *See* Minn. R. 7849.0010, subp. 29. Given that independent power producers, such as Andyville, do not have an assigned service area or a "system," the Commission has held that data requirements seeking system-related information are unnecessary to determine need in such cases.²

The Project will produce renewable energy that will be purchased by electric utilities or other entities to satisfy renewable energy standards, such as the Minnesota Solar Energy Standard under Minn. Stat. § 216B.1691 (the "SES") or other clean energy standards and sustainability goals. Given this purpose, Andyville requests partial exemptions from data requirements seeking information on alternatives to the Project that would not satisfy the SES or similar standard.

As detailed below, where applicable, Andyville will provide alternative information relevant to the determination of need for the Project. The exemptions Andyville requests are consistent with the relief the Commission has previously granted to other independent power producers.³

Andyville requests exemptions from the following data requirements:

A. Minnesota Rule 7849.0240, subp. 2(B): Promotional Activities

This rule requires each LEGF CN application to contain "an explanation of the relationship of the proposed facility to . . . promotional activities that may have given rise to the demand for the facility." In the past, "the Commission has granted this exemption to other [independent power producers] because these companies do not have captive retail customers and there is no authorized

rate of return to consider."⁴ Andyville has not engaged in promotional activities that could have given rise to the need for the electricity the Project will generate. Andyville has also not secured a purchaser for the output of the Project. Thus, information related to promotional activities is non-existent, and, as the Commission has previously determined, an exemption is appropriate.

B. Minnesota Rule 7849.0250(B): Description of Certain Alternatives

Minnesota Rule 7849.0250(B) requires an applicant to discuss the availability of alternatives to the facility, including: (1) purchased power; (2) increased efficiency of existing facilities, including transmission lines; (3) new transmission lines; (4) new generating facilities of a different size or using a different energy source; and (5) any reasonably combination of alternatives listed in subparts (1) to (4).

Andyville requests an exemption from data requirements (1), (2), (3), and (5) because they are not applicable to Andyville or the Project. Additionally, Andyville requests a partial exemption of requirement (4) and proposes that it only discuss those alternative generating facilities that are of the same size as the Project and that use a renewable energy source.

Regarding the alternative of purchased power (1), Andyville, as an independent power producer, does not purchase power; rather, Andyville intends to sell power to utilities or other potential off-takers. With respect to the alternative of increased efficiency (2), Andyville has no existing facilities in Minnesota for which it might seek improved operating efficiency. Regarding the alternative of new transmission lines (3), Andyville has no plans to become involved in owning or operating transmission lines beyond what could be needed for interconnection of the Project. The development, construction, and operation of transmission and distribution lines designed to deliver power to end use customers will be left to utilities with defined service area obligations to

⁴ Blazing Star Exemption Order, Recommendations of the Department of Commerce at 3.

retail customers. Andyville has no plans to own or operate such transmission lines and, therefore, requests an exemption from this requirement.

With respect to data requirement (4), Andyville requests a partial exemption. The Project is specifically designed to offer for purchase on the wholesale market electricity generated by a resource that will count toward satisfying the purchasing utilities' or other entities' renewable or clean energy standards, policies, or goals. Given this purpose, only renewable energy sources are alternatives to the Project.⁵ Andyville therefore requests that it be exempted from discussing any alternative generating facilities of a different size or using an energy source other than renewable alternatives.⁶

C. Minnesota Rule 7849.0250(C)(1)–(9): Details Regarding Alternatives

Andyville requests a partial exemption from this Rule, which requires a discussion of various details regarding both the Project and each of the alternatives discussed in response to Minn. R. 7849.0250(B). Because Andyville is requesting a partial exemption from the data requirements in Minn. R. 7849.0250(B)—*i.e.*, limiting its discussion to only renewable alternatives—Andyville also proposes to limit its response to this data requirement to only those renewable alternatives discussed in response to Minn. R. 7849.0250(B)(4) that could provide electric power at the asserted level of need.⁷

D. Minnesota Rule 7849.0250(C)(7): Effect of Project on Rates Systemwide

Minn. R. 7849.0250(C)(7) requires an applicant to estimate its proposed project's "effect on rates systemwide and in Minnesota, assuming a test year beginning with the proposed in-service date." Andyville requests an exemption from this requirement because it does not have a "system"

⁵ See, e.g., Blazing Star Exemption Order at 1; Elm Creek Exemption Order at 4.

⁶ See, e.g., Elk Creek Exemption Order at 2; Dodge county Wind Exemption Order at 1; Blazing Star Exemption Order at 1.

⁷ See id.

as defined by the Rules and it is not a utility with retail rates for the power it plans to generate. As such, the data are neither available to Andyville nor necessary to determine need for the Project. Instead, Andyville proposes to submit data on the Project's impact on state or regional wholesale prices.⁸

E. Minnesota Rule 7849.0250(D): Map of Applicant's System

Minn. R. 7849.0250(D) requires the applicant to include a map showing the applicant's system. This information does not exist and is not relevant to the determination of need for the Project. Instead, Andyville proposes to submit a map showing the proposed site of the Project and its location relative to the power grid, consistent with prior Commission decisions.⁹

F. Minnesota Rule 7849.0270: Peak Demand and Annual Consumption Forecast

Minn. R. 7849.0270 requires the applicant to provide "data concerning peak demand and annual electrical consumption within the applicant's service area and system." Andyville does not have a "service area" or "system" and, as such, the requested data are inapplicable. Moreover, Andyville has not yet secured a purchaser for the output from the Project and cannot provide equivalent information regarding the service area and system of the purchaser. Given that Andyville does not yet know who the buyer or buyers will be, Andyville cannot reasonably forecast peak demand for those buyers' service areas and systems, and therefore requests an exemption from this requirement. As an alternative, consistent with prior Commission decisions, Andyville proposes to submit regional demand, consumption, and capacity data from credible sources to demonstrate the need for the independently produced renewable energy that will be generated by the Project. 10

⁸ See Plum Creek Exemption Order at 4.

⁹ See Elk Creek Exemption Order at 2; Dodge County Wind Exemption Order at 1; Blazing Star Exemption Order at 1.

¹⁰ Blazing Star Exemption Order at 1.

G. Minnesota Rule 7849.0280: System Capacity

Minn. R. 7849.0280 requires the applicant to "describe the ability of its existing system to meet the demand for electrical energy forecasted in response to part 7849.0270, and the extent to which the proposed facility will increase this capability." Andyville does not have a "system" as defined by the Rules and has not yet secured a purchaser for the Project's output. Andyville proposes to submit regional demand, consumption, and capacity data from credible sources to demonstrate the need for the independently produced renewable energy that will be generated by the Project.

H. Minnesota Rule 7849.0290: Conservation Programs

Minn. R. 7849.0290 requires an applicant to describe its energy and conservation plans, including load management, and the effect of conservation in reducing the applicant's need for new generation and transmission facilities.

The Commission has previously determined that this Rule is "designed to ensure that regulated utilities, providing essential services to captive customers, give conservation the same careful consideration they give to new generation in planning to meet the future needs of their service areas." Different considerations apply in the wholesale context and thus the requirements of Minn. R. 7849.0290 are "onerous and essentially unhelpful" to the Commission's determination. Because Andyville is not a regulated utility, has no retail customers, and plans to sell the Project's output on the wholesale market, it requests an exemption from this requirement in its entirety.

¹¹ Dodge County Wind Exemption Order at 1.

¹² Rapids Power Exemption Order at 6.

I. Minnesota Rule 7849.0300: Consequences of Delay

Minn. R. 7849.0300 requires the applicant to discuss the "anticipated consequences to its system, neighboring systems, and the power pool should the proposed facility be delayed one, two, and three years, or postponed indefinitely." Andyville is not a utility and has no "system." Thus, this data requirement is inapplicable to Andyville and is unnecessary to determine the need for the proposed Project. Instead, Andyville proposes to submit data on the consequences of delay to its potential customers and the region.

J. Minnesota Rule 7849.0330: Transmission Facilities

Minn. R. 7849.0330 requires the applicant to provide certain data for each alternative that would involve construction of a large high voltage transmission line ("LHVTL"). Transmission facilities are not true alternatives to the proposed Project, since the purpose of the Project is to increase the supply of renewable energy to the purchaser to meet its renewable, clean energy, or sustainability obligations. The Project is planned to connect to the Austin North substation in Mower county, Minnesota via an approximately 4.9-mile 161 kV transmission line. Access to transmission facilities beyond the point of interconnection will be arranged by the utility or utilities purchasing the Project's energy output and will depend on the buyer and the ultimate destination for the energy output. Thus, it is anticipated that the electricity generated will be transmitted via facilities owned or operated by others. For these reasons, Minnesota Rule 7849.0330 is not applicable, and Andyville respectfully requests an exemption.

K. Minnesota Rule 7849.0340: The Alternative of No Facility

Minn. R. 7849.0340 requires an applicant to submit data for the alternative of "no facility," including a discussion of the impact of this alternative on the applicant's generation and transmission facilities, system, and operations. The Rule also requires an analysis "of equipment and measures that may be used to reduce the environmental impact of the alternative of no facility."

Andyville does not have a "system," nor does it have other generation and transmission

facilities in Minnesota. As such, the requirements of this rule are not applicable to the Project and

are not necessary to determine need for the facility. Instead, Andyville proposes to submit data

reasonably available to it regarding the impact on the wholesale market of the "no facility"

alternative.

IV. **CONCLUSION**

Andyville has requested exemptions from certain data requirements on the grounds that, as

an independent power producer, such data are not reasonably available to Andyville, are

inapplicable to Andyville and the Project, and are not necessary to determine the need for the

Project. In lieu of certain specified data, Andyville will submit regional or state data that are

relevant to the Commission's determination on the need for the Project. The Commission has

granted similar exemption requests to independent power producers in the past, and Andyville

respectfully asks the Commission to grant its requests for exemptions from the CN data

requirements discussed above.
